READERS’ FEEDBACK....

The first three comments below are book reviews posted on amazon.com. The rest are excerpts of typical messages received by the author, Bill Henderson, over the last few months concerning the book “Cure Your Cancer.”

*Hope is not a fantasy when you read this*, July 18, 2003
Reviewer: Judith J. Rose from Newburg, Maryland, United States

Bill Henderson's book is a life saver (literally) for anyone with cancer or with a close loved one who is struggling to survive. Henderson's summary puts everything together that a diligent web-surfer would be able to find, on the subject of cancer survival. He limits his advice to the stuff you won't get from your doctor but you could get for yourself. This is what makes it so useful. He tells you where to buy stuff, and what to expect from using it. The hope alone makes this book worth 100 times its price!

*This book helped save my Mother’s life*, July 9, 2003
Reviewer: Peter Mita from Melbourne, Australia

With a whole world of information out there on the Internet about cancer it can leave you confused and feel like you are running around in a maze not knowing where to turn or what to believe. This book helped me get informed and ready to help my mother in just a few hours.

I found Bill Henderson's book to be an excellent overview of numerous natural treatments for cancer. He is not selling any product or promoting a single treatment method. Instead I found the book to be an extremely well written, intelligent, concise and to the point overview of many excellent natural cancer treatments. Also included are treatments that will help people already on chemotherapy.

The book allows you to track down more information about your favorite treatment by providing website addresses and suggests where you can get natural products at the cheapest prices (in the USA). It really helps the reader to be fully informed about ALL their options other than just surgery, radiation or chemotherapy.

The testimonials were very convincing and helped me to have the confidence to help my mother who was near death (suffering from advanced metastatic breast cancer that has spread to the liver, lungs, ovaries and bones) to keep taking dried barley greens. Within 2 days her
strong pain levels had improved. After 9 days she was COMPLETELY off all pain and nausea medication and in NO PAIN whatsoever. I am so thankful I read this book and became more informed about the many, well known, tried and proven natural treatments out there.

Thank you Bill Henderson.

Godsend  July 7, 2003
Reviewer:  Denzel Koh from Brisbane, Australia

I read Mr. Henderson’s e-book and it contributed tremendously to my daughter's recovery from liver cancer.

1. Soothing: He was the first to tell me that there is a cure. Not the professors, oncologists nor the liver specialists. And he is right!!!
2. Time: When you first discovered that your loved one has the dreadful disease, you don't know who to turn to .... Bill points the right path/way in double quick time.
3. Treatment: Yes, they are all there but you have to select them and fine-tune yourself as only you know best. Excellent explanations too.

If you love your stricken one, this is your 'Bible'.

I received it today and read the whole book tonight!!! It's GREAT!!!! I know I can help my husband beat his advanced prostate cancer!! I don't even feel terrified any more!!! Now I'm wondering if he should go thru the radiation therapy!!!?? I will order the MGN-3 and Beta Glucan right away as well as some of the other recommended items. I feel we have at least a 90-95% chance of getting rid of this cancer!!! THANK YOU!! THANK YOU!! THANK YOU!! I feel like WE are giving the orders now---not the cancer!!!!

Thanks, again for your very helpful book!

Clytis Engel
Valparaiso, Indiana

Bill, you do a great service. I have directed a number of people to you, and all of them say the same thing. "He does a real service". Keep going, Bill, and if I can help you any way, you have my e-mail address.

Herb
Dr. Herb Tabor
http://www.drtabor.healingamerica.com/
Bill, I'll be more than happy if you would add my daughter’s name to your survival stories. Her name is Christine Mazyrack. She is now 15 years old. She was diagnosed with Osteosarcoma in April, 1999 (was 12 years old at time of diagnosis). She underwent chemotherapy. The cancer came back to her lungs 2 years later. This is about the time that I learned about you and your book. I got her on the MGN-3 right away. She has now been cancer free for almost 2 years. She is doing GREAT, back in school and is now going for scans every 6 months.

Blanca Mazyrack, Houston, Texas

Hi Bill: Thanks much for your guidance and advice. You are doing a great deed for humanity. By way of recognition, I must report to you great results we had through your recommendations. Based on your advice we started using Dr. Budwig’s diet fo/cc + red raspberries, MGN-3, co-Q10, Wobenzyme. She had 4 treatments with chemo all the time complementing it with the above regimen. Today I’m happy to report that we did a full body PET/CT scan the results came back: A complete resolution in the left breast, no lymphatic involvement, an 80% reduction in the manubrium uptake. Quite dramatic to the amazement of my oncologist who told me he did recommend this regimen to other patients, even some of his family members. It also helped her to minimize the side effects of chemo. Throughout the whole time, she never missed a day of work except the day of the treatment.

Thanks a Million
Simon

Hi Bill, I am a nurse...I found your website by chance when a life long friend called me over a year ago to tell me he had liver cancer. The survival rate for this type of cancer is very poor. You were an answer to a prayer.

He started on MGN-3 right away and shared your book with his oncologist. His cancer went into remission within a couple of months and he is cancer free now. Thank you.

I share the information about your research. My own father died two years ago on January 16, 2001 of esophageal cancer that metastasized to his lungs. From the time his cancer was diagnosed until he died was less than two months. I only wish I had known about you and your book sooner.

I don't want others to lose their loved ones before their time if I can help by telling them about your book. May God bless you Bill. Thank you.
Faye Maier
North Carolina
Dear Bill, I want to thank YOU for all of the hard work and dedication that you’ve put into this labor of love!!! I truly appreciate all of this information Bill, and I consider it truly a blessing from God that I stumbled across the link to your website. My Mom has Acute Lymphocytic Leukemia, but she is currently in remission...I want to thank you from the bottom of my heart!

Natasha

Dear Mr. Henderson and readers:

My name is Dr. Tom. I have watched my significant other follow the advice of oncologists for over a year to find that their advice is ill conceived. I watched resident medical doctors follow their mentor, a head oncologist, into the blinded view of chemotherapy treatment for cancer patients. To watch this is clearly an eye opener on how brain washed medical doctors are. Like puppets following the puppet master into the show on stage. The horrifying truth of it all is that people trust and believe in these prescription drug pushers.

To understand the background of how corrupt the oncology system is, one must get the background of how corrupt the medical establishment is. The book Politics In Healing is a good read for starters. The largest, most traditional cancer treatment centers are the most criminal; and the young doctors are clueless to this being the case, since they are only told what they need to know to push the chemotherapeutic agents on cancer patients who later become the oncologists’ victims. Now that the media is starting to notice this, I will speak it more freely.

What the public doesn’t know is that the reason why some people get cured of cancer while on chemotherapy is not because chemotherapy works, but because alternative treatment works and chemotherapy slows down the curing and makes it more difficult for the alternative treatment to work. What I want to get across is that traditional medical treatment for cancer is worse than ineffective and that any change of lifestyle without chemotherapy would be more effective in reducing the cancer than chemotherapy.

Sincerely,

Dr. T.
Virginia, USA
Dear Mr. Henderson, I just want to extend a great big thank you for instilling hope in my heart when I thought there was none left. Your book has done that for me. I have all the confidence in what you have written and I don't even know you. I am telling everyone I know about your amazing book.

Stacy Antich, RN
Chicago, Illinois

Dear Bill, I've given away to family and friends about 25 of your books so far, many to cancer patients. I've received much positive feedback - people are so grateful to get the good news about non-toxic alternative cancer cures. Three or four apparently are in remission or at least feel that a cure is in process. I've also brainwashed everyone on enzyme therapy and MGN-3. I feel that you are doing some good work here - and I'm trying to help.

George Freaner (81-year old cancer survivor)
Virginia Beach, Virginia

Hi, Bill. Got a copy of your book not more than a week ago. I've been working on a dissertation for a second PhD on alternative therapy for cancer. I'm sure I will be quoting you (and giving credit where credit is due, of course) in my research. Your book is well written, makes no absurd promises, and indeed offers hope.

As a registered nurse, I have become increasingly disillusioned by the "miracle of modern medicine" in connection with the treatment of cancers. We have NOT improved the lives of anyone. Chemo and radiation patients usually succumb to another devastating illness because of the lack of immune response. The medical community fails to give these details to the patient.

Dr. Randy Walden, RN, Ph.D.

Mr. Henderson: I am very interested in artemesinin and congratulate you for, as usual, being at the cutting edge.

Jerome Wallach
Long Island, New York

Hi Bill, Went back for CT scans September 25th – exactly one year + one day from the day they told me I had Cancer in my stomach, lung and adrenal gland. Guess what!! Lung cancer is gone and the other two have not grown!!! Praise God! All this because my granddaughter found your site while looking for help. God does work in mysterious ways. I am still pain-free, thank God!!! And doing
well…I have you to thank for finding out about Protocol. I wish there was a way to tell the World!!! Thank you, again.

Libby

Dear Bill, Thank you for your excellent book. It is very informative and will help me in my search for the best combination of treatments there are for patients…the book is wonderful, informative and very accurate.

Dr. Dana Flavin-Koenig (cancer doctor)
Berg, Germany

I can never thank you enough for writing your book. I learned so much! I have such a better sense of how to help Dad now that I've read it. And I haven't even begun learning from all the other resources you list. Your book will be such a wonderful tool to help Dad know which direction to go and how to proceed.

You are also inspiring me to begin taking better care of myself. I used to work in the natural foods industry (importing macrobiotic foods from Japan), and it was easy to be tuned in to good health practices in that atmosphere. Now, in a mainstream, traditional environment, I have gotten extremely careless.

Gloria Gill
Seattle, Washington

I have purchased two of your books, Cure Your Cancer, and find them outstanding publications. There are no other books, or help, on the subject of Cancer out there to match, or even come close to yours. I truly hope you find a major publisher to help you. I really enjoy your newsletters and have forwarded them to many, many people.

God bless you.

J.M. Larmer, Naturopathic Doctor
New Jersey
Hi. My name is Bill Henderson. In November 1990, my former wife, Marjorie began her four-year bout with cancer. She died on November 1, 1994. Her many operations, chemotherapy treatments and intense pain made her wish often in her last two years for a quick death, or "transition," as she called it.

After watching that, it was hard for me to believe that millions of people each year had to endure that same torture. I have read widely since 1994, looking for options we were ignorant about. I have found many.

Realizing that millions of cancer patients needed this information to survive, I began what has become my full-time crusade. In books, newsletters and workshops, I have tried to reach as many people as I can with this life-saving message.

I spend every day talking by e-mail and telephone with cancer patients. I am not a doctor. I am just a “reporter.” However, with the information I have gathered, I have been able to help hundreds of people all over the world become cancer-free. The only thing I sell is this book. My newsletters and consultations are free.

In a previous e-book called “Cure Your Cancer,” I reached about 3,000 cancer patients in 49 countries. The paperback and hard cover version, published in June 2003 allowed me to reach thousands more who preferred that format. I have been interviewed on 35 radio shows. I have presented a dozen workshops around the country on “Beating Cancer – Gently.”
Now I want to help YOU. If this book can convince you how vital it is to take charge of your own health care, I will be satisfied. Because then becoming cancer-free is just a matter of time.

Once you have made that crucial decision to “become smarter than your oncologist,” there are literally hundreds of options – doctors, clinics, supplements, diet changes, detoxification methods – that will get you cancer-free. This book guides you to all of them.

The major difference between now and 1990-1994, when I was searching for information to help Marjorie, is the Internet. Now cancer patients have, as Hawaiians would say, a “tsunami” (“tidal wave” to us “haoles”) of information on over a hundred gentle, non-toxic treatments.

I have published 68 newsletters over the last four years with information on treating cancer I discovered along the way. Over 4,500 readers receive this free e-mail newsletter about twice a month. I have tried to incorporate all the useful information from the first 68 of these newsletters, including feedback from my readers, in this book.

In this book, you have the benefit of four years of feedback I have received from a vibrant network of doctors, nutritionists, cancer survivors and crusaders like me. People like Bob Davis, George Freaner, Art Brown, Gavin Phillips, Tony Preston, Dr. Mike Thompson, Dr. Ron Wheeler, Herb Horky, Ed VanOverloop, Dr. Tate of Doctor’s Second Opinion, Dr. Ross Hauser, Roger DeLong, Dr. Ralph Moss, Fred Eichhorn, Dr. Joseph Mercola, Dr. David Gregg, Dr. Richard Kinsolving, Dr. Loretta Lanphier, Ann Fonfa and many more have all helped explode my knowledge with their personal assistance.

Authors I have discovered since my first book was published include Daniel Haley and his wonderful book “Politics in Healing;” Jon Barron’s “Lessons From The Miracle Doctors;” Les Winick’s “The Reference Guide For Prostate Cancer,” Roger Mason’s “The Natural Prostate Cure,” Dr. Matthias Rath and his unique book “Cancer,” Patrick Quillin and his definitive book “Beating Cancer With Nutrition, ” Dr. Ralph Moss and his 13 books on cancer and Anne Frahm’s book “A Cancer Battle Plan.” There are many more who will be mentioned in this text, but you get the idea. The resources available to you are incredibly rich.

Finally, organizations and non-commercial websites abound now to help you in your quest for perfect health. They include: CancerTutor.com, AlternativeMedicine.com, The American College for Advancement in Medicine, The Life Extension Foundation; The National Foundation For Alternative Medicine; The Cancer Control Society; The Health Sciences Institute; The National Cancer Research Foundation; The Cancer Cure Foundation; People Against Cancer; The Foundation For The Advancement of Innovative Medicine;
Cancer Treatment Centers of America; Health Sciences Institute; and The Education Center For Prostate Cancer Patients.

I mention all of these only to impress you with the vast array of support available to you now. Believe me, nothing like this was available in 1994 when Marge and I needed it. Most of these people and organizations have web sites and newsletters that are extremely helpful in finding the right products and people to help you. Just like me, caring and not money motivates them.

My background is in computer software and marketing. After retiring from the U.S. Air Force as a Colonel in 1977, I founded a software company that sold specialized software to architects and engineers. It was the first of its kind in the world. We had clients in 42 states and 4 Canadian provinces. I sold that company in 1995.

In addition to my medical research and writing, I have tried several other Internet ventures. I have a Masters in Business Administration from George Washington University. I am an entrepreneur at heart.

This book, however, is a true labor of love. I know how much it can help you, if you will trust me and keep an open mind. I will be 73 in January 2005. My family and I have probably dealt with over 200 doctors and at least 10 of them have been close friends. I play golf twice a week with a pediatrician, who is my best friend. In the last 10 years, I have had several encounters with the medical system.

In 1992, I met Joe Davis, M.D. He started me on a workout plan that I have continued ever since. He also convinced me of the importance of proper nutrition. He founded several “fitness centers” called Ultra-Fit here in San Antonio. Bonus Booklet #2, “Stop Your Aging With Exercise,” will summarize Dr. Davis’ contribution to my current health.

In 1996, I had radial keratotomy done on one eye and laser correction on the other, which has allowed me to abandon the glasses I had worn all my life. I now wear glasses only for reading and computer work. In 1997, I had torn retinas repaired in both eyes. My vision is better now than ever before in my life. I had a hernia in my groin repaired very professionally in 1998. I had my sinuses cleaned out in 1999, which completely cured my chronic sinusitis. The doctor said she stopped counting when she got to 104 polyps removed.

Like most men my age, I have an enlarged prostate gland. Two urologists have treated me for the last 20 years. In the last fourteen years, they have done four biopsies on my prostate, all of which were negative.

I feel much better physically now in every way than I did forty years ago.
I mention my recent medical experience only to emphasize to you that I am anything but anti-doctor. Medical doctors serve a fine purpose in our society. If I had a medical crisis, I would trust any American doctor to give me the finest care possible. However, their view of the treatment of cancer and other degenerative diseases is obscured by the bias in our society caused by the huge amount of money and its influence wielded by the pharmaceutical companies (“Big Pharma”).

You have received with this “Cancer-Free” book four additional “booklets. Their titles are:

“Stop Your Aging With Diet”
“Stop Your Aging With Exercise”
“Beating Diabetes”
and “Cure Your Back Pain”

I have avoided using footnotes in this book. It is not a scholarly work for researchers. It is a “how-to” book for people with cancer or who have relatives or friends with cancer. The sources I have used can be found in Appendix A, along with a list of many other resources.

Before you read this book, I must give you the following warning and disclaimer:

_The author of this book is a researcher and writer, not a physician. The facts presented in the following pages are offered as information only, not medical advice. Their purpose is to create the basis for informed consent. Although there is much that each of us can do in the area of prevention, self-treatment for clinical cancer, diabetes and back problems is not advised. The administration of therapy for these maladies, including nutritional therapy, should be under the supervision of health-care professionals who are specialists in their fields._

CHAPTER 1

"Nature makes the cure; the doctor’s job is to aid nature.”
Hippocrates (400 B.C.)

INTRODUCTION – WINNING THE CANCER WAR

I am thrilled with the prospect of being able to help you treat your cancer or that of your loved one. In the four years I have been counseling people on how to cope with cancer, they have taught me that the only two reasons people die of cancer today are: 1] lack of information; and 2] blind trust in their doctors.

The word cancer in your diagnosis always creates fear. This is part of the culture we live in. The fear of disability and pain is actually greater than the fear of death. Let me tell you something you can absolutely rely on. No cancer diagnosis is a death notice.

In fact, by learning to “co-doctor” using the information in this book, your odds are quite high that you will obtain complete, permanent remission. This is not false hope. Your fate is truly in your hands – literally.

What is Co-doctoring?

Do you believe you have to co-doctor with your physician? So do I. Look at this as a “How To” book on co-doctoring. You, not your physician, are in charge of your health care. You, with his/her advice, make all the decisions. Sound scary? Insane? Please read on….

First, you must understand the causes of cancer. Then, you can intelligently evaluate treatment options. Sensible cancer treatment involves treating the causes, not just the symptoms.

But you can’t do this on your own. To treat cancer, you must be tested often to tell if the treatment is working. “Do it yourself” and you are almost certainly going to die of your cancer. Learn to co-doctor and you have a good chance to regain complete health.

In other words, if you think your oncologist (cancer doctor) has all the answers, then you are wasting your time reading this book.

Two Brief Examples
Let me tell you two brief anecdotes. A friend was hale and hearty for three full years, because she listened to me and took the natural substance (MGN-3) I bought for her. Before we started this treatment, she was nearly dead after over two years of chemotherapy for her metastasized breast cancer. She started on the MGN-3 I gave her in October 1998 and was well (according to her oncologist) by December 1998. She was fine for the next three years and did not continue to take it. She danced flamenco every Friday and Saturday night at a local Spanish bistro in addition to working 50 hours a week. Unfortunately, she continued to smoke. Her cancer returned in November 2001 and conventional treatment failed. She returned to her home in Spain and died in 2003.

Another gentleman with liver cancer in Atlanta, Georgia began taking the MGN-3 I recommend in July 2001 and shared this book with his oncologist. His cancer went into remission in a couple of months and he is cancer-free now. He is continuing to take the MGN-3.

Either of these people could be you or your loved one. Cancer treatments are available. They are non-toxic. They are made from natural substances. They do not destroy your quality of life. Instead, they rebuild your body's natural defenses. They work on almost all kinds of cancer. Of course, they will not work for long if you continue unhealthy lifestyle decisions like smoking and eating a “Standard American Diet” (SAD).

Why should you believe me? Well, first because I'm not selling anything (except this book). My newsletter service and counseling service is free. I get no income from any of the products or services I recommend. Second, because over 600 people who had active cancer (all types, all stages) when they discovered my book are living cancer-free today as a result of the information in my previous book and my newsletters. Why not you? And, finally, because your only other choice is to remain in “the system.” Very shortly, we will discuss the consequences of that.

Don’t Fire Your Doctor -- Yet

As an informed consumer of medical service, you will be empowered. When the doctor's advice tracks with your knowledge, you'll confidently accept his/her treatment. When you need to, you will intelligently opt to seek a second, third or fourth opinion.

Unless your doctor is constantly studying microbiology, neurology, endocrinology, nutrition, immunology, alternative medicine and lots more disciplines, he/she is not fully qualified to advise you on beating your cancer. No human being can read and evaluate all the information currently available.
Put yourself in your doctor’s shoes. She was trained in a medical school environment where drug companies provide most of the research grants and curriculum materials. Conventional (allopathic) medicine is taught to consist of treating “disease” and symptoms with synthetic drugs.

Once she is in practice, several drug company “representatives” every day bombard her, each leaving her free samples. A Health Maintenance Organization (HMO) is looking over her shoulder, criticizing every diagnosis, every test. Attorneys await her least slip or recommendation of “unusual” treatment, misdiagnosis or prescription of the wrong drug. She is more and more narrowly specialized. Even keeping up with the explosion of information in her own specialty is virtually impossible because of the demands of patient care on her time. Almost all of the new information she gets comes from “continuing education” sessions sponsored by a drug company.

With insurance companies and Medicare/Medicaid paying only a fraction of what she bills, she is under extreme economic pressure to keep patient “face-to-face” time to the bare minimum. One study showed that the average patient spends only two minutes with the doctor during each visit.

Is it any wonder that 51% of doctors in a recent large survey said they would not go into medicine again and 65% said they would not recommend it to their children as a career.

Even if they weren't so busy, there are very few doctors who understand the relations between lifestyle, environment and disease. The average M.D. received two hours (clock hours, not credit hours) on nutrition and preventive medicine in his six to ten years in medical school and hospital internship. Nutrition is a science at least as complex as conventional medicine.

You are fortunate that thousands of medical professionals have broken out of this “treat symptoms with synthetic chemicals by prescription” mold. Soon, I will show you how to find one of these wonderful people near you.

I'm not offering medical advice. I'm not qualified to do that. Nothing you read here should be accepted as medical opinion. However, I think I am qualified to offer you information you may be unaware of — information which will help you locate a better medical professional and cooperate better with that doctor to heal your or your loved one’s cancer.

Four Essentials
I have watched thousands of people battle cancer in the last thirteen years. Those who have been successful share four essentials. I call them the “4 A’s.” Memorize these and use them as a checklist frequently.

**Essential #1: Attitude**

Cancer is survivable. It doesn’t matter what “stage” or type of cancer. All cancer patients can overcome it and live out their normal lifespan. People who believe this with all their heart and soul get well. Those who doubt it don’t. It’s that simple. Really.

How do you get and keep a positive attitude? **Gain knowledge** about the wide variety of cancer survivors and how they survived. This is not a search for the “magic bullet” that cures all cancers. There is no such thing.

There are, however, literally hundreds of substances that are non-toxic and natural. Each one alone, or combined with others, has helped thousands of cancer patients get cancer-free. There are simple life style changes (diet, supplements, exercise, emotional peace) that restore health to cancer patients. Many of them are quite inexpensive or even free.

Believe the above paragraph and I can help you get well. Doubt it and I probably can’t. Your training from childhood that doctors have the answers may make it hard for you to accept this. It takes courage.

While I have been able to help hundreds of people around the world overcome their cancer, several friends and family members have succumbed to cancer during this same four years. There is a saying that “There is no prophet in his own home town.” When people I am close to do not follow my advice, it is painful and difficult for me to accept. However, the joy of hearing from one cancer survivor who has profited from my information inspires me to continue.

Keep an open mind. **Accept controversy** as a normal part of any treatment plan. Be strong. Family and friends are well meaning, but after a few hours of the research you have now started, they will know far less than you about cancer.

**Essential #2: Advocate**

If you have been diagnosed with cancer, you need to find your closest friend or relative and ask them to be your advocate. Cancer evokes emotions in almost everyone that are hard to deal with. Fear may freeze you. You are quickly exposed to confusing terms and advice of all types from well-meaning sources.
By reading this book, you are preparing yourself to **do battle** with the cancer “system.” This battle is sometimes **difficult and stressful**. The path you are choosing is controversial. You need help and “moral” support.

You are going to need to do **research** to find the information and resources (doctors, clinics, supplements, etc.) you need. This research **does not** require a **great deal of time**, using this book as a guide to the information available on the Internet. We’re talking about the equivalent of **3 or 4 ten-hour days** to become “smarter than your oncologist.” Most cancer patients do not have either the **energy or patience** to devote this much time to getting “up to speed.”

Your advocate needs to accompany you to **every** doctor’s appointment. He or she must be committed to your recovery and have a **good sense of humor**. He or she must be willing to **discuss options with your doctor** and help you choose a second, third or fourth opinion doctor, if necessary.

**A Quick Intro**

If you don’t believe my estimate of the time needed to “get smart,” take a **half hour right now** and study this web site. You can e-mail or call the author of this site, Robert Harrison, with questions about his information. All of it **tracks exactly with my research** of the last several years. As he says, “**Current cancer treatments seem to make no sense once you understand the basics of cancer.**” Here’s the web site.

If you looked at the order form for the supplements Robert Harrison is recommending, you found they **were not cheap**. None of them are covered by any insurance. I will help you find the cheapest sources for the substances and services you need and even some covered by insurance. But, inevitably, you must face the question “**How valuable is your recovery from cancer to you?**”

[Incidentally, none of the substances or other resources mentioned in this book result in **one dime of income** for me. I must keep it that way to maintain my own integrity and, more importantly, your confidence in my sincerity.]

Here’s another website which will quickly build your understanding of cancer treatment. This one takes **about an hour** to read, but it is well worth it. It is a non-commercial site – i. e. it is not selling anything, just giving you information.

[http://cancertutor.com](http://cancertutor.com)
In summary, when your friend or loved one who is a cancer patient asks you to be their advocate, accept gratefully. There is no more spiritually fulfilling and uplifting role in this world. Your service will quite possibly save your relative or loved one’s life. It most certainly will help him or her avoid the drastic damage done to their lifestyle and well being by the cancer “system.”

Essential #3: Assistance (The Right Medical Professional)

This book will feature knowledge from many M.D.s. All of them have broken the mold of the doctor who is concerned only with treating symptoms and managing disease. They have done unique research resulting in breakthrough knowledge about understanding the causes of cancer and treatments that work to reverse it at the cellular level. They are also concerned about prevention.

To help you understand what I mean, I will give you two examples.

First, Dr. Matthias Rath is a German M.D. who has gained worldwide recognition for his unique documentation of the cause of cancer metastasis (spreading of cancer cells to other parts of the body). He discovered and published this in the mid-1980’s jointly with Linus Pauling, Ph.D., the famous physicist and winner of two Nobel prizes. Products based on their research are now readily available and are effective in preventing metastasis, the cause of 90% of cancer deaths.

Dr. Rath treats cancer of all types and stages (as well as heart disease and AIDS) using Vitamin C and two specific amino acids (L-lysine and L-proline). He and his research VP travel all over the United States and Europe giving seminars on this subject (and, yes, selling his supplements at exorbitant prices). I have discovered a much cheaper source, which I will tell you about in Chapter 5. For a free 8-page “pdf” booklet that explains his theory, just go to:

For the second example, listen to Harold W. Harper, M.D. in a quote from his book “How You Can Beat The Killer Diseases:”

“What if cancer is a systemic, chronic, metabolic disease of which lumps and bumps constitute only symptoms? Will this not mean that billions of dollars have been misspent and that the basic premises on which cancer treatment and research are grounded are wrong? Of course it will, and in decades to come a perplexed future generation will look back in amazement on how current medicine approached cancer with the cobalt machine, the surgical knife, and the
introduction of poisons into the system and wonder if such brutality really occurred.”

**How Do YOU Find One?**

You would not have read this far unless you were interested in the help available from alternative, complementary or integrative medicine. So, how do you find a competent medical professional sympathetic to this approach to treat you in your area? Fortunately, it is not difficult any more. Even folks in remote areas can usually find someone within 100 miles or so of their home. I have done it personally and helped many others, so I know exactly what is involved.

**My Personal Experience**

A couple of years ago, I decided to “walk the walk.” I had been recommending to hundreds of cancer patients for two years that they find a qualified medical professional sympathetic to Complementary & Alternative Medicine (CAM). I decided to find one that I could put my trust in for myself.

I called a unique “holistic” dentist here in San Antonio who had treated my wife for her problems with root canals. I asked his wife, whom we had gotten to know because she worked in his office “Who would you go to in San Antonio if you were looking for a ‘holistic healer?’” She gave me four names. Two were osteopaths, one a naturopath and one a nutritionist. A friend of ours, who is also a nutritionist, had recommended one of the same osteopaths when I asked her the same question.

I interviewed all four of them -- three by telephone and e-mail and one in person. Among the questions I asked them were:

“Do you treat prostate cancer?” Substitute your type of cancer. The answer you want is “Yes.”

“I take a lot of supplements. How do you feel about that?” The answer you want is “That is fine,” not “Don’t waste your money. Just eat a balanced diet.”

“I feel you should help me, but that I am in charge of my own health. Is that consistent with your approach?” The answer you want is, of course, an enthusiastic “Yes.”

“How long have you been in practice?” Listen closely for the type of experience he/she has. Try to go into detail about previous practice sites, etc. in your interview. The value of his/her experience is strictly a judgment call on your part.
“Would you be willing to give me the names of three of your patients who would be willing to talk to me?” The answer you want is something like “If they agree after I call them, I’ll be happy to give you their names.”

The one I interviewed in person, as you might have guessed, was the osteopath recommended by both friends. He accepts Medicare. The others did not. He did not charge me for this initial interview, which lasted 40 minutes. He gave me all the right answers and we found we had a lot in common (military service, belief in alternative medicine, etc.). It was the first time in my life that I had spent that long talking to any medical professional about health matters.

I have designated him as my Primary Care Physician. He treats cancer, along with all other medical problems, using both alternative and conventional means. In fact, he says he “treats people, not disease.”

Your quest may not be as easy or rewarding as mine. But start with your personal network of friends and people in the medical profession – nurses, doctors, dentists, nutritionists, owners of health food stores, etc. Once you have exhausted that resource, go to one of the following websites and search for people in your area. It won’t take you very long.

**Using The Internet**

Keep in mind, some alternative therapists may not be allowed to treat cancer depending upon the laws and politics of their country, region, state, province, etc.

For some excellent advice on choosing and working with a practitioner right for you, you may want to read the following article:

Now here are some website directories of what I call “holistic” physicians. Don’t give up until you find the one who is right for you. This is a very personal decision that nobody can make for you.

www.acam.org. The American College for Advancement In Medicine. This fine organization deserves special attention. Use their “Find A Doctor” link. You will find a searchable database of alternative practitioners. Call the ones near you and discuss your situation. They may know other therapists near you offering a specific treatment you may want -- detoxification, for example. My osteopath (see above) is the only member in San Antonio.

www.alternativemedicine.com Use their “Find A Practitioner” link to find the health care professionals in your area. You can search by zip code or State. You can specify either the “health concern” (e.g. cancer) or the “therapy” (e.g. detoxification).
orthomolecular medicine). Phone (800) 515-4325, ext 222 for assistance. Burton Goldberg, this organization’s founder, is one of the world’s leaders in advocating Freedom of Choice in health matters for doctors and patients alike.

www.lef.org/doctor/doctors.html. Here is a list of progressive doctors in all States in the U.S. and many other countries compiled by the Life Extension Foundation (LEF). As in the ACAM site above, these are generally open-minded individuals who understand and believe in alternative therapies.

www.naturopathic.org This is the website of the American Association of Naturopathic Physicians. It has a database searchable by zip code. This rapidly growing health care discipline seeks to discover the underlying cause of a disease and treat that rather than just eliminate symptoms, the approach used by the conventional medical establishment. Some states today, specifically Alaska, Arizona, Connecticut, Hawaii, Maine, Montana, New Hampshire, Oregon, Utah, Vermont, and Washington, license Naturopathic Doctors on a par with MDs. There is a member of this organization about three miles from my home. I would probably consult him if I were diagnosed with cancer.

www.cancure.org An excellent site with many alternative doctors, hospitals and clinics from around the world. Put this website on your “favorites” list and come back to it to explore its cornucopia of information.

www.geocities.com/ray_m_89119/clinics.html Many, many links to alternative health websites, including many clinics in the U.S., Mexico and Germany.

www.homeopathic.org/find.htm At this site you will find some good guidance on selection of a homeopathic physician and a searchable database listing naturopaths, MDs, and other practitioners who use homeopathy. Again, they may or may not be able to treat cancer depending on the legalities in their state. Homeopathy has been very popular in Europe for decades. England’s Queen Elizabeth uses a homeopathic doctor.

www.holisticmedicine.org American Holistic Medical Association. Under the “Public” link on the left is some guidance on finding a physician and a searchable database of members of this organization.

www.nfam.org National Foundation for Alternative Medicine. This is an organization dedicated to information on the best alternative and conventional cancer treatments and facilities worldwide. A former American congressman named Berkeley Bedell, who was cured of both lyme disease and prostate cancer by alternative means after his conventional doctors gave up on him, started it. Look under the “Treatment” link for information on clinics.
www.whale.to/cancer/doctors.html. An outdated list of doctors and clinics that may give you some leads. It is not organized in any way.

Above all, don’t give up. The truth is that there is a medical professional that will treat you and respect your wishes regarding alternative, complementary or integrative medicine. All you have to do is find him or her.

**Essential #4 – Action**

Now for Essential #4. You **must start** treating yourself. Don’t wait until you find a great CAM professional. While you’re searching for him or her, start taking supplements that are inexpensive, help any cancer and make it easier for you to regain your health. Change your diet using the guidelines in Chapter 4. Time is more important to you now than at any time in your life. Untreated cancer does not stop spreading. You must begin your battle **NOW**.

Beware! Many oncologists will insist that supplements interfere with the effects of chemotherapy. If you hear this, you know it is **time for a second opinion**. Many studies have shown that this is **just not true**. As you can tell by now, I don’t recommend either chemotherapy or radiation to treat cancer. However, that choice is yours to make. However, rebuilding your immune system before, during and after this type of treatment is **not a choice**. It is **essential**, if you want to survive the cancer.

In Chapter 4, I will show you a method using the same chemotherapy drugs your oncologist uses, but in a very **low-dose** form that causes none of the side effects of normal chemo. Called **IPT**, this is definitely one of the treatments about which you want to “**get smarter than your oncologist**.”

In summary, you need to keep in mind the four “A’s.”

- **A Positive** Attitude
- **An Advocate**
- **Assistance** (from A Competent CAM Professional)
- **Action** (Get Truckin’)

In Chapters 5 and 6, I will discuss most of the available CAM cancer treatments in some detail. For now, I would like to help you understand two essentials for you to win your battle: 1) The cancer “environment” you are in; and 2) The true cause of cancer.
 CHAPTER 2

“Most people would rather die than think. In fact they do.”
Ralph Waldo Emerson

THE CANCER ENVIRONMENT

“Unproven Remedies”

In the past 70 years, at least 120 successful treatments for cancer have been discovered. You will find information on most of these in Chapters 5 and 6. Would it surprise you to know that every one of these 120 is currently on the “Unproven Remedies” list maintained by the American Cancer Society (ACS)?

Doesn’t it seem logical that at least one of these would have been thoroughly researched and investigated and found to have some use for at least some cancer sufferers? Isn’t it mind-boggling that every single one is still labeled “unproven,” in spite of the lapse of decades since their discovery?

But it’s worse. Not only has our cancer “system” failed to prove and endorse these cures, the discoverers (most of them reputable M.D.s and researchers) have been hounded with lawsuits, license suspension and even jail sentences for treating cancer patients. Many have been driven out of the country or into seclusion or even to suicide.

What do these cures have in common? They are not approved by the FDA for treatment of any “disease” and cannot be marketed as such. All contain natural, not synthetic, substances. Some have been patented, just like the pharmaceutical drugs. But they have not been through the “clinical” trial process, which, as we’ll see, is largely bogus.

And yet, the U.S. alone has spent thousands of man-years and over one hundred billion dollars of government (your) money on cancer research just since the “War on Cancer” began in 1971. Cancer deaths per 100,000 people in the U.S., adjusted for age and population growth, are much higher today than in 1971.

Drug Company $$$$  

You can only understand the cancer treatment “system” in this country and, to a greater or lesser degree, in other countries, if you understand how much power
the drug companies wield in our culture. Drugs used in cancer treatment are all produced and sold as “chemotherapy.” What this means is that synthetic drugs must be compounded, and run through years (typically about 10 years) of testing. This process costs between $200 million and $500 million.

Gene therapy and immune system vaccines have been researched for many years. They too must be tested through this enormously expensive system. There are lots of natural immune system boosters that are effective in fighting cancer. U.S. law prohibits them from being advertised as treatment for cancer or any other “disease.”

Why not let “natural” remedies co-exist so people can make their own choices? That would seem logical, but there are Federal and State laws in the United States and other countries that prohibit this. Currently, under U.S. Federal law, no natural substance can be advertised as a cure for any condition – period. Companies that get too successful with cancer treatment are shut down by FDA lawsuits.

An Abominable Example

On July 12th, 2004, Lane Labs (MGN-3, SkinAnswer, Shark Cartilage) was not only ordered to shut down, but to reimburse all purchasers of their products since 1999 by a Federal judge in New Jersey. Lane Labs, in the five years since the FDA began hounding them, had grown into a $30 million per year company. Their products had healed cancer of all types for dozens of my readers.

Drug Cartel Takes Over Europe

This UN Commission had the innocuous goal of standardizing food production standards in all UN countries. In 1995, Big Pharma succeeded in getting the umbrella of this Commission expanded by the UN to cover food supplements. Now, with several drug company executives in influential positions in the EU Parliament, they have essentially “passed a law against prevention.”

One German doctor, Dr. Matthias Rath (see above), claims to have collected 604 million signatures on a petition to block this “Directive.” It passed anyway.

The effect is to make 300 food supplements -- including chromium picolinate, yeast, lysine and selenium – illegal for over-the-counter sale. Other
supplements that remain in stores will contain very low dosages. For example, the highest dose of Vitamin C available without a prescription will be 60 mg. For me to take my 3 grams a day, I’d have to take 50 tablets instead of the three I take now.

The EU Directive grants a transition period of three years for vitamin supplements already on the market. But in 2005, every EU country (all 15) will be required to implement this directive. One of my newsletter readers in Holland told me in the summer of 2002 that it had already been fully implemented in her country.

For an interesting article from London’s Guardian, go to this web site:

http://www.cat007.com/guardian.htm

Is It Coming To The U.S.?

There are rumors that the FDA is attempting to implement the same restrictions in the U.S. This despite the Dietary Supplement and Health Education Act (DSHEA) passed by Congress in 1994 to head off the last attempted power grab of this nature by the FDA. The DSHEA classifies supplements as food and allows manufacturers to inform the public about how supplements affect the “structure and function” of the body. The FDA, of course, has put many restrictions on this in the ensuing years. In fact, Lane Labs (see above) felt they were following the provisions of this law to the letter. Obviously, they got way too successful and Big Pharma pressured the FDA to shut them down.

Drug Marketing

The marketing of toxic drugs lies at the heart of the “war on cancer.” For example, in one study, the cost of drugs was 55 percent of total treatment cost for small-cell lung cancer.

An article in the Journal of the American Medical Association (JAMA) recently stated that oncologists (cancer doctors) make an average of $253,000 a year, of which 75% is profit from chemotherapy drugs administered in their offices.

If you have any doubts about the drug company omnipresence in our lives, all you have to do these days is turn on your TV. It seems like every other commercial is for some prescription drug. What’s going on here?

In 1997, it became legal for the first time for drug companies to plug their wares directly to the consumer (you and me). In those 7 + years, the spending on TV and print advertising by Big Pharma has ballooned.
Would you believe that in 2001 alone, the drug companies spent $15.7 billion (with a "b") on TV and print ads for prescription drugs? This is more than any other industry spends on advertising. More than the auto industry, the housing industry, retail giants like WalMart and so on.

Why? Well, it’s pretty obvious. The brainwashing of the U.S. public continues. Got a problem? A prescription from your doctor is all you need to fix it. No need to worry about all those goody-two-shoes urging you to eat sensibly and exercise. Just jot down the latest name for a drug that just cost Bristol-Myers-Squibb or Merck $500 million to bring to market and go bug your doctor to write you a prescription for it.

Just as important as the hype it gives their products is the incredible clout this spending gives the drug companies with the media. Why else would the media conveniently fail to note the unpleasant or even lethal side effects of prescription pharmaceuticals? These side effects are the fourth leading cause of death in the United States – right behind heart disease, cancer and stroke.

The U.S. spent 1.5 TRILLION DOLLARS for health care in 2002. You might think most of this money went for hospital care.

Wrong!

Americans have spent more on prescription drugs than hospital care for the last several years. About two-thirds of this is wasted on drugs that only treat symptoms and allow the person to deteriorate without addressing the underlying cause of his/her disease.

**Insane Profits**

Are the drug companies crazy to spend $500 million to develop a drug? Crazy like a fox! Here is just one example. AstraZeneca is a drug company you have probably never heard of. According to Forbes magazine (March 18, 2002), they are the world's fourth-largest pharmaceutical company.

IN 2001 ALONE, AstraZeneca made $630 million on the sale of Nolvadex (a.k.a. tamoxifen), a breast cancer drug. This drug has been on the market since 1973. They made $728 million on the sale of Zoladex, a prostate/breast cancer drug. It was introduced in 1987. They made another $569 million on Casodex, another prostate cancer drug introduced in 1995. Within two years, says Forbes, this company’s sales of cancer fighter drugs alone will top $2.5 billion a year.
One company, Bristol-Myers-Squibb, spends more than **one billion dollars** per year on research and employs 4,000 scientists and support personnel. It holds patents on **more than a dozen drugs** approved by the FDA for the treatment of cancer; this accounts for **almost half** of the chemotherapy sales in the world.

**Influence – Far And Wide**

Bristol-Myers-Squibb also **creatively influences** cancer research. It gives out awards, lectures and grants of many kinds. It pays for updates to orthodox cancer textbooks, and **supports research and “data management”** of clinical studies on its patented agents. Other cancer drug companies do the same.

Memorial Sloan-Kettering Cancer Center (MSKCC) in New York City is at the forefront of cancer research and has been for **at least the last 30 years**. Drug companies, again with Bristol-Myers-Squibb leading the way, occupy a **very strong position** at Memorial Sloan-Kettering. At one time, in 1995, for example:

- **James D. Robinson III**, the Chairman of the MSKCC **Board of Overseers and Managers**, was a **director of Bristol-Myers Squibb**.
- **Richard L. Gelb**, Vice-Chairman of the MSKCC board, was **chairman of the board of Bristol-Myers Squibb**.
- **Richard M. Furland**, MSKCC board member, retired in 1994 as the **president of Bristol-Myers Squibb**. He has also been a director of the Pharmaceutical Manufacturers Association.
- **Benno C. Schmidt**, Honorary co-chairman of MSKCC, was the **founder and board member of Genetics Institute**, a Massachusetts-based company that manufactures drugs for the cancer marketplace. He was also a **director of Gilead Sciences (which makes cancer-related drugs); Matrix and Vertex Pharmaceuticals**. He received the Bristol-Myers Squibb Award for distinguished service to cancer research in 1979.
- **Paul A. Marks**, M.D., the President and CEO of MSKCC, was a **director of Pfizer**, which manufactures cancer-related drugs. He was also on the board of National Health Labs and of Life Technologies.

**FDA – The Federal Watchdog?**

Well, what about the federal government bureaucracy responsible for protecting you and me from such greed-oriented businesses, the Food and Drug
Administration (FDA). Sorry, folks. This agency is even more **corrupted by drug money** than the EU Parliament.

One study recently showed that **55% of FDA executives** go to work for pharmaceutical companies when they leave the FDA. 20% of the FDA employees who work on the drug approval process are actually paid by the drug companies. Would you think they would be completely objective? Hmmmm.

In May, 2001, the Los Angeles Times published an article by David Willman entitled **“New FDA Policy Resulted in Seven Deadly Drugs.”** He described how easier FDA standards on drug approval were prescribed by Congress in 1993. After a two-year investigation, the L.A. Times reported that in “adverse event” reports filed with the FDA, the **seven drugs** were cited as suspects in **1,002 deaths**. Because the deaths are reported by doctors, hospitals and others on a **voluntary basis**, the true number of deaths **could be much higher**, according to epidemiologists.

The seven drugs – Lotronex, Rezulin, Posicor, Redux, Rotashield, Propulsid and Raxar – are among the **hundreds of new drugs** approved by the FDA since 1993. A telling statistic: these seven drugs alone generated **$5 billion** in U.S. sales **before they were pulled from the market** by the FDA. Another interesting statistic: In 1988, **only 4%** of the new drugs introduced into the world market were approved first by the FDA. In 1998, the FDA’s first-in-the-world approvals had **spiked to 66%!**

Once the world’s safety leader, the FDA was the **last to withdraw** several new drugs in the late 1990s that were banned by health authorities in Europe.

**Doctors Comment On The FDA**

“**This track record is totally unacceptable,**” said Dr. Curt Furberg, a professor of public health sciences at Wake Forest University. “**The patients are the ones paying the price. They’re the ones developing all the side effects, fatal and non-fatal. Someone has to speak for them.**”

It’s not that doctors didn’t speak up against these drugs. “**They’ve lost their compass and they forget who it is that they are ultimately serving,**” said Dr. Lemuel Moye, a University of Texas School of Public Health physician who served from 1995 to 1999 on an **FDA advisory committee**. “**Unfortunately, the public pays for this, because the public believes that the FDA is watching the door, that they are the sentry.**”

The FDA’s shift is felt directly in the private practice of medicine, said Dr. William Isley, a Kansas City, Missouri diabetes specialist. He implored the agency to
reassess Rezulin four years ago after a patient he treated suffered liver failure taking the pill.

“FDA used to serve a purpose,” Isley said. “A doctor could feel sure that a drug he was prescribing was as safe as possible. Now you wonder what kind of evaluation has been done, and what’s been swept under the rug.”

“The Truth About The Drug Companies”

In August 2004, Dr. Marcia Angell (an M.D.) published a very interesting book. It is entitled “The Truth About The Drug Companies : How They Deceive Us and What To Do About It.” Dr. Angell’s perspective is particularly interesting because for 20 years before her retirement in 2000, she was executive editor and editor-in-chief of the New England Journal of Medicine, one of the most prestigious medical journals in the world. Under her watch, the journal published hundreds of studies of new drugs. It also published blunt editorials harshly critical of the pharmaceutical industry and the way drugs are tested and approved in the United States. She makes several major points, in an interview published in the Los Angeles Times, which are critical for you to understand:

- “Drugs are expensive, but not because of the costs of research. The money the largest drug companies spend on marketing and the amount of profit they make dwarfs their research expenditures. In 2002, for example, the biggest drug companies spent only about 14% of sales on research and development and 31% on what most of them call ‘marketing and administration.’ They consistently make more in profits than they spend on R & D. And their profits are immense. In 2002, the combined profits of the 10 drug companies in the Fortune 500 were $35.9 billion. That’s more than the profits of the other 490 businesses put together, if you subtract losses from gains.”

- “…the number of truly innovative new drugs is quite small. True, many drugs are coming to market. But most of them aren’t new at all. They are minor variations of best-selling drugs that are already on the market.”

- “Drug makers are only required to show that a new medication is more effective than a placebo, or sugar pill. If a drug works better than a placebo and is safe, the FDA approves it, and it can enter the market. The result is that doctors don’t know if a new drug that comes along is any better or worse than the drugs they’re already using.”

- “…patents run out on older drugs and they can then be sold as generics at as little as 20% of the price (they sold at while still under
patent). Pharmaceutical manufacturers need a constant supply of new drugs that have patent protection so they can charge whatever they want.”

✓ “...why are drug companies spending so much on marketing? The answer is that they have to convince us that their me-too drugs are better than the others. And that takes a heap of marketing, because there’s usually no scientific evidence to back up the claim.”

The FDA Responds

The FDA’s response: “All drugs have risks; most of them have serious risks,” said Dr. Janet Woodcock, director of the FDA’s drug-review center. “Once a drug is proven effective and safe” [in the case of chemotherapy drugs, half the test subjects survive it!], Woodcock says, “the FDA depends on doctors to take into account the risks, to read the label...We have to rely on the practitioner community to be the learned intermediary. That’s why drugs are prescription drugs.”

Dr. Woodcock alluded in a recent interview to the difficulty she feels in rejecting a proposed drug that might have cost a company $150 million or more to develop.

The “Bottom Line”

Dr. Woodcock, how many people have you heard of who have been killed by an overdose of Vitamin C or by eating too many vegetables?

Question All Medications

Do you see how important it is to “second guess” your doctor? Question everything. If you or your loved one are being prescribed a medication [especially chemotherapy], ALWAYS ask to see the statistical studies and warning labels which are required to be read by physicians. Obviously, they don’t have the time to study them all. You MUST take the time. Your life or your loved one’s life may be in danger.

Suppression of Competition

The logical question is “Why does the FDA and the EU go to such lengths to suppress non-toxic treatments for cancer and other diseases?” The only answer is that our medical system, in the U.S., Europe, Australia and other countries has become dominated by drug company money.
Conspiracy?

The true nature of the Big Pharma influence on governmental and private agencies can only be appreciated with a lot more detail than I can provide you here. The best way to appreciate this problem I know of is to read a book called “Politics in Healing – The suppression and manipulation of American Medicine” by Daniel Haley. It was published in 2000 and is available from amazon.com.

Haley has documented 11 case studies of systematic suppression of proven cures – mostly for cancer. Substances like Glyoxilide, Krebiozen, DMSO, Colustrum, Hydrazine Sulfate, 714X, Aloe Vera and Cesium Chloride are covered in great detail along with names like Royal Rife, Harry Hoxsey, Dr. William Koch, Dr. Andrew Ivy, Gaston Naessens, Dr. Robert Becker and Dr. Stanislaw Burzynski.

Here’s what Julian Whitaker, M.D., prominent leader in alternative medicine says about this book:

“Daniel Haley has written a very important book about the medical profession, detailing the struggles between good and evil as no one ever has before. Incredible as these stories are, they are true!”

The suppression Daniel Haley documents has been an obvious conspiracy among the American Medical Association (AMA), the American Cancer Society (ACS), the National Institutes of Health (NIH), the FDA and the Federal Trade Commission (FTC) to serve the Big Pharma cartel.

This is not an easy book to read. As I finished each chapter at night, I would grumble to my wife about the evils of big money corruption in our country and the millions of people dying needlessly because of it. Nevertheless, it should be required reading, at least for every American, European and Australian.

If you are in a hurry to discover the best ways to treat your or your loved ones cancer, I will forgive you if you put off reading this book. However, when you get the time, please come back to it. You will never look on our medical or political systems the same way again. In the meantime, if you must press on, please take my word for the need for you to exercise great caution in accepting anything you hear from our “conventional” (or “allopathic”) medicine system without confirmation from several sources outside that system.

Should We Blame The Doctors?
Is your doctor a part of this conspiracy? No. Most doctors are dedicated, over-worked, even heroic champions of the restoration of their patients’ health. Unfortunately for you, they are products of a medical system that is closed to innovation in very important ways. Most do not even consider treatments that do not fit the mold they have been taught in medical school and in all “continuing education” since. In fact, most of the “continuing education” of doctors is done on junkets to exotic destinations sponsored by the drug companies.

What is the current medical dogma on cancer by which oncologists live? First, that cancer is a foreign enemy in the body that must be attacked. The only acceptable treatment is to cut it out, poison it or burn it. Second, that all patented synthetic drugs (chemotherapy, etc.) approved for them to prescribe are superior to any natural, non-toxic substance for cancer therapy. And finally, that food supplements are a waste of money for those who eat a “balanced diet.” These three “wrong paradigms” almost insure that you will need to question their judgment.

Please don’t just accept or reject my views on this. Check out some information from real experts. One example is the following article. The authors, Nicholas Regush, an experienced health reporter for ABC News and Dr. Joseph Mercola, one of the best-qualified medical professionals I have ever encountered, are certainly not radical revolutionaries. Their views are important to you, however, because you need to understand what you are up against in your use of our conventional medical system. Please read this article:

The Cancer Industry

In his interesting book World Without Cancer – The Story of Vitamin B17, G. Edward Griffin puts it this way:

“With billions of dollars spent each year in research, with additional billions taken in from the cancer-related sale of drugs, and with vote-hungry politicians promising ever-increasing government programs, we find that, today, there are more people making a living from cancer than dying from it. If the riddle were to be solved by a simple vitamin, this gigantic commercial and political industry could be wiped out overnight. The result is that the science of cancer therapy is not nearly as complicated as the politics of cancer therapy.”

Legislation claiming to protect the consumer of drugs is usually written by the drug industry. Politicians who are grateful for the financial support of the drug companies are eager to put their names on legislation and push for its enactment. Once it becomes law, it serves merely to protect the sponsoring
drug companies against competition. Competition from natural cancer cures, for example. The consumer is the victim of this legislation, not the beneficiary.

In drug testing and marketing, unlike other industries that lobby Congress, there is the added necessity to pretend that everything is being done scientifically. Therefore, in addition to recruiting the aid of politicians, scientists must also be enlisted – a feat that is easily accomplished by the judicious allocation of funding for research.

Some History

This process is nothing new. Former FDA Commissioner James L. Goddard, in a 1966 speech before the Pharmaceutical Manufacturers Association, expressed concern about dishonesty in testing new drugs. He said:

“I have been shocked at the materials that come in. In addition to the problem of quality, there is the problem of dishonesty in the investigational new drug usage. I will admit there are gray areas in the IND [Investigation of New Drug] situation, but the conscious withholding of unfavorable animal clinical data is not a gray area. The deliberate choice of clinical investigators known to be more concerned about industry friendships than in developing good data is not a gray area.”

Goddard’s successor at the FDA was Dr. Herbert Ley. In 1969, he testified before the Senate committee and described several cases of blatant dishonesty in drug testing. One case involved an assistant professor of medicine who had tested 24 drugs for 9 different companies. Dr. Ley said:

“Patients who died while on clinical trials were not reported to the sponsor… Dead people were listed as subjects of testing. People reported as subjects of testing were not in the hospital at the time of the tests. Patient consent forms bore dates indicating they were signed after the subjects died.”

Another case involved a commercial drug-testing firm that had worked on 82 drugs from 28 companies. Dr. Ley continued:

“Patients who died, left the hospital, or dropped out of the study were replaced by other patients in the tests without notification in the records. Forty-one patients reported as participating in studies were dead or not in the hospital during the studies… Record-keeping, supervision and observation of the patients in general were grossly inadequate.”

Money corrupts. Really big money corrupts completely!!
The Lancet Nails Drug Company Research

For a view on this subject from an impeccable source, I suggest you read a recent article from The Lancet, the esteemed British medical journal. It covers research funded by drug companies and was posted by Dr. Joseph Mercola in his great newsletter. You can read the article and Dr. Mercola’s comments on it at:

While you are there, sign up for Dr. Mercola's newsletter. It is a treasure trove of health information delivered weekly to your e-mail box. It's free.

A Personal Anecdote

About 6 years ago, my urologist prescribed Hytrin, a drug manufactured by Abbott Laboratories, for my enlarged prostate. It was quite effective in reducing my nocturnal ups and downs. It relaxes the prostate and bladder muscles. Hytrin is also used to treat high blood pressure, which I don't have.

For the first three and a half years, my co-payment for Hytrin was $60. I needed a refill about once a month. When I asked the pharmacist if there was a generic, he said no, that Abbott Labs had a patent on it and only the named drug could be sold.

Well, guess what? In the middle of 2000, I happily found that Abbott Labs patent had expired. I found out only because my pharmacist filled my prescription with the generic (terazosin hydrochloride) and my co-payment was $5, instead of $60.

The plot thickens. In September 2000, I received a letter from my urologist's office. They were running a clinical trial on a "new" drug to treat enlarged prostates and they wanted volunteers for the test. I was curious, so I called them. It turned out that this office, the largest urology clinic in San Antonio, had a specialized staff for drug testing.

They asked me a few questions. Apparently, I qualified and they asked me to participate in the test -- what's called a Random Clinical Trial. It requires the participants to take no medication (stop the terazosin) for one month and then try the "new" medication for three months -- unless, of course, you got the placebo (sugar pill), which neither you nor the docs would know about. One half of the people would get the "new" drug and one half the placebo.

Guess what the "new" drug was? Not hard, was it. It was Hytrin II. A "new", and, of course, newly patented form of the drug. It was supposed to "improve
the quality of the treatment” of BPH (Benign Prostatic Hypertrophy), which is what I, and most males my age, have, an enlarged prostate gland. I politely declined to participate in the clinical trial.

What’s wrong with this picture? Well, several things:

1) Do you think it is coincidental that Abbott Labs just finished developing Hytrin II a few months after their patent for Hytrin I ran out?

2) Do you think it is ethical for a large urology clinic to act as the agent for a drug manufacturer in a clinical trial? Isn't this something of a conflict of interest? The rumor is that they get $8,000 per recruit from the drug company.

3) Do you think either Abbott Labs or my doctor thought about the financial impact of a "new", drug on me or other seniors?

4) Why do you think the presidential race in 2000 made a BIG DEAL out of a "prescription drug benefit" for seniors? Why did Congress pass a law enacting this in 2003? Could it have something to do with the political contributions from the drug companies? Remember, that prescription drug benefit comes right out of taxpayers' pockets.

5) Why aren't we debating about how to keep the drug companies from gouging Americans while they sell the same drug at one-fifth the cost in Europe and Canada?

Relief From Canada

In September 2000, William Raspberry, wrote a column in the Washington Post about “One Long-Term Cure for High Drug Prices.” Here are a few paragraphs from that article:

“There are at least two pieces of the problem of high cost of prescription drugs, Rep. Bernie Sanders, an independent from Vermont, has been saying for some time now.

But most of the political and journalistic focus has been on only one piece: The ‘outrageously high price’ of medications. He'd like to call attention to the other half of the problem: The fact that Americans 'are paying by far the highest prices in the world for the same exact drug – not a generic, but the same exact drug.'

The solution, he says is simplicity itself. Allow registered pharmacies and drug distributors to purchase FDA-approved drugs anywhere in the world for resale
here. Reimportation, he calls it in the bill he hopes will pass Congress before the campaign recess.”

[NOTE: The bill passed and was signed into law by President Clinton. Two years later the Bureau of Health and Human Services has yet to write regulations to implement it because they are concerned for the “safety” of consumers….Hmmmm]

“This is important stuff,” Sanders said in a telephone interview from his Burlington office. ‘I traveled to Canada with a group of women with breast cancer, and we looked at the price of tamoxifen, a drug that is widely prescribed for the treatment of breast cancer. You could get it in Canada for a 10th of the U.S. price.

If this bill were to go into effect tomorrow, U.S. pharmacies would be purchasing tamoxifen in Canada and retailing it here at 30 to 50 percent less than they now charge.’

Sanders says the same thing applies to any number of drugs – all approved by the FDA and originally manufactured in or exported from the United States.

‘Pharmacies should be able to purchase these drugs the same way other companies purchase shoes, slacks or washing machines,’ he says.

…The biggest obstacle to passage this term is the pharmaceutical industry, Sanders says. ‘They are the most powerful lobbying force on Capitol Hill,’ he said. ‘They’ve spent tens of millions in opposition of this bill.’”

So What?

Where does all this leave you, the cancer patient or caregiver? Well, hopefully, it leaves you somewhat skeptical about claims by the cancer “industry” that all therapies not sold by Bristol-Myers-Squibb or Merck or Abbott Labs or whoever are “unproven” and therefore pure “quackery.”

As a bare minimum, to avoid what happened to Marjorie, my former wife, and me, you must educate yourself. You must be prepared to get more than one opinion. Then, when you’ve found the doctor (or homeopath or naturopath) that you trust, you must be prepared to co-doctor with him or her throughout your treatment.

This book is designed to end your blind faith and trust in our system of cancer “therapy” and arm you with the power to search beyond it. Faith is fine, if it derives from the power of knowledge and trust in your physician.
You Have The Power -- Use It

I'm going to arm you with information -- from books, the Internet, newsletters, magazines and any other source. You will be able to take charge of your health. I am hoping you will not be satisfied with treating symptoms. You will want to treat causes.

But before you can treat causes, you need to understand them.

Several years ago, one of my wife's doctors told me, "80% of it is still mystery to us." At the time, I didn't know what he meant. Now, I think I do.

What he meant was that what happens in your body at the cellular level is indeed mystery to almost all doctors.

- Interactions between your brain and your immune system.
- What stress does to your immune system.
- Exactly what chemotherapy does to your immune system.
- What the long term effects of chemotherapy are.
- What other treatments are available to cure cancer.
- How non-toxic substances can boost your immune system.
- What organs are affected by nutritional deficiencies (or excesses).
- How cells react to food and medicine.
- How exercise and nutrition affect diseases like diabetes.
- What "free radicals" do to your health.
- Which antioxidants are the most effective against free radicals.
- What natural substances provide your body with antioxidants.
- ...and many, many more.

Do You (Still) Trust Your Doctor?

As those of you know who have read this far, I advocate "co-doctoring." In my humble opinion, it's the only way to get and stay well. From my personal experience, doctors' knowledge is quite limited. Those of you who have researched cancer treatments for any length of time certainly know more than your doctor about natural treatments, diet and the true causes of and treatments for cancer.

While you must co-doctor, you must also find a trusted medical professional to monitor and oversee your cancer treatment. This is not a "do-it-yourself" project. If you haven't found that wonderful medical person who is sympathetic to your use of "alternative" (I hate that word!) treatments, keep looking. They are out
there. Their numbers are growing daily. Chapter 1 in this book has several resources you can use to locate one.

You must not trust everything you are told by a person with M.D. after their name. You must monitor everything that is done to your loved one in a hospital. That means spending the night in their hospital room with him/her. I have found that it is very hard to convince many people of those two simple facts. If you have had that same frustrating experience, here are a few statistics that might help you next time.

Doctors are the third leading cause of death in the United States. In causing the death of their patients, they trail only heart disease and cancer. There are currently more than (probably much more than) 250,000 deaths per year from iatrogenic causes. That long word means "induced in a patient by a physician's words or actions." Here's the published breakdown for 1999:

12,000 Unnecessary surgery
7,000 Medication errors in hospitals
20,000 Other errors in hospitals
80,000 Infections in hospitals
106,000 Non-error, negative effects of drugs

This information is from an article by Dr. Barbara Starfield of the John Hopkins School of Hygiene and Public Health in the Journal of the American Medical Association (JAMA Vol 284, July 26, 2000). The above statistics come from the review process that happens after every death in a hospital to determine the true cause of each death for insurance purposes and to get smarter about treatment.

Unfortunately, the hospitals seem to be losing the latter battle. If you think those numbers have gotten smaller in ensuing years, you're much more of an optimist than I am.

Do you really think hospitals accurately report that it was the chemotherapy treatment itself that killed the patient? I personally know dozens of cases where this was the true cause. A good estimate is that at least half of the 550,000 deaths each year attributed to “cancer” in the U.S. were actually caused by the cancer “therapy.” Furthermore, when a cancer patient treated with chemotherapy or radiation dies from infections like pneumonia caused by the damage to their immune system, their death is not a “cancer death.”

In Canada, where they have "socialized" medicine, it seems that doctors can be somewhat more frank than they can in the U.S. The McGill Cancer Center in Montreal, Quebec, one of the largest and most prestigious cancer treatment
centers in the world, did a study of oncologists to determine how they would respond to a diagnosis of cancer. On the confidential questionnaire, 58 out of 64 oncologists said that **ALL chemotherapy programs were unacceptable to them and their family members.** The overriding reasons they gave for this decision were that the drugs are **ineffective** and have an **unacceptable degree of toxicity**. These are the same doctors who will tell you that their chemotherapy treatments will shrink your tumor and prolong your life!

A similar and more recent study conducted by the Los Angeles Times found that **75%** of the oncologists stated that chemotherapy and radiation were **unacceptable as treatments for themselves or their families.** Yet, as of today, **75%** of cancer patients take chemotherapy. Go figure!

Are you sufficiently skeptical about medical advice? Good! Let’s get down to the business of making you “smarter than your oncologist.” Let’s first take a look at what cancer is and what causes it.
“The Philosophies of one age have become the Absurdities of the next and the Foolishness of yesterday has become the Wisdom of tomorrow.”  
Sir William Osler (1902)

WHAT IS CANCER?

Cancer is Simply...

A cancer diagnosis scares all of us. I have no more vivid memory than seeing my former wife's body after it had been wracked by four years of cancer, chemotherapy, operations and painkilling drugs.

Her bout with cancer started me on my search for answers. How can we deal with it gently? How can we prevent it? To do either, we must first understand it.

Some Cancer Numbers

First, let me give you a few numbers. Cancer is the second leading cause of death in the United States. About 22% of all deaths each year are blamed on cancer.

Notice the word "about". As I mentioned above, my former wife, Marjorie, died on November 1, 1994 after a four-year bout with cancer. On her death certificate, her doctor wrote "heart failure" as the cause of death. Obviously, any statistics on death rates need to be taken with a grain of salt. My doctor friends tell me that the law requires them to enter the final cause of death, not the precursor, whatever that means.

More than a million Americans are diagnosed with cancer each year and more than half a million death certificates cite cancer as the cause of death.

Another 800,000 develop small, "non-invading" cancers and various mild kinds of skin cancer. Both types generally do not spread and can be easily removed. These "non-invasive" cancers are not counted in the annual cancer statistics.

For women 35 to 74, cancer is the leading cause of death. For men of the same age range, cancer is second only to cardiovascular disease as the leading cause of death.
Despite the high incidence of cancer and our federal government's "War on Cancer", begun in 1971 and supported by over $100 billion dollars of research, virtually no progress has been made in curing the most common forms of cancer.

According to the World Health Organization, there were 10 million new cases of cancer in 1996, and in 2001 they predicted a yearly total of 14.7 million. These numbers are so huge that the suffering they imply is incomprehensible.

In the United States, the death rate from cancer had risen 6% by 1994 from 1970, just before the "War on Cancer" was launched. Despite the large number of people who have stopped smoking in recent years, according to the National Cancer Institute, the incidences for some of the most deadly cancers are sharply increasing.

To put it another way, every other man and every third woman in the United States will get cancer -- unless we understand it better and make the lifestyle changes I will show you.

If a tumor is found early and can be removed, it will not regrow or appear elsewhere about 50% of the time. Once a cancer has metastasized (spread to other sites in the body), chemotherapy and/or radiation will heal it permanently only about 3% of the time.

Where Does It Come From?

Most cancers arise from our interaction with the world around us. Almost one-third of all cancers diagnosed in Europe and in the United States can be linked to tobacco use. These account for more than 150,000 deaths in the United States each year.

Food choices contribute to another one-third of the cancers, especially stomach and colon cancers.

Thinner people are at lower risk of breast, prostate and uterine cancer. This is probably because these cancers are linked to high exposure to the sex hormones, estrogen and testosterone. These hormones are stored in fat.

People who drink alcohol excessively have higher levels of mouth and liver cancer.

People who have spent too much time in the sun, particularly before the age of 30, are more likely to develop skin cancer.
Occupational hazards, such as **asbestos and formaldehyde**, account for about 5% of all cancers.

The key words in cancer treatment today are "**avoidance**" and "**early detection**." Without a doubt, the best way to fight cancer is to avoid getting it in the first place.

**What Exactly Is Cancer?**

What follows is information available in more detail in a book called *REAL AGE* by Michael F. Roizen, M.D. Dr. Roizen's book and the related website and daily "tips" are one of the many resources I will recommend to you (see Appendix A).

Cancer means the **growth of tumors**. It’s a category that includes a broad range of diseases.

About 5 to 10% of all cancers stem from inherited genes. The other 90 to 95% are caused by **genetic “mistakes”** which develop **over your lifetime**. Mutations in your DNA after you are born are these mistakes. We accumulate them.

Cancer is a **temporary malfunction in our DNA**. This is the substance that regulates the growth of the body. It is contained in every cell we have. It is the “instruction book” for your body. It determines the color of our eyes, how tall we are, that we have an arm instead of a wing...

If you have a computer and I give you two manuals, each **three inches** thick, you’ll **never** learn to use your computer. But if I tell you to read pages 10 through 15 and you will learn how to use your computer, you will do that.

When your body needs a cell, at the last minute it decides if it needs a kidney, eye or fingernail cell. The body then tells that cell **which pages** of the DNA to read. When it takes the place of a dying cell, it begins to function in that capacity.

This DNA is **duplicated with every cell division**. Average adults have 75 trillion cells in their body. Once again – **75,000,000,000,000 cells**. 99% of the cells in our bodies are called “somatic” cells. All of them except brain and nerve cells get replaced thousands or hundreds of thousands of times during our lifetime. In **seven years** this process of cell division and death replaces virtually **every cell** in our bodies.
Another way to look at this is that every day about 29 billion cells get replaced in our body. Why is this important? Because cancer is caused by mutations that occur during this process. We all produce thousands of cancer cells every day.

**Division Problems**

When a cell divides, the DNA in that cell is copied and passed on to the new cell. But the DNA in any one cell can become damaged. Pieces of the instructions on the genes can get knocked out or changed – mutated.

If this mutation occurs in the wrong place – in an active gene, for instance – it can disrupt the function of the cell, causing it to die.

Your beautiful body includes a regulatory system that is mind-boggling. For example, when you get a simple cut on your hand, your cells go to work to repair the damage. When enough cells have gathered around the cut to heal it, the cells stop dividing. Ever wonder why? Because there is a “suicide gene” in the DNA which says “Enough, already.”

Not only is the total number of cells kept in check, but also “proofreader” genes in the DNA look for mutations. When they find one, they either fix it or kill the cell. They are on duty 24/7. Isn’t this stuff amazing?

Your immune system (about 20 trillion of the 75 trillion cells) also kills off these damaged cells by the millions every day. It is your second line of defense against mutated cells.

If the mutation happens, however, in a portion of the cell’s DNA that controls cell growth, i.e. an “oncogene,” the result is a rapidly growing and dividing cell – out of control – or what we call “cancer.”

The cell has lost its “suicide” function. The “proofreader” gene missed the mistake. Your immune system is too weak to provide its normal second line of defense. Result: The Big C.

The mutated cells usually travel to the weakest and most highly stressed organ in your body and you have a tumor. The cancer tumor grows because the “daughter” cells inherit the same mutation. When it is finally diagnosed, a cancer tumor has usually been growing for 5-15 years.

How do these mutations occur? Two ways:
- One is a random mistake in the DNA duplication process. Not much chance for you to control this. But not much reason for concern, either. The cell cycle controllers (proofreaders and suicide genes) and your immune system kill these “mistakes” as soon as they happen.

- The second way is damage to the DNA caused by “free radicals” or other irritants like radiation.

What Are Free Radicals?

Free radicals, the most common cause of cancerous DNA damage, are under your control. What are free radicals? Every day, we produce or take in millions of them. They are compounds that have one unpaired electron in their atomic makeup.

Try as you might, you cannot avoid free radicals. They are in your body and in the atmosphere. They result from the process your body uses to break down food, among many other causes. But they are also caused, and can be controlled, by the lifestyle decisions we make every day. What lifestyle decisions? Want a few examples?

- Cigarette smoking causes the largest number of free radicals of any lifestyle activity. Eventually, the number of free radicals it produces overcomes your body’s elaborate defenses and you, the smoker, get lung cancer, emphysema, heart disease, and many more maladies.

- The more fat you take in, the more free radicals you produce. Particularly damaging are trans-fatty acids found in abundance in the “Standard American Diet” (SAD). McDonald’s French fries, for example, have one of the highest concentrations of trans-fatty acids of any food.

- Food and vitamins and other supplements provide “anti-oxidants” which can kill off the free radicals by the millions.

- All of these lifestyle choices are cumulative – for better or worse.

In addition to cancer, free radical damage also causes senility, arthritis, hardening of the arteries, and the declining function of your immune system as you age.

Dietary Deficiencies

The lack of nutrients in our diet is the subject of many books. Several of the better ones are mentioned in Appendix A. Leaching of the soil by poor crop
rotation and **the way food is processed** ensure that our cells lack the nutrients they need to remain healthy. Supplements and organic food can correct this to a certain extent. However, these conditions are the cause of **virtually all degenerative disease** (arthritis, multiple sclerosis, diabetes, heart disease, etc.)

**Helping Your Immune System**

A multitude of studies in recent years confirm the immune system’s function in both preventing and **healing** cancer. Almost every day a new study is published in the search for drugs and vaccines that boost the immune system’s ability to fight off cancer.

As we will see in Chapter 3, these drugs are **not necessary**. At least five substances that are **non-toxic and harmless** to take have been proven to boost your immune system’s ability to “mop up” mutated cancerous cells.

Here’s a quote from Dr. Roizen’s book:

"**As you age, your second line of defense, your immune system, tends to be less vigilant and does not as readily detect and destroy these abnormalities. The weaker your immune system, the more likely that it will not provide the necessary backup. The longer you live, the more likely that you will get improper cell divisions, the more likely that the DNA in a specific cell will contain a mutation, and the more likely that your immune system won't be there to catch a mistake. The most important thing to remember is this: You can slow, and even reverse, the rate of aging of your immune system.**" [Emphasis added].

Dr. Roizen goes on to explain causes and prevention measures for various types of cancer. If you would like to read more of his work, his book is called **REAL AGE --Are You as Young as You Can Be?** copyright 1999 by Michael F. Roizen, M.D. Also, check out his website: [http://www.realage.com/](http://www.realage.com/)

My wife Terry and I took Dr. Roizen’s quiz to determine our "Real Age". The quiz covers a wide variety of **lifestyle questions**, each of which either adds to or subtracts from your chronological age. Mine came out to **minus 16** (making my "Real Age" 52 at the time). My wife’s came out to **minus 14** (making her "Real Age" 32 at the time). To take this quiz, just go to his website by clicking on the link above.

Dr. Roizen has an extended discussion on antioxidants (Vitamin C, E, etc.) and their role in controlling the "**free radicals**" which damage the genes in your cells.

It is pretty clear from all the research I have done that most cancers can be prevented by proper **diet, supplements and exercise**. Each of these three can
be visualized as a leg on a **three-legged stool**. If any one is neglected, the stool collapses – your body degenerates and you get sick. We will cover supplements and diet guidelines in this chapter. Diet and exercise are the subjects of “booklets” which accompany this book.

[NOTE: Many people have pointed out to me their view that this “stool” actually has a fourth leg. They say it is our **spiritual nature** and its positive effect on our health. I will not try to influence you one way or another on this subject. It is much too personal.]

## Treating Your Cancer

In summary, **CANCER IS NOT A “DISEASE.”** It is simply your body’s own cells which have assumed an **abnormal function** as a result of damage to their normal functioning. Stem cells multiply much more rapidly than cancer cells…so cancer cells are **not** even the most **rapidly dividing** cells in your body. They’re just abnormal cells that need to be brought under control.

Your body produces cancer cells **every day**, by the thousands. Your normal cell policing mechanism takes care of them – until it can’t any more. Then you are eventually diagnosed with cancer.

Your cancer probably **took years to develop** to the point where it can be detected. If you need a cause, blame it on your lifestyle. With that understanding, you also know that treating cancer is a **lifelong process**. Once you have the cancer under control, or in “remission,” you must continue to battle it with good lifestyle choices and support for your immune system for the **rest of your life**.

You can look on cancer as a **chronic condition**, something like hypertension (high blood pressure), heart trouble or diabetes. You must keep your body in top-notch cancer fighting shape. You **cannot** just revert to your old lifestyle and expect the cancer to stay away.

**It’s Baaaaaack!**

Unfortunately, **when cancer recurs**, because it was not kept under control, it tends to metastasize (spread) **more aggressively**. But, don’t worry. In Chapters 4 and 5 and the bonus books on Diet and Exercise, I’m going to show you exactly how to avoid this.

Conventional cancer treatment (surgery, chemotherapy and radiation) **destroys your immune system**. Oncologists pay little attention to rebuilding it or changing your lifestyle. This is why cancer patients treated with conventional
treatment seem to get better, only to have the cancer recur in a few months or years in a more aggressive form.

The succeeding chapters in this book will deal in detail with specific options available to every cancer patient. Many of these are supported by major research efforts. Many of them have spawned groups of survivors that have formed to get the information to other cancer sufferers.

In Appendix A, Resources Summary, is a complete list of the resources you can use to find more detail than I can include in this book. Also, the web sites will allow you to keep up-to-date on new developments as they occur, as will my newsletter.

Cancer Prevention

Many of the anti-oxidants our body needs to gobble up the free radicals and prevent cancer must come from supplements. If you've talked to your doctor lately about this subject, you were probably not encouraged by his response. Most physicians feel that supplements are unnecessary. A “proper” diet will provide all the vitamins, minerals, enzymes you need, they say. Just eat a “balanced” diet.

One prolific author on cancer -- its treatment and prevention -- is Ralph W. Moss, PhD. Dr. Moss has written 13 books on cancer therapy, causes, cures, prevention, etc., including Questioning Chemotherapy, Herbs Against Cancer and The Cancer Industry. This excerpt [along with my comments in the text boxes] is from one of his books, published in 2000, called Antioxidants Against Cancer.

“Attitudes of Doctors

Thousands of scientific articles point to the power of antioxidants, yet many doctors are not taught about this in medical school. Others may know about this exciting development but shy away from it because they fear peer pressure or stigmatization. And all too often, doctors respond to positive reports with a warning that patients should not take food supplements.

The conventional line is that research is promising, but there just isn't enough data on which to base firm conclusions… “

Are you beginning to see the importance of "co-doctoring" with your physician?
“Certainly, few medical interventions can have less risk than eating a diet high in antioxidants. We are not talking about taking arsenic here, but about brightly colored fruits and vegetables, as well as concentrated extracts. Yet many physicians draw the line when you discuss antioxidants and say, 'Much too risky. Not enough known.'”

“No wonder laypeople are turning to books, magazines, and Websites for information on antioxidants, and that many patients hesitate to even discuss questions of nutrition with their doctor. Patients are becoming more educated (sometimes more educated than their doctors!) and more empowered.”

I certainly hope that you will feel "more educated than your doctor" and definitely empowered when you finish reading this book. Right now, that is my whole reason for being!

If you would like to read more of Dr. Moss's work, these excerpts are from his book "Antioxidants Against Cancer", copyright 2000, by Ralph W. Moss, Ph.D. You may also want to visit his website: http://www.CancerDecisions.com.

Effective Antioxidant Supplements

We've been talking about antioxidants in relation to cancer prevention. They are also important in the prevention of heart attacks, strokes, macular degeneration of the eye, and about one hundred other illnesses associated with aging.

The reasons for including antioxidant-rich foods and supplements in your daily routine go far beyond cancer.

Let me give you here the best source for a supplement that covers all the bases. If you know of a better one, I'd like to hear about it. Please send me an e-mail at: bhenderson1@satx.rr.com

For just over 16 years, I have been receiving a newsletter called "Alternatives" written by Dr. David G. Williams. His writings about everything having to do with healthy living have been immensely helpful to my family and me.

[By the way, nothing I recommend in this e-book results in even one dime of income for me. I am truly writing this for your benefit, not for mine. If I ever do get paid for anything, it will be clearly marked as an ad.]

You are very fortunate. In 2000, Dr. Williams completed his website. It now contains archive copies of his monthly newsletters, all the way back to 1985.
This is a Mother Lode of health information. You can purchase for four or five dollars any of the back issues that interest you. Check it out at [http://www.drdavidwilliams.com/](http://www.drdavidwilliams.com/).

About the antioxidants...Dr. Williams, in 1996, put together something he called "Daily Advantage". It is a little transparent plastic package containing 8 capsules. I take one package with breakfast and another with lunch or dinner, as Dr. Williams advises.

Here's how he describes the "Daily Advantage" nutrient package:

"I've carefully chosen the 65 vitamins, minerals, antioxidants, herbs, superfoods, amino acids and digestive enzymes that are in Daily Advantage, based on all my years of research into nutritional supplementation.

...these hard-to-find nutrients work together to supercharge the antioxidants in the vitamin complex, making the overall formula more powerful and better able to destroy the free radicals attacking your cells."

Here are the ingredients in each Daily Advantage set of capsules:

**Essential Vitamins and Minerals:**

- Vitamin A     5,000 IU
- Vitamin C     2,000 mg
- Vitamin D     800 IU
- Vitamin K     60 mcg
- Thiamine (Vitamin B1)           50 mg
- Riboflavin (Vitamin B2)       50 mg
- Niacin       126 mg
- Vitamin B6       110 mg
- Folic Acid       400 mcg
- Vitamin B12       100 mcg
- Biotin        300 mcg
- Pantothenic Acid      150 mg
- Calcium    1,000 mg
- Iodine        100 mcg
- Magnesium      500 mg
- Zinc         20 mg
- Selenium       200 mcg
- Copper          2 mg
- Manganese       10 mg
- Chromium       200 mcg
- Molybdenum      100 mcg
- Potassium       100 mg
### Cancer-Free

- Vanadium: 150 mcg
- Choline: 100 mg
- Quercitin: 50 mg
- N-acetyl cysteine: 50 mg
- Trace Minerals Complex: 50 mg
- Lemon Bioflavonoids: 40 mg
- Para-aminobenzoic acid (PABA): 30 mg
- Inositol: 100 mg
- Silica: 26 mg
- Rutin (from buckwheat): 10 mg
- Hesperidin (from citrus peel): 10 mg
- Boron: 1,000 mcg

#### Advanced Antioxidant Shield

- Vitamin A (as beta carotene): 15,000 IU
- Vitamin E: 400 IU
- Tocotrienols (from rice): 20 mg
- Coenzyme Q10: 10 mg
- Alpha-Lipoic Acid: 10 mg
- Lutein (from marigolds): 6 mg
- Lycopene (from tomatoes): 6 mg

#### Herbal Superfood Booster

- Spirulina (from algae): 750 mg
- Turmeric (from root): 200 mg
- L-Taurine: 200 mg
- Siberian Ginseng Root: 180 mg
- Bee Pollen: 100 mg
- L-Carnitine: 100 mg
- Royal Jelly: 50 mg
- Astragalus (from leaf): 50 mg
- Ginger Root: 50 mg
- Gymnema Sylvestre: 50 mg
- Pancreatin: 50 mg
- Ox bile: 50 mg
- Green Tea Extract: 50 mg
- Siberian Ginseng Extract: 50 mg
- Panax Ginseng Extract: 40 mg
- Betaine Hydrochloride (HCL): 20 mg
- Ginkgo Biloba: 10 mg
- Lipase: 10 mg
- Cellulase: 10 mg

*Cancer-Free – Your Guide to Gentle, Non-toxic Healing*
In July 2002, Dr. Williams added an 8th brown capsule to the package at no extra charge. He calls it “EFA Advantage.” It consists of several fish oil (mercury-free) extracts rich in Omega-3 fatty acids. Here is the composition:

- EPA (Eicosapentaenoic Acid) 100 mg
- DHA (Docosahexaenoic Acid) 150 mg
- Other Omega-3 fatty acids 50 mg
- Gamma Linolenic Acid 50 mg

You can get more information at his website or by calling Mountain Home Nutritionals in Ranson, West Virginia, the people who distribute Daily Advantage for Dr. Williams. They can be reached at (800) 888-1415.

I recently read a book called “Comparative Guide to Nutritional Supplements” by Lyle MacWilliam, BSc, MSc, FP. Mr. MacWilliam had taken 500 of the nutritional supplements on the market in the U.S. and Canada. From comparing the ingredients in each, he came up with a list of the “100 best,” which he further narrowed down to the “top 5.” He also developed what he called a “blended standard.” He describes this standard as “a nutritional benchmark we have created based on the independent recommendations of seven scientific authorities.” This standard was used as the basis for comparison.

The book is interesting and I recommend it to you if you’re a student of nutrition. The “Daily Advantage” described above was not one of the 500 products covered in this book. Naturally, I was curious. I compared the above ingredients with the “blended standard” in this book. I’m sure it won’t surprise you that I found it was “better than the best” of the “top 5.”

I pay about $45 monthly for Daily Advantage, including shipping by Priority Mail. I cannot even imagine how much it would cost me to buy these ingredients at the local health food store. I attribute my glowing health largely to this product, a sensible diet and regular exercise. I don't smoke. I drink very moderately (less than one glass of wine or equivalent per day).

**Vitamin B or Not to B**

I can't tell you how many lists I have read of vitamins, minerals, amino acids, etc. like the one above and what each does for my body. Have you done that? Doesn't each one make your eyes glaze over? They sure do mine.
To this day, I have no idea why it is good for me to eat some choline, querectin, astralagus or ginger root each day. If a gun were held to my head, I could not tell you what all of Dr. Williams' 65 ingredients do for me...or what dire results would threaten my body if one were eliminated.

The exceptions are the antioxidants -- which include Beta-carotene, Vitamin E, tocotrienols, coenzyme Q10, alpha lipoic acid, lutein and lycopene. These I have studied enough to know why they are good. They are the best thing you can take to prevent cancer and lots of other degenerative diseases. Also, I know that Vitamin C is great for your production of collagen that supports your joints, soft tissues, proper bone formation and prevents metastasis of cancer (see below). It also helps maintain strong blood vessels, your immune system and your body's own repair capabilities.

All I can tell you is that since beginning his Daily Advantage supplement program in 1996, I have had no recurrence of the many colds, flu and other maladies that I suffered through before I started on it. This includes many years when I took Centrum Silver and many other "drugstore" supplements every day.

I have lots of energy, I sleep well and I enjoy exercise. I walk 18 holes of golf twice a week, sing in a men's a cappella chorus and quartet and play bridge on the computer with people from all over the world.

After Antioxidants, What?

So, you've bought Dr. Williams Daily Advantage or whatever you think is better and you're taking it every day. Is that all? Not quite.

Ultra-Fit

The doctor most directly responsible for my gaining control over my health is Dr. Joe Davis. I met him at one of his Ultra-Fit "wellness" centers here in San Antonio in 1992. I was 60 years old and in pretty sad shape.

Dr. Davis is an internal medicine specialist. He also is a human being who has fought through obesity and alcoholism to become a competitive weight lifter and founder of multiple Ultra-Fit centers around the country.

His book "Ultra-Fit" and the wellness centers were the result of his working with thousands of patients over a span of 15 years, most of whom were obese and out-of-shape. Let me quote from Dr. Davis's book "Ultra-Fit" along with my comments.
"It is my personal belief, as a physician of internal medicine, that dietary factors serve as the principal cause of our most common killers in the United States. The consequences of eating too much fat result in huge, staggering, burdensome problems. It costs society billions and billions of dollars each year to stem fat-related diseases."

Which diseases is he talking about? All degenerative diseases. Specifically: cancer of the colon; cancer of the breast; cancer of the uterus; cancer of the prostate gland; cancer of the lung; gouty arthritis; degenerative arthritis; heart attacks; high blood pressure; strokes; diabetes; and suicide, to name a few.

"I am not over-dramatizing fat-related illnesses. Sure, other factors figure into the equation that triggers any one of these illnesses.

However, simply because you carry excess fat on your body you increase your chances of developing one of these illnesses in your lifetime. The longer you carry excess fat, the greater your chances."

Dr. Davis is not trying to make you feel guilty. In fact, he says the blame for all the obesity in our society belongs to evolution.

"The human animal has evolved genetic machinery for conserving and storing calories as fat during intermittent periods when food is lacking. Only since the twentieth century have we developed the technology for food production, storage, and distribution so that, for practical purposes, we no longer suffer from a lack of food -- or at least not in the affluent parts of the world.

Think about that. For millions of years, man constantly searched for food, suffered famines. Suddenly, in the last fifty years, the United States suffers from excess food production.

It takes work not to become fat in America!"

Where To From Here?

Free radicals are bad. Fat causes more. What do we do about it? Dr. Davis prescribed changes in lifestyle – diet, exercise and even mental images. He cited hundreds of examples of how his patients applied these ideas.

Will it work for you? Probably. Several "booklets" come with this book. In the first two, "Stop Your Aging With Diet," and "Stop Your Aging With..."
Exercise;” I will cover in detail how I have applied the ideas of Dr. Davis and other physicians and therapists.

Now, we will turn to your most immediate concern – “How do I put this knowledge to work to cure my (or my loved one’s) cancer?” Please read on.
"As a chemist trained to interpret data, it is incomprehensible to me that physicians can ignore the clear evidence that chemotherapy does much, much more harm than good."

Alan C. Nixon, Ph.D., Past President, American Chemical Society

TREATING YOUR CANCER

The Basics

Cancer patients regularly endure treatments that are every bit as barbaric as the "bleeding" treatment used by doctors in the 15th century. Why? The answer lies in the "politics" of cancer.

If chemotherapy or radiation of any kind has been suggested for you or anyone you know or love, you MUST do some reading on your own and form your own opinion. I saw my former wife's body slowly tortured and destroyed by "chemo cocktails" over four long years. It reduced her to a scrawny, pain-wracked invalid without, in my judgment, extending her life by even one day.

Let's take a closer look at the "conventional" cancer treatments -- surgery, chemotherapy and radiation, also called “debulking” therapies.

Surgery

If you have one of the most common forms of cancer -- breast, prostate, colon, spleen, etc. -- a "hard" tumor is usually found. This is a characteristic of about 90% of the cancers reported every year. At some point, your oncologist or surgeon is going to suggest removing it. Marge had it done several times.

The reading I have done suggests that frequently the surgical removal of the tumor often causes metastasis that may not have occurred. You will be worse off for having the surgery, even if you recover fully from the surgery.

The surgeon will say, as he did to me, "We got it all." He will be wrong, most of the time.

A cancer tumor the size of the period at the end of this sentence contains a billion cancer cells. If only a few of these individual rascals escape the
surgeon’s knife, as they always do, your cancer is very likely to recur, unless you carefully rebuild your immune system.

The statistics say that if a tumor is found "early," it will only reappear 50% of the time. With what we know about cancer statistics, I would expect this one to be optimistic. But, let’s accept it. You have a 50/50 chance that you will be just as bad off after the removal. Plus, you have some chance that you will be much worse off, because metastasis will occur.

Nevertheless, surgical removal of a tumor is often desirable. The “debulking” it offers will often bring the number of cancer cells down to a point where your body’s own immune system can “mop up” the remaining cancer cells. This is true, however, only if you adopt a strict regimen to rebuild your immune system.

As we will see shortly, there are at least a hundred treatments with natural substances which all have evidence that they successfully treat some terminal cancer patients and many cancer tumors. Please explore some of them before you turn your care over to a surgeon, oncologist or radiologist.

Each of these treatments shows positive results within weeks, results that can be detected with conventional methods -- MRI, CT scan, PET scan and blood tests. Depending on the stage of your cancer, you may want to try them before, during, after or instead of your “conventional” treatment. If your cancer doctor won’t discuss this intelligently with you, please find another cancer doctor.

Chemotherapy

For the purposes of this discussion, we will refer to chemotherapy as the poisoning of dividing cells using cytotoxic drugs. That’s what chemotherapy is.

There are lots of other drugs used in cancer treatment to manage adverse reactions to the poison; alter hormonal balance; modify biological responses; or boost the immune system (interferon, etc.). For simplicity, we will not discuss those.

Chemotherapy uses various combinations of toxic drugs to poison cells as they divide. Remember the number 75 trillion? That’s the number of cells in the average person’s body. Each day, 29 billion or so of these replace themselves by division. The cancer cells are dividing to form new malignant cancer cells. Billions of healthy cells are also dividing every day to replace themselves.

The chemotherapy "cocktails" cannot distinguish between cancer cells and healthy cells. They bombard them all with the same napalm. Ever wonder why
almost all chemotherapy patients lose their hair? Guess where some of the fastest dividing cells in your body are? You guessed it. They're in your hair. Not cancer cells, just healthy cells replacing themselves. But there are lots more in your intestines and other vital organs and in your bone marrow. Blast them all! That's why all chemotherapy patients feel like hell and most wish they were dead! Marge sure did.

Does this strike you as barbaric treatment? Wouldn't you be looking for anything but this way to "treat" your patients if you were an oncologist? Most of them are well meaning but caught up in the system. The drug money (much of it involved in chemotherapy) drives the system. Most of the people doing the alternative research, at least in the U.S., are not practicing cancer doctors (oncologists). The research the cancer doctors do is almost totally funded by the drug industry.

There are a few malignancies that are highly responsive to chemotherapy. In October 1971, Dr. Gordon Zubrod, a leader of the National Cancer Institute, presented a list of these. All of these are rare in adults. But, most important, the list has not changed since 1971. Here it is:

Burkitt's lymphoma; Choriocarcinoma; Acute Lymphocytic Leukemia; Hodgkin's Disease; Lymphosarcoma; Embryonal Testicular Cancer; Wilms' Tumor; Ewing's Sarcoma; Rhabdomyosarcoma; Retinoblastoma.

That's it. In the 32 years since that list was published, there is no solid evidence that chemotherapy for the other, more common, cancers results in significant increased survival.

I would not rule out using chemotherapy, particularly if I had one of the rare types of cancer listed above. One of my daughters had Wilms' Tumor when she was three. Removal of the affected kidney and chemotherapy saved her life and she had no recurrence. She died (was murdered) at age 34, but that's another story.

You, too, may know someone who has had their cancer go into “remission” after treatment with chemotherapy drugs. They are among the lucky ones. But, please consider IPT (discussed below) and other gentler alternatives before you accept “high dose” chemotherapy.

Sometimes chemotherapy and/or radiation can be used effectively to “debulk” the tumor before using one or more of the non-toxic therapies we will discuss.
Approach chemotherapy with a very skeptical attitude. Most of the time you don't have to subject yourself or your loved one to this medieval form of "treatment."

Consider that since 1971 when the “War On Cancer” started, about $2 trillion (with a “t”) has been spent on conventional cancer treatment and research. Yet, despite the government and private sector’s work to put a positive face on cancer survival rates, they have not improved. The latest statistics show more Americans dying from common cancers than ever before. For example, the January 10, 2002 issue of the New England Journal of Medicine stated that 20 years of clinical trials using chemotherapy on advanced lung cancer have yielded survival improvement of only two months.

According to an article in the January, 2003 issue of Life Extension, “the institutions we have counted on to find a cure (National Cancer Institute, American Cancer Society, drug companies, etc.) have failed. This is not an allegation, but an admission made by the National Cancer Institute itself.”

Knowledge is power. If your doctor won't cooperate with you in experimenting with some of the treatments we will discuss, you should get another doctor. (See the list of resources for finding one in Chapter 1 above.)

Radiation

The third “approved” method of treating cancer is radiation therapy. If you have cancer, the subject will come up. For certain cancerous tumors, radiation is effective in reducing the size of the tumor. Most of the time the side effects are significant and very harmful. Once again, radiation does not distinguish between cancer cells and normal cells.

All cancerous tumors are made up of about 90% non-cancerous cells and 10% cancer cells. Reducing the tumor size does not equate to curing the cancer.

If you are considering either chemotherapy or radiation, you should definitely read a book called Antioxidants Against Cancer, by Ralph W. Moss, Ph.D., copyright 2000, published by Equinox Press, Inc. and available at amazon.com, Barnes & Noble, etc.

Dr. Moss is familiar to you if you've read everything in this book. His ten previous books cover the waterfront of cancer therapy. This one, however, gives a very close look at the importance of antioxidants. They are vital for both fending off cancer and other disease and for tolerating better both chemotherapy and radiation.
More importantly, he points out that patients who have had chemo or radiation never recover the antioxidant levels in their bodies without appropriate supplements. These antioxidants are vital to life. He discusses each supplement in depth and how various chemo drugs and radiation affect it.

Insulin Potentiation Therapy (IPT) – One Great Alternative

There are many options available to you. Here is some detail on one I think every cancer patient considering chemotherapy or radiation should look at.

Caring Medical – Dr. Hauser

Here's how two of the most experienced people in the U.S., Ross Hauser, M.D. and Marion Hauser, M.S., R.D. of Caring Medical Clinic in Oak Park, Illinois describe the procedure:

"During Insulin Potentiation Therapy a small dose of insulin is given to the patient that induces a state of low blood sugar (hypoglycemia). When the patient begins to have symptoms such as a feeling of lightheadedness and weakness (hypoglycemia symptoms) [this happens in about 30 minutes], low doses of traditional chemotherapy are given by intravenous push. When insulin is given, the cancer cells are fooled into thinking they are going to be fed food, when in reality they are going to be destroyed by chemotherapy. Thereby, smaller, safer, more effective doses of chemotherapy can be administered in place of high dose chemotherapy."

What is a Potentiator?

A potentiating agent is one that increases the effectiveness of another agent. In regard to chemotherapy, a potentiator (insulin, in this case) increases the kill power of the drug toward cancer cells. Because of this ability, a lower dose of the medication is needed to get the same pharmacological effect.

Dr. Ross Hauser says “Various substances can be used to optimize the cancer-killing effects of chemotherapy, in addition to insulin, dimethyl sulfoxide (DMSO), oxygen therapies, and hyperthermia.

Scientific studies have shown that vitamin E, vitamin C, coenzyme Q10, beta carotene, glutathione, N-acetylcysteine, glutamine, selenium, genistein, diadzein, quercetin, melatonin, green tea, vitamin A, milk thistle, Coriolus versicolor, vitamin K, bupleurum, and rabdosia have been shown in studies to potentiate the killing effects of chemotherapy.
When one reviews the literature, there is resounding evidence that nutrients and herbal remedies enhance the killing effects of chemotherapy and subsequently reduce its side effects. It is more than overdue that modern oncologists realize this fact and start prescribing some of these nutriceuticals for their patients."

**But Does It Work?**

This procedure increases the effectiveness of the chemotherapy agents by 10,000 times, which allows very small amounts of chemo to be used, thus virtually eliminating the side effects of conventional doses. The results, as confirmed by several of my readers, can be dramatic.

Why doesn't your doctor know about this effective, less expensive, less damaging protocol? The FDA hasn't approved it, except as an “experimental procedure.” Thus, some, but not all, insurance companies will pay for it. Medicare will not pay for it.

The National Cancer Institute (NCI) has had a researcher assigned to study it and do clinical trials since September 2000, but he has been given no funding yet. Don't hold your breath until he gets this money. You don't have to wait for the bureaucracy to get around to approving this procedure. IPT has been used very successfully to fight cancer for over 70 years and it is legal.

Currently there are about 110 doctors worldwide trained on this procedure in the U.S., Canada, Mexico, Argentina, Brazil, France and Ecuador. There is also one trained veterinarian in Arizona. One of the M.D.'s who has received the IPT training is Dr. Douglas Brodie of Reno, Nevada, a prominent CAM practitioner. I'll tell you how to find all the trained doctors in a minute.

**The Doctors Garcia – True Pioneers**

Dr. Donato Perez Garcia, Sr. discovered IPT and began using it in Tijuana in 1930. Here are some interesting statistics. At the IPT course in Las Vegas, Nevada in February 2001, Dr. Donato Perez García showed a slide of the “Morbidity” (bad outcomes) that his family (three generations of physicians) has had administering IPT.

Donato Perez Garcia, Sr., M.D. (ORIGINATOR OF IPT) (1896-1971)
YEARS OF DOING IPT 1930-1971: **41 YEARS MORBIDITY 0%**

Donato Perez Garcia Bellon, M.D. (1930-2000)
YEARS OF DOING IPT 1956-2000: **44 YEARS MORBIDITY 0%**

Donato Perez Garcia, Jr., M.D. (Still living)
YEARS OF DOING IPT 1983-2000: **17 YEARS MORBIDITY 0%**
The family of three physicians who founded IPT and have over 100 years of experience with it (there is some overlap in their careers), have never had a negative outcome because of IPT. Obviously, it doesn't permanently heal everyone. However, by contrast, hundreds of thousands of cancer patients die of high-dose chemotherapy in the U. S. alone every year.

Because the doses of chemotherapy medications used during IPT are 10-25% of the amounts given during traditional cancer care, the side effect risk is diminished greatly. The most common side effect from IPT is fatigue during the day of treatment. Rarely some nausea occurs.

One of the main reasons that people get IPT is because it is a great alternative to high dose chemotherapy with all of its side effects that can include suppression of the immune system, hair loss, nerve, heart, kidney, liver injury and, of course, death.

Why doesn't your oncologist know about this if it has been around for 75 years? It's not because it hasn't been documented to the cancer "system." In fact, IPT physicians have briefed the National Institutes of Health several times. There are numerous published studies in professional journals.

One obvious reason why it is not popular is the potential loss of money to the cancer industry. It is estimated that every cancer patient will produce $500,000 for the industry by the time he/she is given his or her last treatment. Such a simple, effective, and dramatic treatment that uses much less of the chemotherapy drugs would severely cut into the industry's profits. You do not have to be a victim of this evil greed.

To get smart quickly about this treatment, go to:

http://www.getipt.org

Among much other information there, you will find a long interview with Donna McDermott. She is a breast cancer patient cured using IPT. In the interview, she describes her entire case -- before, during and after the IPT. Dr. Donato Perez Garcia (see above) treated her in Tijuana.

At that same site, you will also find a listing of all the qualified doctors, arranged by experience or location.

To complete your investigation, check out this other site. It is Dr. Hauser and his wife’s clinic site (the people I quoted at the beginning of this section). You will find many convincing testimonials there from their patients. They have written a book on this subject and they publish an interesting weekly newsletter. Their
The Cost

Several of my readers who have used this treatment in various parts of the country confirm that the cost is about **$13,000** for the initial three weeks of treatment. It is done on an outpatient basis, but you need to stay in the vicinity of the clinic because **treatments are done daily**. The regimen includes other treatments such as intravenous Vitamin C, immune system boosters, oxygen therapy, hyperthermia, etc.

Selecting A Treatment – Some General Guidelines

1. If you can afford it, go **wherever** you need to. Mexico, Canada, Spain – wherever. The perfect doctor for you may not be in your country or state.

2. Insist on a proven **track record** with your type of cancer. If the doctor or clinic will not give you **references** willing to talk to you, continue your search.

3. If you can’t afford travel to a clinic, **don’t worry**. Just start the “self-treatments” I describe in Chapter 5, **find a doctor in your area to help you** and keep trying additional treatments until you find a combination that works.

4. Don’t accept “**response rate**” statistics. If the tumor “responds” to a particular treatment, that is counted as a plus by most oncologists. This is **irrelevant** to you, however. **5-year survival rates** are meaningless, also. What matters is the **quality of life** during and at the end of treatment and healing the cancer to the point where you live a normal lifespan and die of something else.

5. Use **Internet** searches. Discuss on the many **forums** available the treatment options available to you with **real people** who also have your type of cancer and have recovered (or have not). Several of these forums are covered in Appendix A to this book.

6. Avoid “**mainstream**” clinics and doctors – M. D. Anderson, Mayo Clinic, Sloan-Kettering Cancer Center, etc. The treatments you will receive there are never going to include the options you will read about shortly. Remember the American Cancer Society’s “unproven remedies” list. None of the most prominent mainstream doctors and hospitals can stray
from conventional treatments – surgery, chemotherapy and radiation. You need your doctor to supervise your exploration of other non-toxic cures, many of which are listed in this book.

- Don’t balk when your health insurance or Medicare does not cover the treatment you are considering. You are dealing with your life here. Nothing is more important than healing your cancer. If you cannot afford it, find a friend or family member willing to lend you the money to do it right. You will live to repay them – believe me.

- Get appropriate tests. I will cover these in the next section.

**Tests That You Must Have**

In recent years, effective tests using modern technology have been developed which help to treat your cancer. Here are several you will definitely need:

*“Standard” Blood Tests*

You've been having blood tests all your life. But did you realize that they are full of vital information for you about disease prevention?

Did you realize that your doctor probably has not given you any of that information -- probably because he/she doesn't know what it is?

Rather than bore you with my recent experience, I'll just give you some of the lessons I learned and a resource to help you learn them too.

I recently had a complete blood test performed at “Lab One” in San Antonio. It was unique in two ways. First, I ordered and paid for it myself (no doctor’s prescription required) by calling the people at:

http://www.directlabs.com

Second, it was complete. 33 elements of blood chemistry tested. Most of the blood tests ordered by your doctor are quite limited. HMOs are very picky about what they will pay for. So, unless some diagnosis calls for it, many elements in the blood test are omitted because they add to the expense.

Once I had my blood test results, I sent them to my friend Cy Bursuk, a consulting nutritionist and lifelong expert on the subject of blood test interpretation. The same day I faxed the blood test results to Cy, he faxed me back an eight-page form called a "Bionutritional Blood Test Profile." Each one of 33 elements of the blood chemistry is described. Both the "Optimum value" and "Optimum range" are shown, along with a description in plain English.
of what it means if that element is high or low.

It was very interesting that for all 33 "Elements," the "Optimum Range" was much tighter than the "Limits" shown on the lab’s printout of the blood test. For example, item #1 is Calcium. The standard blood test limits were 8.5 to 10.6. My 9.2 reading was well within limits. On Cy’s profile, however, the "Optimum value" was 9.9 and the "Optimum range" was 9.7 to 10.2.

The explanation for "Decreased Calcium" in Cy's profile said: "May indicate poor enzymation (chemical changes) of fatty acids and improper protein digestion in the liver."

Cy says that the normal blood test limits indicate that when you are outside them, you have a "clinical" condition -- i.e. something which needs to be "treated" by the doctor, no doubt with some type of synthetic drug. What Cy tries to do, with the 15,000 people he has worked with to date, is to catch sub-clinical conditions that can be treated and corrected with changes in diet and supplementation. A very different approach.

Several other items (iron, LDH) in Cy's profile confirmed that I have weak liver, pancreas and spleen function. All three need support. Interestingly, according to Cy, I do not need to "detox" the liver. In fact, he said that would just aggravate the condition. The liver, pancreas and spleen need "support."

Moral of this story:

1. Taking charge of your own health care includes understanding your blood tests.

2. Normal blood tests give you no clue about sub-clinical problems that can be dealt with before they become disease. Even if they did, your doctor is unlikely to know how to treat them -- except to treat the symptoms with some kind of prescription drug.

3. The "normal" blood test your doctor gives you is limited. Almost all doctors work under the "eagle eye" of an HMO. The more complete blood tests are more expensive. Draw your own conclusions.

4. Most degenerative disease (like cancer, diabetes, arthritis, etc) has given clues in the blood chemistry long before medical doctors diagnose it. In most cases, it can be headed off by changes in diet and supplementation.

To learn more about Cy Bursuk and his approach to blood chemistry analysis and nutrition, go to:
Live Blood Cell Analysis

This test may also be called a “phase contrast lens” study. A simple blood drop sample is taken and placed under a high-powered microscope. On a TV monitor, you will see the formations and activity of all your cells – red, white and platelets – floating around “live and in living color.”

You and the doctor or nutritionist will be able to see whether they are functioning properly or if they are deficient or malformed and what the cause is. You will also see if you have a lack of enzymes, liver congestion, kidney congestion, fungal formations and much, much more.

This is one test that you will be able to see for yourself and not just get a result from your doctor’s lab. The doctor will prescribe supplements, vitamins, herbs or minerals that are specific for the condition that this test shows. There is no magic to this test. It is very logical. It costs only about $40. Subsequent tests can be put on the same video tape, so you can easily compare them.

The cost of this test and treatment is in the supplements. But instead of the “hit and miss” approach most of us take to vitamins, herbs, enzymes and other supplements, you will be taking those you specifically need for your condition.

Any M.D., N.D. (naturopathic doctor) or nutritionist who has the equipment can do this test. Ask about it before you select your doctor or clinic.

Thyroid Panel T3, T4 and TSh

Your health insurance and Medicare cover this test. A hyperactive or hypoactive thyroid gland is one of the contributory factors to many major diseases or conditions such as heart disease, cancer, parasites, blood clotting and others. It is a simple blood test. There are homeopathic and naturopathic remedies for low functioning or over-functioning thyroids.

Trace Mineral Test

This test costs about $150 and may be paid for by your health insurance or Medicare. Your blood sample is sent to a lab such as Metatrix in Norcross, Georgia. There are others that can do it. It takes about a week to get the results. The profound importance of this test is that it reads and outlines every mineral in your body. Heavy metals such as zinc, aluminum and iron where an excess can cause a problem are shown. Mercury leaching from fillings in your teeth will show up. Deficiencies in needed minerals such as manganese,
selenium, magnesium, etc. are shown. Your naturopath or Medical Doctor can then recommend specific supplements, vitamins or herbs for your condition.

**Natural Killer Cell Activity Test**

This test (sometimes called a “four-hour radioactive-chromium release assay”) determines the degree of strength of your Natural Killer (NK) cells. As we will see in the next section, NK cell activity is an indicator of the ability of your immune system to “mop up” cancer cells. At present, I know of two labs that perform this test:

Tiburon Diagnostic Laboratories  
802 E. 16th St.  
Tucson, AZ 85719  
(877) 842-8766

Specialty Laboratories  
2211 Michigan Ave.  
Santa Monica, CA 90404-3400  
(800) 421-7110

**Anti-Malignin Antibody in Serum (AMAS) Test**

This is advertised as the “most accurate cancer test in the world.” It can detect cancer nearly two years before any other method now in use with accuracy above 99%. Even more important, it can accurately detect the recurrence of cancer – any form of cancer – long before other cancer “marker” tests, with far fewer false positives.

Most doctors are unaware of this test. It is not marketed like other, much more expensive, tests such as PET scans, CT scans, etc. It is performed only at the lab owned by the couple that discovered the antibody in 1974. They have patented the test. Any doctor can order it from Dr. Bogoch’s Oncolab, 36 The Fenway, Boston, MA 02215, (800) 922-8378. The cost: $135 plus overnight shipping.

No one test is perfect. In the case of the AMAS test, it doesn’t work for advanced cancer cases. The antibody it tests for is not there. Also, there have been cases of false negatives reported, particularly for breast cancer. Apparently, these occur with tumors larger than 5cm. However, I would strongly recommend that you discuss this test with your doctor. If your doctor is not interested, you can order the test kit and information yourself and find another doctor to prescribe it for you. One of my readers in Montreal did just that for his wife. Just call (800) 9CATest.
How Often To Test

Even a healthy person should have these tests done once a year. Whatever they cost can easily be made up by targeting your supplements to your specific condition instead of guessing at dosages. If you have cancer, the live blood cell analysis should be done monthly and the Natural Killer Cell Activity Test done quarterly. This is because your supplements have to be regulated as you become healthier. The AMAS test kit has guidelines for how often to test.

Don’t Panic

Above all, don’t panic at your cancer diagnosis. A cancer diagnosis, no matter how severe, is not a death notice. Many thousands of people who have had severe, Stage IV metastasized cancer are completely well today. You can be, too. The treatment methods and tests in this book will give you your health back.

Whether you are the patient or caregiver, when your experience with cancer is over, you will have learned many valuable lessons about lifestyle that will help you live a long and happy life. Count your blessings!

Your Rights As A Patient

Sometimes I think the word patient was applied to us innocent users of the medical “system” because we are so…..patient. As a cancer “patient,” it will pay you to be IMpatient. As a cancer advocate for a friend or loved one, it will serve you well to be even more impatient than the patient.

Nothing will be more important in the initial days after your diagnosis than knowing your rights as a patient. Here is an excerpt from another book by Dr. Ralph W. Moss. Published in 1995, the book is called “Questioning Chemotherapy.”

“The patient’s rights

This book offers people with cancer some of the information they need to take a more active role in their choice of treatments. But patients are sometimes confused about what rights they have regarding their choices.

Dr. Martin Shapiro of UCLA has told the informative story of a patient of his, a man in his thirties with advanced lung cancer, which had already failed to respond to three different chemotherapeutic regimens.

When he came in to start a fourth one, Shapiro asked him if this was what he really wanted to do.
'Do I have any other choice?' the patient asked. The man was ready to do whatever he thought the doctor wanted, spurred on by stories of the wonders of chemotherapy. 'Unduly optimistic publicity helps to create a climate in which patients resign themselves to chemotherapy for conditions in which it does not work,' Shapiro concluded.

So let me state this clearly: **If you are a sane and sentient adult you have an absolute right to take or refuse any treatment.** You are certainly within your rights to continue chemotherapy, if that is your wish, even if you or your doctor thinks the odds are slim that it will help you. You can also walk away from any cancer therapy situation and **nobody can stop you.** Here are some other possible choices:

- You may choose the **alternative** approach. For instance, you may go to a domestic or foreign clinic; work with an alternative doctor or health care practitioner; or procure **unconventional** treatments that are not necessarily **approved of by the government** or medical authorities.

- You may choose to enter an **experimental protocol** sponsored by the NCI [National Cancer Institute], or another such institution. Lists and descriptions of such treatments are available via the **computerized PDQ system**, or, in the U.S., by calling the NCI's Cancer Information Service at 1-800-4-CANCER.

- Or, you may decide to work with your loved ones and health-care providers to 'maximize comfort and function, to sort through the maze of emotional and social problems evoked by the illness, and even to grieve together over the impending death.'

You have a **right** to a **copy of your medical records.** You can always ask for a **second, third, or fourth opinion.** You can demand answers to all your questions in a language you can understand. Especially, you can always ask to see proof of the effectiveness of the treatment being offered in terms of **actual...survival** and/or improved quality of life.

You always have the right to 'informed consent,' to be told and understand exactly what is going to be done to you.

And just because it is called **informed consent does not mean that you have to consent,** after you are allegedly informed. At any point, **you can refuse.** You do not have to be 'reasonable' or to live up to anyone else’s standards, **including your doctor's.**
The worst that will happen is that the doctor will get angry. But the doctor should know that if he or she refuses to treat a patient on capricious or unreasonable grounds, this may be actionable behavior." [translation: you can sue him/her for malpractice].

Well, dear friends, if my late wife and I had known what I know now, we would have approached her cancer treatment much differently than we did. Please learn from our expensive mistake.

I urge you to read Dr. Moss' book, and any others you can lay your hands on. You will soon have enough information (far more than I can give you here) on which to make a rational choice of treatment. Again, this book is "Questioning Chemotherapy", by Ralph W. Moss, Ph. D., copyright 1995 and published by Equinox Press. And don't forget Dr. Moss' website. It's at:

http://www.cancerdecisions.com/

Let me conclude this section by quoting again from Dr. Moss:

"Consider this sage advice from a cancer patient's widow, who wrote to The Cancer Chronicles (11/93):

'Question your doctor. Question him every step of the way. The more serious the condition, the more serious the treatment, the more stringent the questioning must be. If you don't have the energy, enlist the help of someone who does.... Don't be afraid to fight. Question your doctor, the same way you would a politician, for the two are not dissimilar. If your doctor won't answer the questions, find one that will.... There is a party line within the medical system. Question your doctor. Always.'

And indeed, some doctors welcome intelligent dialogue, and appreciate the chance to share the complexities of their science with inquisitive patients. Others don't. If a doctor gets angry, condescending, or evasive, it may be time to look for another doctor. Never allow yourself to be hustled. Most likely you pride yourself on being a knowledgeable consumer in the general marketplace. Be an informed medical consumer, as well.

You now have a yardstick by which to measure the effectiveness of cancer treatments. If a drug or regimen has not been proven to cure, significantly prolong actual survival, or improve the quality of life -- if it only temporarily shrinks tumors, with a probable loss in well being -- then it is at most entirely experimental and unproven, and should not be represented as anything else. At worst, it could be not just ineffective, but painful, destructive -- even fatal.
It may be time to look into other alternative, nutritional, or nontoxic treatments. It is my personal opinion that the best of these treatments are based on more plausible theories and offer more compelling evidence than most chemotherapy; they certainly do far less harm.

Patients and their loved ones are often understandably devastated when they learn that they have cancer. It is an additional blow to learn that chemotherapy is not likely to help, much less cure. But cancer is not a death sentence. It can be a turning point.

The loss of illusions may be the beginning of wisdom.”

Some More Doctors’ Opinions

Here are some quotes from doctors who I respect:

“We have a multi-billion dollar industry that is killing people, right and left, just for financial gain. Their idea of research is to see whether two doses of this poison is better than three doses of that poison.”

Glen Warner, M.D., oncologist

“I look upon cancer in the same way that I look upon heart disease, arthritis, high blood pressure, or even obesity, for that matter, in that by dramatically strengthening the body’s immune system through diet, nutritional supplements, and exercise, the body can rid itself of the cancer, just as it does in other degenerative diseases. Consequently, I wouldn’t have chemotherapy and radiation because I’m not interested in therapies that cripple the immune system, and, in my opinion, virtually ensure failure for the majority of cancer patients.”

Julian Whitaker, M.D.

“There have been many cancer cures, and all have been ruthlessly and systematically suppressed with a Gestapo-like thoroughness by the cancer establishment. The cancer establishment is the not-too-shadowy association of the American Cancer Society, the leading cancer hospitals, the National Cancer Institute and the FDA. The shadowy part is the fact that these respected institutions are very much dominated by members and friends of members of the pharmaceutical industry, which profits so incredibly much from our profession-wide obsession with chemotherapy.”

Robert C. Atkins, M.D., author, “Dr. Atkins New Diet Revolution” and founder, The Atkins Center in New York
“My studies have proved conclusively that untreated cancer victims live up to four times longer than treated individuals. If one has cancer and opts to do nothing at all, he will live longer and feel better than if he undergoes radiation, chemotherapy or surgery.”

Professor Hardin B. Jones, Ph.D., University of California

“Everyone should know that the ‘war on cancer’ is largely a fraud, and that the National Cancer Institute and the American Cancer Society are derelict in their duties to the people who support them.”

Linus Pauling, Ph.D., two-time Nobel Laureate

Now, for some specific self-treatments that I recommend you begin immediately, please read on.
CHAPTER 5

“All of my knowledge is learned by standing on the shoulders of geniuses.”
Albert Schweitzer

CANCER SELF-TREATMENTS THAT I RECOMMEND

Please don’t feel you are exploring uncharted territory when you begin to treat your cancer with “alternative” treatments. In 1997, the recorded number of visits to alternative practitioners in the U.S. surpassed the number of visits to allopathic (conventional) physicians. That number has been rising ever since. A recent survey by Life Extension Foundation found that 80% of cancer patients take one or more “alternative” treatments and half of them do not tell their doctor about these treatments. That is not what I recommend for you.

In this section of the book, I will describe cancer treatments that you need to discuss with your doctor, no matter who he/she is. However, if your current doctor is not sympathetic to these treatments, start them anyway while you look for one who is. They are treatments for which a vast library of information is available. They have been proven over many years to work on all types of cancer.

I will discuss in detail the ones I would adopt if I had cancer. What type of cancer? It wouldn’t matter. Whatever type and stage of cancer I was diagnosed with, I would do the same things described here. Many of these are not expensive. Guaranteed to work? Sorry. No guarantees.

You must research these beyond the information in this book. Do so before you discuss them with your doctor. In that way, you will be in a position to judge his/her reaction when you bring up the subject. Don’t just “ask your doctor” about them. Very few doctors are as knowledgeable about these cancer cures as you will be in a few minutes. Before you bring these up, you must be thoroughly convinced of their efficacy.

Immune System Boosters

Cancer and The Immune System

No cancer either begins or thrives if the patient’s immune system is strong. So, a first priority for either prevention or healing is to get your immune system in cancer-fighting shape. Supplements are essential. No single diet (e.g. macrobiotic diet, Patrick Quillin’s diet, Dr. Jordan Rubin’s diet) should be
considered adequate. All require supplementation. Fortunately, you still have many options.

**MGN-3 (R.I.P.)**

Before July 12th, 2004, I would have recommended MGN-3 here. It’s power as an immune system stimulant was backed by lots of scientific evidence. Hundreds of my readers who have become cancer-free used it. Several used nothing else. In short, it worked. Too well, it seems. Pressure from Big Pharma finally succeeded. A frivolous lawsuit brought against Lane Labs by the FDA over labeling, begun in 1999, resulted in a decision by a New Jersey federal judge. On July 12th, 2004, he ordered Lane Labs, the only source for MGN-3, to shut down and reimburse everyone who had bought its products since 1999.

If this kind of nonsense makes you angry, as it should, you are not powerless. Frequently in my lifetime, movements by angry groups of voters have changed government policies. You have a voice. One group gaining strength is called “Campaign For Better Health.” You can explore their movement and use their resources to contact your Congresspersons at:

A separate but related group is trying to register as many of us who care about this issue to vote. They are called Citizens for Health. You can use their site to register to vote. Just go to:

http://www.citizens.org/register

**Other Options**

Here are some other options to boost your immune system.

**RM-10**

Sold at many web sites, this Garden of Life product is a combination of 10 different mushroom extracts plus aloe vera and uncaria tomentosa (another herbal extract). I recommend it for two reasons. First, several of my readers recommended it to me, long before MGN-3 was taken off the market. Second, it comes from Garden of Life, a source I trust.

There are no “therapeutic” doses for fighting cancer on the bottle. See the paragraph on MGN-3 above for the reason. Actually, the FDA has been harassing Garden of Life recently about their labeling and I understand they had to change all their labels at great cost. At any rate, I would take triple the
“normal” dose on the bottle if I had cancer. That works out to 9 capsules a day. A typical price (you should shop around) is $56 for 120 capsules. At 9 capsules a day, that works out to about $140 a month.

I would continue to take this dose for 4-5 weeks, then reduce it to the “maintenance” dose of 1 capsule 3 times a day ($41 per month). One web site, which describes the contents of this product, is:

http://www.BeyondProbiotics.net/rm10.htm

One of the things that caught my eye about RM-10 is that one of the mushroom extracts they use is “agaricus blazei.” First discovered in Brazil, in a small village where no native had ever experienced cancer, this mushroom extract has been studied extensively by Japanese scientists. Japanese scientists are, without a doubt, the world’s best when it comes to mushroom compounds.

The good news about this product is that it contains beta glucan 1,6, which makes it unnecessary to supplement the RM-10 with a beta glucan compound, as I have long recommended people do with MGN-3, for example. Beta glucan is a powerful stimulant, particularly for the vital macrophage cells of the immune system.

Msr-3

Another product I trust is Msr-3. This was first marketed as an MGN-3 copycat product in 2002. It comes from another source I trust, Swanson Vitamins. I have bought a lot of products from Swanson Vitamins over the years. Their prices and service are hard to beat.

The composition of Msr-3 is similar to MGN-3. It has a rice bran hull extract mixed with three mushroom extracts. It also contains some colustrum. It does not contain beta glucan, as RM-10 does.

The cost is about 29 cents per capsule. At the recommended dosage for the first four weeks (12 capsules per day), the cost per month is $105. At the maintenance dose of 4 capsules per day, the cost per month is only $35 per month. I would recommend a beta glucan product be taken along with the Msr-3 (see below), which would increase the price.

The web site for Swanson Vitamins, where you can order this product is:

http://www.SwansonVitamins.com
They have a “search” window in the upper left of the screen at this site. If you want to find the Msr-3, enter either the Item Number, which is SW868 or Msr-3. If you enter the MSR-3 in all caps, you won’t find it.

Oncolyn

When I discussed this subject with a friend who owns a health food store in early 2001, she recommended I take a look at Oncolyn. She said it was “better than MGN-3.” As with most supplements, there are indeed alternatives. I respect her opinion, so I did some research.

Like MGN-3, RM-10 and Msr-3, Oncolyn destroys cancer cells and neutralizes the toxicity of most chemotherapy drugs. It also, however, acts as a powerful anti-oxidant, inhibits angiogenesis (which both delays tumor growth and suppresses tumor metastasis), and “induces differentiation of cancer cells back to normal cells.”

Powerful stuff. It was formulated by Arthur H.K. DJang, M.D., Ph.D., M.P.H. He is a U.S. licensed physician and certified specialist by the American Boards of Pathology and the American Board of Nuclear Medicine with expertise in Infectious Diseases, Biochemistry and Immunology (Ph.D), Preventive Medicine (M.P.H.) and Cytopathology. Impressed? Me, too.

Oncolyn is totally herbal and non-toxic. You need to consult with your medical professional, but at the doses I have seen recommended for cancer patients, it may be a little less expensive than MGN-3 was and considerably more expensive than RM-10 or the Msr-3/Beta Max combination.

Oncolyn is available at most health food stores and on the Internet. To learn more about it, go to:

http://www.bellayre.com

If you would like to order it online, the best source is the manufacturer. Go to:

http://www.santeintl.com

Transfer Factor Plus

Transfer Factor Plus has been around for a long time. It is based on using “colustrum,” an extract from a calving cow’s milk to “transfer” the antibodies in the milk (immediately after the cow has borne a calf) to your immune system. Other sources – e. g. human breast milk and “avian” eggs are also used.
It is quite expensive because it is distributed through multi-level marketing (MLM). Generally, I don’t like to recommend products distributed this way. The markups are excessive.

If you are interested in Transfer Factor Plus, you will find lots of information on it at many web sites. Just look it up on Google.com or your favorite search engine.

**Enhance the Effect With Beta Glucan**

Hundreds of tests on animals and humans have shown that beta glucan is very effective in activating one of the key cell types in the immune system – the **macrophage**. This word derives from the Greek words meaning “big eater.”

The macrophage cells have been called the **control centers** for the immune system. In addition to gobbling up foreign matter in your blood, they **send out signals** to the NK, T, B and other immune system cells telling them to attack certain “invaders.” Anything that helps your macrophage cells work better is definitely a part of your cancer treatment.

If you can afford it, you should take about **500-1,500 mg** of beta glucan daily along with the Msr-3. It has been given a GRAS (Generally Recognized As Safe) designation by the FDA. That just means it has **no known adverse effects** nor does it interfere with any other substances or drugs.

Beta glucan is a common substance **marketed by many sources** (unlike RM-10, for example, which comes only from Garden of Life). These sources **vary widely** in the quality and strength of the beta glucan they provide. The best (and cheapest) beta glucan I have found comes as a product called Beta Max from:

**Why Are These Your First Priority?**

Taking appropriate immune system boosting products will almost certainly **insure** that your cancer will **not recur**. Without this treatment, continued after you are declared “cancer-free,” your cancer will **almost certainly recur** months or years after completion of your “debulking” therapy.

No instruments or tests today can detect the relatively small number of cancer cells that **always remain** after conventional treatment. Those cells are, by definition, the **hardiest**. With your immune system **destroyed by the chemotherapy**, radiation or surgery, they continue to divide in a “**cancer friendly**” environment.

**Cancer-Free – Your Guide to Gentle, Non-toxic Healing**
If you or a loved one is diagnosed with cancer, immune system boosting is **PRIORITY ONE**. Best of all, this treatment is what is known as an “adjunctive” therapy. That means it does not require you to challenge your cancer doctor to approve an “alternative” treatment. With enough study of the available research, almost any respectable doctor should cheer you on in your use these products. If he or she does not, **take them anyway**, and consider finding another doctor.

The picture I would like you to keep in mind is the one below. Bob Davis (more on him later), another cancer crusader sent it to me. There are over 150 different types of cells in your immune system. One of the most important for cancer patients is the Natural Killer (NK) cell. There are millions of these in your body, but you can be assured that yours were not active enough or you would not have “gotten” cancer. The products described above activate your NK cells and make them rapacious killers of cancer cells. Here’s the picture, along with Bob’s message:

Hi Bill,

On the right side of the page is a picture of a NK cell, (lower left in the picture), as it injects it’s venom into the cancer cell on the upper right. The picture is from a site of the Cancer Foudation of West Tennessee.

The picture on the left shows the residue of a cancer cell that was destroyed by a Natural Killer cell. It has been exploded into bits. It has been shown that if we follow a proper diet, we should never develop cancer, regardless of our exposure to cancer causing chemicals and bright sunlight.

**Where’s The Proof?**

You may be wondering why I don’t cite more scientific papers and “clinical” studies on the products I recommend. Basically, the reason is that nobody who sells a product that is in the “public domain” (i.e. that is able to be compounded and sold by anyone) can afford to spend the $200-500 million typically spent by drug companies to “test” a new synthetic drug.

Some of these products (MGN-3, Oncolyn, PolyMVA) are patented. That means they can be sold at a much higher price than those that are not patented. Price,
in my experience, does not correlate at all with efficacy. In other words, you
don’t necessarily “get what you pay for.”

Most of the “evidence” you’ll find on the products mentioned in this book is
what’s called “anecdotal.” Someone has tried it (usually thousands of people)
and found that it worked. Is this good enough? Well, since almost all of these
products are harmless at any dose, I’d say that’s good enough to give them a
try. It’s your judgment call.

Are there scams in the “natural” health product business? You bet. Do all the
“natural” health products have in them exactly what it says on the bottle. Sorry,
they don’t. In my opinion, your best insurance of getting an effective product is
the integrity of the source. That’s why I recommend sources like Our Health
Coop, Garden of Life, Swanson Vitamins and Green Supreme.

Actually, dozens of research papers on beta glucan (and other substances like
antioxidants) are available on the Internet. If you are interested in an example,
go to:

Search for “glucan and macrophage.” Warning: You will find the typical dense
prose of research scientists in these papers, such as: “Surface expression of
phosphatidylerine on macrophages is required for phagocytosis of apoptotic
thymocytes.” Maybe you’d just as soon take my word for it. [Chuckle!]

**Flaxseed Oil & Cottage Cheese – The Budwig Diet**

Following is a reprint of an article that appeared in my “Cure Your Cancer”
newsletter on July 16th 2002. For the first and last time in 40 months of
publishing this newsletter twice a month, I devoted the entire newsletter to this
subject. See if you agree with me on its pertinence to you or your loved one as
an effective and inexpensive treatment.

In my research, I have run across Dr. Johanna Budwig’s name several times. I
always glossed over it when I heard her “formula” – a little flaxseed oil mixed
with cottage cheese.

**Bad decision!!**

Thanks to one of you, my faithful readers, I was introduced to the FlaxseedOil2
chat group. More about them in a minute. Here is a quote that I hope will rivet
your attention on this topic.
An Oncologist Speaks

Dr. Dan C. Roehm, M.D., FACP, an oncologist and former cardiologist wrote an article in 1990 in the "Townsend Letter For Doctors & Patients." He said:

"This diet is far and away the most successful anti-cancer diet in the world. What she (Dr. Johanna Budwig) has demonstrated to my initial disbelief but lately, to my complete satisfaction in my practice is: CANCER IS EASILY CURABLE. The treatment is dietary/lifestyle, the response is immediate; the cancer cell is weak and vulnerable; the precise biochemical breakdown point was identified by her in 1951 and is specifically correctable, in vitro (test tube) as well as in vivo (real).

I only wish that all my patients had a PhD in Biochemistry and Quantum Physics to enable them to see how with such consummate skill this diet was put together. It is a wonder. The champagne vehicle IS easier to assimilate and get someone almost on their death-bed going again. A retention enema of 250 ml (8.5 oz) of oil is another route to get this precious life-furthering, ELECTRON-RICH oil into the body. It can also be applied to the skin for transdermal absorption.

You will have to remain on this diet for a good 5 years, at which time your tumor may have disappeared. Persons who break the rules of this diet, Dr. Budwig reports, (i.e. eating preserved meats, candy, etc.) will sometimes grow rapidly worse and cannot be saved after they come back from their spree (bon-bons mean bye-bye).

In 1967, Dr. Budwig broadcast the following sentence during an interview over the South German Radio Network, describing her incoming patients with failed operations and x-ray (radiation) therapy:

'Even in these cases it is possible to restore health in a few months at most, I would truly say 90% of the time.'

This has never been contradicted, but this knowledge has been a long time reaching this side of the ocean, hasn't it? Cancer treatment can be very simple and very successful once you know how. The cancer interests don't want you to know this.

May those of you who have suffered from this disease (and I include your family and friends) forgive the miscreants who have kept this simple information from reaching you so long.
Did you see that Dr. Roehm is an oncologist and cardiologist? His views are based on his own observations of patients in his practice. Also note that Dr. Budwig’s 90% figure does **not include chemotherapy recipients**! Don't lower your odds by taking chemotherapy.

Here's another quote from a noted doctor:

"A top European cancer research scientist, Dr Johanna Budwig, has discovered a **totally natural formula** that not only protects against the development of cancer but people all over the world who have been diagnosed with incurable cancer and **sent home to die** have actually been **cured** and now lead normal healthy lives.

*Robert Willner, M.D., Ph.D.*

**The Magic Bullet?**

Have I abandoned my position that there is **no single cure** for all cancers? No. However, would I sit up and take notice of this particular treatment if I were you? Darn right! I hope you trust me enough by now to know that I would not emphasize anything to this extent unless I was **thoroughly convinced** that you should try it. I am eating it every day.

**What Is It?**

It's so simple that it seems ridiculous. After 30 years of research on fats and their effect on our cells, Dr. Budwig came up with **cottage cheese and flaxseed oil** as an effective preventative **AND CURE** for cancer and many other ailments.

Flaxseed oil/cottage cheese, or **FO/CC** as it is referred to on the chat group, is very simple to prepare. You simply mix one cup of organic cottage cheese (**no preservatives**), low fat, with **2-5 tablespoons of flaxseed oil**. Both ingredients are readily available at any health food store.

Organic yogurt (with live cultures) is a suitable substitute for cottage cheese (known as “quark” in Europe), according to Dr. Budwig. She says that using yogurt, you should **triple the amount**. In other words, use about 3/4-cup yogurt to every tablespoon of flaxseed oil [you have to eat a lot more of it].

I add a package or two of Stevia as a sweetener and some almonds, walnuts, strawberries, blueberries or all of the above. It makes a tasty “smoothie.”
Dr. Budwig says you can use a blender (pouring the FO/CC in **AFTER** it is well blended by hand) and then add any fresh fruits you like for flavor -- bananas, strawberries, red raspberries (remember ellagic acid?) -- and even nuts, but **not peanuts**.

**Why Does It Work?**

The theory behind this odd combination? Dr. Budwig says the absence of **linoleic acids** in the average Western diet is responsible for the production of oxydase, which induces cancer growth and is the cause of many other chronic disorders. The use of oxygen in the body (one of the best ways to "erase" cancer cells) can be stimulated by **protein compounds of sulphuric content**, which make oils water-soluble and which are present in cheese, nuts, onion and leek vegetables such as leek, chives, onions and garlic, and **ESPECIALLY COTTAGE CHEESE**.

The flaxseed oil and the cottage cheese (or yogurt) must be **blended and eaten together** to be effective. They are synergistic. In other words, one triggers the healthful properties of the other. It is important to keep the oil in the refrigerator in the dark bottle it comes in after it is opened. Light and heat quickly make it rancid. I buy six bottles at a time (about three months worth) from Swanson Vitamins. I keep the unopened bottles in the pantry. In over two years of use, I have had no problems with any rancid oil.

So, you just eat the FO/CC mixture and wash it down with a Whataburger, french fries and a chocolate shake...**NOT!** As you might expect, the FO/CC is part of a lifestyle change that emphasizes food that is **not processed** and contains no **"hydrogenated" anything**. In addition, absolutely forbidden are:

- Sugar
- All animal fats
- All salad oils (including commercial mayonnaise)
- All meats (chemicals and hormones)
- Butter
- Margarine
- Preserved meats (the preservatives block metabolism even of flaxseed oil)

Dr. Budwig's formula includes a **complete diet plan**, including a flax oil "spread," which can be used with fruits, vegetables, potatoes or grains such as rice, buckwheat or millet. It can also be added to sweet sauces and soups. There is also flax oil "mayo" which can be used for salads or healthy sandwiches.

To get all the details on Dr. Budwig's diet and the "spread" and "mayo" recipes, just click on:
In a book called "Oxygen Therapies" published in 1991, Ed McCabe offers this point of view on fatty acids:

"The red blood cells in the lungs give up carbon dioxide and take on oxygen. They are then transported to the cell site via the blood vessels, where, they release their oxygen into the plasma. This released oxygen is 'attracted' to the cells by the 'resonance' of the 'pi-electron' oxidation-enhancing fatty acids. Otherwise, oxygen cannot work its way into the cell. 'Electron rich fatty acids' play a decisive role in respiratory enzymes, which are the basis of cell oxidation...

Don't eat anything hydrogenated (like margarine or fried foods) as it defeats oxygenation. Avoid products that say 'hydrogenated.'

We should eat essential polyunsaturated fatty acids to enhance oxygenation. They can be found naturally in carotene, saffron, and FLAXSEED OIL."

Dr. David Williams, my favorite health guru, added four essential fatty acids (EFAs) to his Daily Advantage formula (see Chapter 2 above) in 2003. An article in his newsletter urges us to drastically increase our intake of Omega-3 fatty acids, the exact formula of flaxseed oil.

Here's a quote from a "promo" I received recently on it:

"In case you haven't heard the great news, Dr. Williams just added a powerful, new Essential Fatty Acids (EFAs) complex to Daily Advantage. These EFAs, particularly the omega-3s, are critical for your cardiovascular system, cholesterol, blood pressure, brain function, immune system, joints, and just about every other system in your body."

Don't concern yourself with the difference between Omega-3, Omega-6 and Omega-9 fatty acids. Just realize that Omega-3's should be about one to one to Omega-6's in your diet for your body to work properly. The ratio of our "normal" diet today is one or none Omega 3 to 20 or 30 Omega 6.

Dr. Budwig's work has confirmed that this imbalance, caused by the "hydrogenated" fat in processed food, margarine, etc. is the cause of most infirmities we suffer from. Several studies have shown that our typical Omega-3
level in our bodies is 80% below normal. The flaxseed oil, when mixed with
cottage cheese or yogurt, restores that balance...period. End of scientific story.

...But Does It Really Work?

Being skeptical of any new idea that makes bold claims is healthy. When you
have cancer, it is essential. I was quite skeptical of this treatment at first. I joined
the chat group and pawed my way through the 20-25 e-mails a day. You may, of
course, do the same, if you are so inclined. All you have to do is send a blank e-
mail to:

FlaxseedOil2-subscribe@yahoogroups.com

Maybe I can save you a lot of trouble. After reading the messages of this group
for about three weeks, I became thoroughly convinced that they are onto
something significant for ALL cancer patients.

First, almost all of the participants are recovering from cancer and other
diseases (strokes, diabetes, etc.). Second, all of them, without exception, are
thoroughly convinced that their recovery is the result of the Dr. Budwig protocol.
The founder of the chat group, Clifford Beckwith, was cured of Stage IV
prostate cancer in the early 90's by Dr. Budwig's protocol. He has been a
missionary for this treatment ever since.

Meet Cliff Beckwith – The FO/CC Guru

Here are a few [unedited] words from the transcript of an audio tape made by
Cliff Beckwith in July, 2001:

"Shortly after I found out I had trouble, we learned that a friend of ours had been
having trouble since 1987. He'd been to the doctors; they had done various
operations and tried different treatments but he didn't seem to be getting any
better.

One day my wife and I visited him and talked about the oil. He decided to use it
and began taking 2 tbsps a day [Now we know that probably was not quite
enough]. The doctor said his bladder had crystallized and lost its elasticity. He
couldn't stay out of the bathroom for 15 minutes. He couldn't go to church or
carry on other normal activities. The doctor said it was a condition he'd just have
to live with.

One day he went to the doctors for a physical and he told his wife that if he didn't
get a good report he was going to quit using the oil. The doctor examined him
and said, 'Mr. C, you've had cancer in your bladder but it's gone. The bladder is
elastic again and everything is back to normal.'

In December 1993 we were having a tree cut and the contractor and I were discussing the oil. His assistant said, 'I've heard of that. I knew a man out west who found out he had colon cancer. He didn't let the oncologist do anything. He just used Flax oil and cottage cheese and the tumors disappeared.'

I have a cousin in California who lost his wife to cancer a number of years ago. He is militantly trying to get American doctors to look at this approach. He's talked to a group in Spain using an Omega-3 approach that is getting a 95% cure rate. Nothing in American medicine approaches that degree of success.

In 1994, I talked to Dr. Budwig. She said 'I have the answer to cancer, but American doctors won't listen. They come here and observe my methods and are impressed. Then they want to make a special deal so they can take it home and make a lot of money. I won't do it, so I'm blackballed in every country.'

Dr. Budwig has been nominated for a Nobel prize 7 times, but her methods have incurred the wrath of the establishment and she is passed over. Especially upsetting to the conventional cancer establishment is her refusal to use radiation or chemotherapy.

In the vast majority of the cases we have known about, there has been apparent recovery. Where it has not been successful, those with cancer have not used enough in the first place, or switched to Flax flakes or capsules.

Capsules scare me. In the first place, it takes a number of capsules to make a tbsp. and the sulphur-based proteins are still needed. Also, bottles of capsules are likely to sit around on shelves at room temperature. I know of one man who was quite badly off and began using the liquid oil and began making dramatic improvement. About a year later, I learned that he had died. I later learned that he had switched to capsules.

In a Christmas letter in December 1993, we heard that a friend of ours in Wooster, Ohio, was having a bout with ovarian cancer. The blood test for that condition is CA 125 and the normal is 35 or below. Her count was 75. Later I learned she'd visited my sister in September and was very apprehensive. She'd had about four rounds of chemo and couldn't take that. We sent information about Flaxseed oil in our Christmas letter.

Joanie is an RN and she and her husband had been missionaries in Sri Lanka. They bought the books and started using Flax oil. In February she was feeling fine. On May 12, 1994, she had a checkup and the count was 2 and she was praising the Lord. In October 1994, she had another physical and now the count was 1. Since then there's been no further indication of cancer.'
If you would like to read more of Cliff Beckwith's account, including dozens of other examples of **proper and improper** use of this treatment, just go to:

[http://www.beckwithfamily.com/Flax1.html](http://www.beckwithfamily.com/Flax1.html)

If you want a free copy of the audiotape, send Cliff an e-mail. His e-mail address: spinner@usit.net

**What Does It Treat?**

Dr. Budwig's formula has been used therapeutically in Europe for prevention and treatment of: Cancer; Arteriosclerosis; Strokes; Cardiac Infarction; Irregular Heartbeat; Liver (fatty degeneration); Lungs (reduces bronchial spasms); Intestines (regulates activity); Stomach Ulcers (normalizes gastric juices); Prostate (hypertropic); Arthritis (exerts a favorable influence); Eczema (assists all skin diseases); Old Age (improves many common afflictions); Brain (strengthens activity); Immune Deficiency Syndromes (multiple sclerosis, autoimmune diseases such as lupus).

**Some Testimonials**

Here are some more testimonials.

**Siegfried Ernst, M.D.**

Seventeen years ago Dr. Ernst had developed cancer for which he had major surgery requiring removal of his stomach. Two years later he had a recurrence of the cancer and was offered chemotherapy as the only available remedy. There was little hope for survival as virtually all individuals with recurrence of this type of cancer rarely last a year.

Dr. Ernst knew that chemotherapy was not only ineffective for his type of cancer but completely destructive of the quality of life, so he refused. He turned to Dr. Budwig and her formula for help. He religiously followed Dr. Budwig's formula and fifteen years later has not had any recurrence of cancer. He is in perfect health and is tireless for a man in his late seventies.

**Maria W.**

Maria W. tells her story in her own words: "I was told by the most expert of doctors that I would have to be operated on to cut out the cancerous tumor that was causing a swelling under my eye. They explained that the size of the tumor was much greater inside and that there was very serious bone involvement. The
malignancy was too far advanced to respond to radiation treatment. The doctors planned to remove considerable facial tissue and bone. I was afraid for my life, but being a young woman, couldn't bear the thought of such disfigurement.

When I heard about Dr. Budwig's natural formula, I was skeptical but desperate for help. After four months on this regimen, the swelling under my left eye completely disappeared. The doctors at the University hospital gave me many exhausting tests. One told me, 'If I didn't have your previous x-rays and medical history in front of me, I wouldn't believe that you ever had cancer. There is hardly any indication of a tumor remaining.' I never thought using Dr. Budwig's formula would be so successful. My whole family and I are very grateful."

Sandy A.

An examination of Sandy A. revealed arachnoidal bleeding due to an inoperable brain tumor. The doctors informed Sandy that he was beyond medical help. At his expressed wish, Sandy was discharged from the hospital and sent home to die in peace.

A friend brought Dr. Budwig's formula to Sandy's attention. Sandy writes:

"Since I went on the Budwig regimen, the paralysis of my eyes, arms, and legs has receded daily. After only a short period of time, I was able to urinate normally. My health improved so rapidly that I was soon able to return to my work part-time. Shortly after that, I was again examined at the Research Center and my reflexes were completely normal. The Budwig diet saved my life! Ten years later, I was given a thorough examination at the Center as a follow-up. My incredible recovery has been written up in many medical journals and I have become what they call a 'textbook case,' and all because of Dr. Johanna Budwig's simple diet."

Timmy G.

Seven years ago Timmy G. was diagnosed as having Hodgkins disease. The child was operated on and underwent 24 radiation treatments, plus additional experimental therapies that the experts hoped would be of some small help.

When Timmy failed to respond favorably to these heroic measures, he was discharged as incurable, and given six months to live and sent home to die.

The desperate parents contacted specialists all over the world. A famous newspaper took up Timmy's cause and ran editorials pleading for someone to come forth who could offer hope for the life of a child. All the specialists who replied confirmed the cruel prognosis: There was no hope or help for Timmy.
At this dark hour the miracle the family had prayed for happened!

Timmy's mother told her story to the press: "A friend sent me a printed piece about one of Dr. Budwig's speeches. This material gave us hope and I contacted Dr. Budwig.

In just five days, (on the Budwig regimen) Timmy's breathing became normal for the first time in almost two years.

From this day on, Timmy began to feel good again. He went back to school, started swimming and by winter he was doing craftwork. Everyone who knows him says how well he looks."

At age 18 Timmy is showing great promise in his university work. He knows he owes his life to Dr. Budwig and thanks her daily in his prayers.

Whatever Happened to Dr. Budwig?

As for Dr. Budwig herself, she just turned 100 and is going strong. She lectures on this subject all over Europe. She has been nominated for seven Nobel prizes during her 50 plus years of advocacy and treatment of cancer patients. Influential members of the allopathic medical community and the food processors have always blocked her award of that deserved honor.

In Summary

Don't quibble. Don't put this off. Don't "wait to tell your doctor." In short, just do it!!

It's food. It costs nothing. It replaces one to two meals a day. It can't hurt you, unless the oil is rancid, which is pretty obvious. It'll smell. If it smells or tastes awful, don't use it. Take it back and get some fresh oil.

Lots of trivia on the chat board...high lignan oil vs. plain oil; ground flax seeds in addition to the oil or not; mix it by hand or in blender; flavor it with....well, you get the idea. None of the people above worried about this stuff. They just ate the mixture and got well.

Here's How

It's simple: Just buy 1% organic cottage cheese or "plain" yogurt (with live cultures). Both should be without preservatives of any kind, so we're talking health food store, not supermarket. Buy the flaxseed oil (it's also called "linseed
oil"), high lignan or not. Be sure the oil is fresh and cold, says "cold pressed" and is in a dark bottle. You can buy it at a great price online at:

http://www.swansonvitamins.com

Mix 5 or 6 tablespoons of the oil (shake it first if it is "high lignan") with 1 1/2 cups of the cottage cheese or 4 1/2 cups of the yogurt. Once it is thoroughly mixed by hand (or with an electric beater - not in blender), add whatever fruit or nuts (no peanuts) you like for flavor and put the whole thing in the blender to make a smoothie. Refrigerate it and eat it throughout the day. This is a one-day dose for a cancer patient (any stage, any type of cancer).

Next, take a look at Dr. Budwig's diet. See Chris Turner's article "Budwig Flax Oil Diet" at:

http://www.positivehealth.com/permit/Articles/Nutrition/turner60.htm

Don't continue on your "normal" diet and expect to get well. This is a lifetime commitment. If you drop it after the 3-12 weeks it takes to cure you, you will be very sorry. Don't do that!

For a lot more information, try this web site:

http://www.shirleys-wellness-cafe.com/flaxoil.htm

Want to read some books? Here are several for you:

"Flax Oil As a True Aid Against Arthritis, Heart Infarction, Cancer and Other Diseases," by Dr. Johanna Budwig. Amazon price: $6.95. Also available at the web site above for $5.56, but their shipping charge is about $6.50!

"The Oil Protein Diet Cookbook," by Dr. Johanna Budwig. Amazon price: $10.36. Dr. Budwig gives you lots of great recipes to make her protocol "user-friendly."

Dr. Matthias Rath – Vitamin C & Lysine/Proline
The next treatment I would add to my cancer-fighting regimen is a mixture of Vitamin C, l-Lysine and l-Proline. The latter two are common amino acids. As I mentioned above in Chapter 1, this combination was discovered by Dr. Matthias Rath and Dr. Linus Pauling in the mid-1980’s. They later strengthened this compound by adding green tea extract. They found that this combination inhibited the process of metastasis of cancer cells. You can study this concept in detail at Dr. Rath’s web site:

If you have cancer, one of your first priorities is to slow down or stop the process of metastasis (spreading of cancer cells to other parts of the body). Metastasis and its effect on organs, blood, brain, bone marrow, etc. is what kills cancer patients.

There are several reasons I recommend this compound as a primary treatment. Like the first two treatments, this one is gentle, non-toxic, and readily available. Like the FO/CC, this one is also inexpensive. Not from Dr. Rath, but from Our Health Coop. More on that in a minute. And finally, it gives you a “bonus” of protection from or treatment of heart disease.

None of the ingredients in Dr. Rath’s formula are expensive. In fact, they are abundant and readily available. Nevertheless, his products (he has several) are all quite expensive. The reason is marketing. Like the drug companies, Dr. Rath spends a lot of money marketing his products.

With the effectiveness of this product for not just cancer, but also heart disease, being publicized for 20 years, there were bound to be copycat products developed. As I mentioned above, the only way to evaluate these products is the integrity of the source. Fortunately for you, there is a really inexpensive option competing with Dr. Rath’s products (“Epican Forte,” etc.).

Our Health Coop, my favorite source for inexpensive (wholesale + 5%) natural products, sells something called “Heart Plus.” The ingredients are Vitamin C, l-Lysine, l-Proline and Rose Hips. Except for the green tea extract, it is virtually identical to Dr. Rath’s Epican Forte. Of course, you can find the green tea extract separately at very reasonable prices.

The Our Health Coop price for Heart Plus is (drum roll, please) $9.45. Is that for one day? No, that’s for 180 tablets (about a 30-day supply). Dr. Rath’s product is about 5-6 times that price.

You can read about the theory behind Heart Plus and heart disease at:

Since heart disease is the number one killer and cancer is number two, this product gives you a “double whammy.” It is much more effective than a cholesterol-lowering “statin” drug with no side effects.

Notice that I devote much less space to Dr. Rath’s compounds than to the FO/CC and immune system stimulants. Please don’t interpret this as meaning they are less important. The only reason I can shorten the discourse is because Dr. Rath has such a wonderful web site, complete with free PDF e-books and video tapes in four different languages. Study his materials.

A Cancer-Fighting Diet

Next in order of importance for you, the cancer patient, is a radically different diet. It is almost certain that if your diet had been perfect, you wouldn’t have cancer. None of us eat the perfect diet. But now, you must! No kidding.

Patrick Quillin – A True Expert

You don’t have to take my word for it. Just read the best book on the subject I have found. It is “Beating Cancer With Nutrition” by Patrick Quillin. It is available from amazon.com for $24.95 (with used copies for much less). You will not find any better bargain anywhere.

Nutritionists

Obviously, if you can afford it, the advice of a nutritionist is ideal. There are many of them and they use different tools (live blood cell analysis, infra-red scans, hair analysis, Ph testing, etc.). They are not cheap. Patrick Quillin is cheap.

Let me mention one thing you need to know about nutritionist advice. It will be paid for by Medicare if you have been diagnosed with:

1. Diabetes
2. Kidney disease
3. Organ transplant follow-up

This is the result of a law passed by Congress effective January 1st 2002. If your doctor is not aware of this, have him/her check with Medicare. You may be able to get nutrition advice (and even some of the products and treatments) paid for by Medicare. Why they did not include cancer on the above list is anybody’s guess.
Another interesting article on nutrition and cancer, especially the importance of vitamins, is at:

http://www.DoctorYourself.com/cancer_2.html

Dr. Dana Flavin-Koenig

One of the most interesting members of my vibrant network of cancer fighters is Dr. Dana Flavin-Koenig. She is an American living in Germany. She describes herself as a "physician, toxicologist, pharmacologist and nutrient biochemist." She has doctorates in three of those fields. She was chief toxicologist for the FDA for two years in the late 1970s.

What is important to us is that she has been researching the molecular biology of cancer since 1979. She has found that many nutritional substances can inhibit specific functions in cancer cells. We'll look at some examples of her discoveries in a minute.

An Advisor to the NCI

Dr. Flavin-Koenig is an advisor to the National Cancer Institute (NCI) in the U.S. She is working on a data bank for the NCI that will catalog the molecular biology of each cancer type along with a central information source for new treatments.

She treats numerous cancer patients successfully in Europe. One of them was one of my readers in Ireland, who gave her my e-mail address. Dr. Flavin-Koenig called me in August 2002. We talked for over an hour. Since then, she has sent me several long e-mails describing her successful treatments.

I'm going to give you Dr. Flavin's list of foods to avoid and foods to eat. One or two items (soy, for instance) on this list are controversial. But, in general, this list matches others I have seen from natural cancer treatment experts.

Foods To Avoid For Cancer Patients

SUGAR!!!!
- All drinks with sugar or phosphorus (e.g. soda pop, colas, soft drinks)
- Candies, cakes, cookies, etc.
- Ice cream
- Chocolate
White flour
Beef
Pork
All organ meats (brain, stomach, testicles, heart, etc.)
Sausages, bacon, cold cuts (except those from chicken or turkey WITHOUT nitrites)
Unsaturated fatty acids (corn oil, sunflower oil, etc.)
Margarine
Fried foods
All fast foods
Potato chips, corn chips, tortilla chips, etc.
Coffee
Cigarettes (duh!)
Nitrates/Nitrites (in lots of processed food)
Iron supplements
Zinc supplements
Vitamin B supplements (except B-12 twice a week)
Amino acid tablets like ornithine, arginine, glutamine, tryptophan, histidine...

That's it! Think that leaves you starving? **No way!**

*Foods To Eat For Fighting Cancer*

Organic chicken and some turkey
Fish (especially salt water types)
Natural rice
Hard cheeses
Seeds and nuts
Almonds
Bitter almonds
Oranges and lemons (and fruit juices without sugar, fresh is best)
Figs
Apples
Grapes
Pineapple (very, very good)
Carrots and carrot juices
Parsley
Tomatoes
Broccoli
Cauliflower
Peppers (red and yellow)
Sprouts (especially wheat)
Onions
Chives
Garlic
All salads, leeks, potatoes
Root plants in general
Shiitake mushrooms
Maitake mushrooms
Vegetables of all sorts
Soy products (all are excellent-they block hormone receptors and growth receptors)
Whole grains
Wheat bran
Yogurt (without sugar)
Lentils (all types of beans - mung, garbanzo, etc. They contain metastasis inhibitors)
Olive oil
Butter
Mineral water with high sulphur level
All herbs (curcumin is excellent)
Sesame
Green tea, black tea, nettle tea
Black kummel
Honey with honeycomb

That's all she mentioned. However, remember this lady has not met Dr. Johanna Budwig, the other wonderful German doctor of cottage cheese/flaxseed oil fame [see above]. So, keep taking your CC/FO, by all means. Also, Stevia (available in any health food store) is a fine sweetener for anything – no aspertame, MSG or other harmful substances.

The “Stockholm Protocol”

Before we go any further, I need to tell you about a nutritional prevention and treatment regimen called “The Stockholm Protocol.”

In April, 1998 a study by researchers at the Wayne Hughes Institute in St. Paul, Minnesota reported their results with a new treatment they call "EGF-Genistein."

According to their study published in Clinical Cancer Research, Genistein actually reversed human breast cancer in mice and was found to be safe in small animals and monkeys.

What is Genistein? It's found in soy (soybean products) - tofu, soymilk, soy flour etc. (but not soy sauce). Could this be why breast cancer is rare in Oriental women (unless they live in the U.S. and eat our diet)?

Genistein is an isofalvone with steroid-like properties. Another study by Dr. Walter Troll at the NY University Medical Center showed breast cancer incidence in mice was reduced by 50% using Genistein. Another study by Dr. Coral A.
Lamartiniere of the University of Alabama found the incidence of mammary tumors in mice were reduced by 40%. He told an NCI symposium, "This study is the first to show in vivo that Genistein can protect against chemically induced cancer."

The same mechanism found in breast cancer cells is also seen in **prostate, ovarian, bladder, liver, lung and melanoma** cancers. Thus, the researchers believe that Genistein will also be effective against those cancers as well. In fact, Memorial Sloan Kettering researcher William Fair, M.D., is now studying Genistein and other nutrients in a clinical trial on prostate cancer at the normally conservative and conventional NYC institution. Remember how many drug company executives are on the Sloan Kettering Board of Directors?

Further, Dr. Karl Folkers of the University of Texas and a team of researchers in Europe reported that **changes in diet** and a specific list of nutrients **eliminated breast cancer** and prevented its recurrence. They called it the "**Stockholm Protocol.**"

If you are interested in information about diet, nutrition and the Stockholm Protocol, you need to join **People Against Cancer**. Check out their very interesting website at:

http://www.PeopleAgainstCancer.com

Incidentally, these diets are not just for prevention. They are also for **treatment** of active cancers.

**Diana Dyer**

If you’d like another slant on this subject, take a look at **Diana Dyer's** website. It's at:

http://www.DianaDyerMSRD.com

Diana self-published her 54-page cancer and nutrition booklet in 1997. It's called "**A Dietician's Cancer Story.**" At one time, it was the best-selling cancer and nutrition book on amazon.com.

The former hospital dietician decided to learn everything she could about cancer and nutrition after a 1995 breast cancer diagnosis. Then she began testing recipes to see how realistic they were. She developed dozens of healthful, easy-to-fix meals. Particularly popular are her "SuperSoy" and " PhytoChemical" shakes.

Dyer, a mother of two, credits the diet and daily exercise with keeping her free of
Cancer for the past nine years. She has set up an endowment with proceeds from the booklet to help underwrite research about how good nutrition can prevent the recurrence of cancer. For the full story of this remarkable lady, check out the website above

Summary On Diet

The more I read, the more convinced I become that what we put in our mouths, more than any other one thing, is the cause of any original cancer episode and of recurrence. We’ve talked a lot in these pages about supplements and we’ll soon discuss enzyme therapy. Certainly, many of these substances can contribute to your recovery. However, the best and cheapest way to restore your body's metabolism to its natural balanced state and regain your health is to eat right.

Do you realize?

- The average American consumes 152 pounds of sugar per year! Don't believe it? Just take a look at your pantry. All that sucrose, corn syrup, caramel color and fructose is just sugar in disguise.

- Acrylamide, a proven carcinogen (cancer causing agent), is only allowed in your drinking water at a level of 0.12 micrograms per serving by the Environmental Protection Agency (EPA). McDonald's French Fries, large, 6 oz. serving, contain 72 micrograms or 600 times the EPA limit. Burger King, Wendy's, KFC, etc. are just slightly lower. Still want that “super size?”

- The processed food we eat has had virtually all the good nutrients, plus all the digestive enzymes, processed out of it. Our bodies can't produce the enzymes needed to digest this stuff [see below].

- The Standard American Diet (SAD) is highly acidic. In a 300-page book called "The pH Miracle," Dr. Robert Young, a microbiologist and nutritionist argues convincingly that the most important marker of good health is the pH level. We'll discuss this in detail later.

.....and there's lots more evidence that we eat ourselves into degenerative disease.

Greens and Enzymes
Bob Davis Whips Cancer

In November 2001, I discovered Bob Davis and his story. He has inspired me. But he has also furnished me with a ton of information about Complementary and Alternative Medicine (CAM) treatments for cancer. He will share them with you, too. Here, in his own words, is his story:

"I'm 83 years old, and I've overcome cancer twice!

In April 1996, I went to the hospital as an outpatient for an x-ray. They found that I had massive cancer. I had a mass in my abdomen a foot wide and several inches thick. Further, I had several masses in my chest, some of them 'the size of soft balls.' It was also determined that I had cancer in my bone marrow. I was immediately converted into an 'in' patient and started on a very heavy chemotherapy program. I had chemo in April, May, and June, with no effect on the cancer. It seemed to thrive on the stuff.

It was the middle of June when my doctor told me that the chemo wasn't working. He later told me that another treatment would kill me. I knew that this was true because my body was ravaged by the chemo. I was curled up in a fetal position unable to sleep or eat. I was emaciated and had excruciating pain all through my body.

I asked my doctor what we were going to do. He said, 'Try.........something else.'

The previous February I had called a college chum who had devastating arthritis. He couldn't climb stairs or drive his car. I asked him how he was doing and he said 'Fantastic!' He told me that he was taking an herbal product and it had eliminated his arthritis in three weeks. I asked him what it was and he said 'Dried green barley leaves.' He gave me the 800 number and I ordered a bottle for my wife who has arthritis.

It was the middle of June as I mention above, that I received a phone call from the owner of the company that provides the dried green barley pills [Florence Biros]. She asked me how I was doing on the pills. I told her that I wasn't using them. I had gotten them for my wife and they helped her when she remembered to take them.

I then said the most fortunate thing I have said in my life. I said, 'I'm fighting another battle.' She asked me what it was and I told her that it was cancer. She said, 'Oh, Mr. Davis, You don't know do you?' I asked her what was it that I didn't know and she said, 'Don't you know that cancer and arthritis can't grow in an alkaline body?' I told her that I had never heard that before. To make a long story short, I started taking the pills and in ten days my cancer was 95% gone! My next CT scan showed no cancer in my body and I have been cancer free.
ever since.

I was checked last month and I am still cancer free. I still take 20 200 mg. tablets of dried green barley every day. It costs me a whopping 95 cents or so.

Since then I have adopted a 95% (I do have birthday cake with a grandchild now and then) vegan diet that I really like. I feel better than I have in 40 years. People say I look younger. I have 'lotsa' energy.

I am eager to share information on cancer treatment and general health issues. I do occasionally speak at meetings on several related subjects. My favorite subject is ENZYMES!!!!

Bob Davis
Alternative Cancer Treatment Support
Feel free to contact me at ACTS@ptcom.net"

Bob means it. If you want more information from him, he has it and will share it with you. He calls himself a reporter, not an adviser. Just send him an e-mail. He recently completed a web site. Check it out at:

http://www.cancer-success.com

He has been communicating with other cancer patients for seven years. He sent me copies of 40 e-mail messages on a wide variety of CAM topics. Much of it was news to me. He has said I can share any of it I like with you. I am doing just that in this edition of my book.

Like another 83-year-old cancer survivor in my network, George Freaner, Bob is a "nut" about enzymes. Their enthusiasm has convinced this young buck (hey, I'm just barely 73!) to get up to speed on enzymes. I've read most of a telephone book-sized reference book called "The Complete Book of Enzyme Therapy," by Dr. Anthony J. Cichoke. It is very interesting. Almost every malady you can think of can be traced to one or another enzyme deficiency.

There are over 3,000 different types of enzymes in our bodies. Interestingly enough, the stuff that cured Bob Davis' cancer, green barley, contains all 3,000 of them, according to the discoverer, Dr. Yoshihide Hagiwara. Even before finishing the first few chapters of the Enzyme "encyclopedia," I had my whole family, including me, on the same thing Bob took. If you want to try it, it is called "Barley Power" and is put out by a company called Green Supreme. It comes in a 200 tablet bottle for $14.99. Larger sizes are less. Order it by calling (800) 358-0777 (they're in Pennsylvania). You'll be very glad you did.
Another Source

If you would like to try a different source, go to:

http://www.ourhealthcoop.com

Look for their product called “Greens Plus.” Their 90 veggie capsules with a variety of “greens” and other ingredients sell for $8.74.

Take Enough

Bob’s experience points up one other very significant point. When you start on a therapy, be sure you take enough of it to have the effect you want. Bob takes 20 barley green tablets every day. No “half measures” for this lad (hey, he feels like a young stud of 40!).

By the way, neither Bob Davis nor I have any financial connection with Green Supreme (or any other products). I charge for my book (because I’ve found more people read it when they pay for it), but Bob's services are free.

Enzyme Therapy In Plain English

Want to read a fine article on the importance of enzyme therapy in the treatment of cancer? I have posted this article, in plain text, on my web site. Just go to:

http://www.getandstaywell.com/WhyEnzymes.htm

The Importance of pH

Remember Florence Biros. She’s the Green Supreme company owner. In Bob Davis’ account of his treatment “Don’t you know that cancer and arthritis cannot grow in an alkaline body?” What exactly did she mean by that?

Your body fluids vary somewhat throughout your day in the degree to which they are alkaline or acid [except your blood, which your body keeps within a narrow range by whatever means necessary]. The easiest way to determine whether your body is in an alkaline or acid state is to test your saliva.

At the same “800” number above I gave you for the “Barley Power,” you can order a roll or two of pH test strips. An 8-foot roll costs about $5. Every morning and evening, you can put a one-inch strip under your tongue for a couple of seconds and it will show you where you are on the alkaline to acid scale. Ideal is around 7.2, which is a slightly alkaline state.
With our typical acid diet, most of you will find that your pH is 6.4 or less. If the Barley Power or similar enzyme booster products are working correctly, this should **correct quickly to an alkaline state** (above 7.0) and stay there as long as you continue to take the “Greens” tablets, capsules or powder.

If you’d like a lot more background and detail on this subject, you will find it in the book *The pH Miracle: Balance Your Diet, Reclaim Your Health* by Robert O. Young. It is available from amazon.com for $10.47 for the paperback version or $17.47 for the hardback. As one reviewer says: “I feel Dr. Young is going after the underlying ‘cause’ of disease and not just traditionally treating an ill with a pill!”

**Dave Perkins on pH**

Here is an inspiring story. I’m not plugging any of the water products offered at this site, but I think you will enjoy reading Dave Perkins account of his recovery from “terminal” cancer. Just go to:

Dave Perkins’ sentence “Cancer doesn’t thrive in an oxygenated body!!!!” is a good segue into our next subject.

**Exercise With Oxygen Therapy (EWOT)**

A message from another prominent member of my great network of cancer researchers and crusaders, Art Brown, introduced me to a new therapy. Here’s Art’s message.

“The [EWOT] acronym stands for **Exercise With Oxygen Therapy**. A person simply spends about **15 minutes a day** on a treadmill while **breathing pure oxygen**. The oxygen under pressure is what does the trick, being forced into the body while the exercise circulates it around. There is a certain O2 pressure [6 liters per minute] required, certain vitamins to take 1/2 hour ahead of time etc. People seem to be claiming all kinds of wonderful rejuvenating effects for this treatment, especially among the elderly. Robert J. Rowen MD of California is one of its strongest proponents. In his former state of Alaska, he was primarily responsible for getting the USA’s first state-wide laws enacted that protect **alternative practitioners from relentless attack** by the conventional medical crowd.

*I can’t help but think this type of therapy might be highly beneficial to cancer patients. It is well established that oxygen is one of cancer’s worst enemies.*
Here’s more on it from the web site:

http://www.alkalizeforhealth.net/freshjuices.htm

"EWOT"

William Campbell Douglass, M.D. highly recommends EWOT. Exercise With Oxygen Therapy (EWOT) is doing light exercise, such as on a treadmill or stationary bicycle, while breathing pure oxygen. EWOT produces the benefits of hydrogen peroxide therapy and you can do it at home. Set the O2 flow at 6 liters per minute, hook the little tube to your nose, and exercise at a moderate pace for 15 minutes while breathing pure oxygen. As part of your cancer prevention and health maintenance program, do this at least once a month. If you are ill with any disease, do EWOT more frequently. In particular, do EWOT after operations, chemotherapy, radiation treatment, x-rays, and burns. Every spa, clinic and health club in the country should offer EWOT.”

Find a doctor in your area interested in oxygen therapy at

http://www.oxytherapy.com

You will find a ton of information about oxygen and ozone therapies at the above web site.

…..And here’s another web site with lots of information on this topic:

http://www.geocities.com/SoHo/Gallery/6412/EWOT.htm

Don’t miss Art Brown’s own web site. He is a cancer crusader who has written a book on the subject and has a very informative web site. Just go to:

http://www.alternative-cancer.net

Protocol/Cancell/Entelev & Graviola

In this section, I’ll introduce you to two wonderful cancer survivors. They are both a part of my cancer “network.” Both of them have indicated that they are happy to talk to you by e-mail if you have questions.

Tony Preston, Pancreatic Cancer Survivor

Tony Preston is a Senior Principal Engineer/Scientist with Lockheed Martin Corporation. Read carefully what Tony says. He is a survivor of Stage IV pancreatic cancer (usually incurable at any stage). He feels so strongly about
getting this information to other people that he has put up a web site with lots of links and Frequently Asked Questions (FAQs). Here's most of his January, 2002 letter to me:

"I wanted to send you this e-mail to tell you a little about my experience. I was supposed to be dead by last December.

I have pancreatic cancer. It spread to a lymph node just as I started chemo. I received Gemcitabine and Cisplatin, but that is not what has worked for me. I don't know if you have heard of Protocol (it was called Entleve, then the FDA got involved with an injunction, then Cancell, then another injunction, then with the Food Supplement Act around 1994, it is now legally sold).

I started taking it about two weeks after I was diagnosed. I had one chemo treatment. At that point my doctor noticed that the tumor on my groin lymph node was soft on top. Over the space of 3 or 4 weeks, it went from a hard tumor to a soft mush object. It eventually broke through the skin like a boil and drained a bright yellow fluid (waste proteins from the dead cancer cells). The tumor completely dissolved.

I have other tumors in my abdomen that may still be active cancer, but it is not spreading and my doctor is not sure if they are live tumors or just lumps of dead ones that my body hasn't cleaned out.

Protocol is low cost and easy to use. I take a 1/4 tsp every 4 hours (or 1/2 tsp every 8). It costs about $90 for a 2-month supply (comes as a concentrated dark liquid).

The concept of how it works is really simple. Normal cells produce an excess of energy with their metabolism. Cancer cells are defective and produce a lot less. Protocol will lower the energy production of the cells causing the cancer cells to not produce enough to maintain themselves. They die. Normal cells, because of their excess production, are hardly affected.

It is totally non-toxic (been tested) and the only side effect normally is to get flu-like symptoms for a few days when you first take it. I am looking forward to reading your book and also am a collector of information. I have my own web page that has some links with more information you might want to look at. It is:

http://mywebpages.comcast.net/apreston/CancerFAQ.html

Tony Preston
SR. Principal Engineer/Scientist
Atlantic Sciences and Technology Corp.
Lockheed Martin NE&SS
By all means, visit his web site. Ignore the cosmetics. He says it is under construction. However, he does cover, in detail, his experience with Protocel, the sources, the exact dosage, and the history of the testing of this substance. He even has a month-by-month “diary” which is very interesting (including his wife’s strenuous objections to his taking the Protocol).

Don’t miss the link he calls the "Conspiracy." It links to Paul Winter’s web site. Paul’s site is totally non-commercial. The only thing he sells is a “test kit” which you can use to test the efficacy of the dozen cancer treatment products in it. It uses the principle of “applied kinesiology.” You may be skeptical about this process, as I was. But every time I give a workshop and mention it, at least three people say “It works, Bill.” If you’d like to go directly to Paul Winter’s site, just click on:

http://alterantivecancer.us/treatments.htm

Among other things, Paul’s site covers in great detail the cover up of the actual National Cancer Institute testing of Protocel and other evidence by NCI and other government agencies and private corporations.

Bottom line: We’re all in this together, folks...and we must learn from each other. You can’t rely on any sources in the traditional medicine system to give you the information you need. Scary, I know, but true!

Latest Update from Tony Preston

On December 26 2002, I received the latest update from Tony.

“…a small update on my ‘condition.’  Here it is a year after I am supposed to be dead...;)  I use Protocel and Graviola. Now, since I did not die on schedule, my doctor is saying I must not have had Pancreatic Cancer at all and now the type must be ‘pseudomyxoma peritonei’ as a possibility (false mucinous tumor of the peritoneum). It does fit some of the symptoms better than Pancreatic Cancer does (I was Stage IV, had a tumor on a lymph node which Protocel got rid of...). After all, nobody survives very long with Stage III pancreatic cancer, let alone Stage IV...

Well, I am sure that in a few months, a year, they will be ‘updating’ my condition to a new type that fits my current survival...
The funny part of all this is that they are basing it on the growth rate of the tumors (mostly not growing at all). They refuse to believe that Protocel or Graviola have any effects or benefits and so look at only half the information.

I am an electrical engineer and if I only looked at half the circuit, I would also be lost to find out why it did or did not work!

Best regards.

Tony Preston
Cancer is Curable, Ask me why!
apreston@comcast.net
2002-12-26

Steve Finney – Protocel & Graviola

Next I would like you to meet Steve Finney. Steve is a Major Account Manager for Cisco Systems. Here is his letter to me:

"Bill - Just a note of thanks for your 'labor of love' and for your ongoing work despite losing Marjorie. You must be a great friend to many people. I stumbled on your site after searching info on Graviola, as the many folks I am involved with who use Protocel (aka Cancell) have recently been made aware of this amazing extract from the Brazilian rainforests."

[I'll give you some details on Graviola and Paw Paw in the next section.]

Steve's letter continued:

"I am 39 and was diagnosed with Stage 3 Anaplastic Astrocytoma brain cancer about 16 months ago, and after taking Protocel for only 5 months, the tumor is absolutely dead and does not enhance whatsoever. Two neuro-oncologists have told me they have never seen my kind of result, and I hear that so often now from others I just take it for granted. I am so grateful for Protocel, but I am really excited about it being used in conjunction with Graviola. I have heard of 2-3 cases already in which the two were used in conjunction and there was tumor disappearance in literally days -- serious tumors.

It would be good to hear from you, but I wanted you to know that I admire your tenacity and love of people to go to the effort to do what you are doing. God bless, Steve Finney,"

Steve has said you can contact him if you have questions. His e-mail address is: sfinney@cisco.com
Another Protocol Recovery

Here’s another letter I received in July 2003 from a reader in Brazil:

“Dear Bill,

Thank you for answering me so fast despite that you are on the road somewhere.

To sum up what you are saying: You are saying that only about 3% of cancer patients that receive debulking therapy will be alive after 5 to 10 years?

These are horrible odds! How can a sane doctor continue this type of treatment fully knowing this?

Today I had another meeting with the ‘cancer specialist’ in Sao Paolo. He said he wants to cut away my lymph nodes on the left side of my neck and then apply radio therapy to burn the tumor.

My reply was: No Way!!

I’ve been on PROTOCEL since June 4 (2003), and the tumor is definitely getting smaller and all my pain that I had for a while is gone.

Can you imagine that? In twelve days!

Tomorrow I will be checking in to a natural clinic here where someone will supervise my progress more closely.

I will keep you posted on my progress. Thanks again, Bill! You are a real blessing!

Ove”

At last report, Ove is cancer-free and doing fine.

Graviola

My good friend George Freaner, another 83 year old and 20+ year cancer survivor, was kind enough to send me an article on Graviola. You may have heard of this substance before, but I would like to remind you of it, because it is readily available without a prescription and it is quite inexpensive (cheap!).

Here’s the article. It's from "The Doctor's Complete Guide to Conquering Cancer," published by Agora Health Books of Baltimore, MD:
"Natural Cancer Fighter From the Amazon May be 10,000 Times Stronger Than Chemotherapy

Native medicine men in the Amazon have known about the Graviola tree for centuries. But cancer patients are just starting to learn about the benefits of the natural medicine it provides us with, which some say is more powerful than chemotherapy.

In as many as 20 laboratory studies over the last 30 years, Graviola has been found to selectively kill malignant cancer cells--cells from breast, colon, prostate, pancreatic and lung cancers specifically. In a 2000 study at the Catholic University in South Korea, two chemicals extracted from Graviola seeds showed cytotoxic results comparable to those of Adriamycin, a common chemotherapy drug. Another study, published in the Journal of Natural Products in 1996, found that Graviola killed colon cancer cells at ‘10,000 times the potency of Adriamycin.’ Research at Purdue University found that leaves from the Graviola tree killed six different kinds of cancer cells, showing particular effectiveness against prostate cancer, pancreatic cancer, and lung cancer cells.

Proponents of Graviola report that it is able to selectively kill cancer cells without damaging healthy cells--and without serious side effects. Some users have reported gastrointestinal upset at high doses; this may be avoided, however, by taking Graviola with food. As a nutritional supplement, it is not subject to FDA approval and is available by mail order from Raintree Nutrition; tel. (800) 780-5902. Raintree supplies Graviola leaves, which can be made into a tea, as well as Graviola capsules. The recommended dosage varies from 1 gram to 5 grams of Graviola per day, or six to eight capsules daily. The cost for Graviola is about 20 cents per capsule."

Original Research

I usually don't quote from original research papers. Here's a sample from one on Graviola which will show you why:

"They are potent inhibitors of NADH: ubiquinone oxidoreductase, which is in an essential enzyme in complex I leading to oxidative phosphorylation in mitochondria. A recent report showed that they act directly at the ubiquinone-catalytic site(s) within complex I and in microbial glucose dehydrogenase. They also inhibit the ubiquinone-linked NADH oxidase that is peculiar to the plasma membranes of cancerous cells."

And Now – In English
However, here is a quote from that same report on Purdue University's research on Graviola, which is a little more decipherable to us normal humans, and which is quite significant.

"In 1997, Purdue University published information with promising news that several of the Annonaceous acetogenins 'not only are effective in killing tumors that have proven resistant to anti-cancer agents, but also seem to have a special affinity for such resistant cells.' In several interviews after this information was publicized, Purdue pharmacologist Dr. Jerry McLaughlin, the lead researcher in most of Purdue’s studies on the Annona chemicals [Graviola], says cancer cells that survive chemotherapy may develop resistance to the agent originally used against them as well as to other, even unrelated, drugs. 'The term multi-drug resistance (MDR) has been applied to this phenomenon,' McLaughlin says. He explains that such resistance develops in a small percentage of cancer cells when they develop a ‘P-glycoprotein mediated pump’ capable of pushing anti-cancer agents out of the cell before they can kill it. 'Normal cells seldom develop such a pump.

'If having this pump was such a good deal, all cells would have it. But all cells don't,' McLaughlin says in a statement from Purdue. 'In a given population of cancer cells in a person, maybe only 2% of the cancer cells possess this pump. But it's those 2% of cancer cells that eventually grow and expand to create drug-resistant tumors.' McLaughlin and his colleagues say some studies have tried to bypass these pumps by keeping them busy with massive doses of other drugs, like the blood pressure agent verapamil. In this way, it was hoped that some of the anti-cancer drugs would enter the cell and destroy it. But this only caused potentially fatal side effects such as loss of blood pressure.

In the June [1997] issue of Cancer Letters, the Purdue researchers reported that the Annonaceous acetogenin, bullatacin, [Graviola] preferentially killed multi-drug resistant cancer cells because it blocked production of adenosine triphosphate, ATP -- the chief energy-carrying compound in the body. 'A multi-drug resistant cell requires a tremendous amount of energy to run the pump and extrude things out of the cell,' McLaughlin says. 'By inhibiting ATP production, we're essentially pulling the plug on its energy source.' But what about the effect on ATP in normal cells? 'Normal cells and standard cancer cells may be able to minimize the effect of this compound because they don't require vast amounts of energy needed by the pump-running cells,' the Purdue researcher says.

'The resistant cell is using its extra energy for this pump as well as to grow, so it is really taxed for energy. When we mess with the energy supply, it kills the cell.'"

A good web site for more info on Graviola is:

http://www.graviola.org
Check it out!!

Paw Paw

In the Summer of 2003, shortly after my last book was published, I had a conversation with Dr. Jerry McLaughlin. He is the same person I quoted above about Graviola. Dr. McLaughlin had left his research post at Purdue University to join a company called Nature’s Sunshine. He explained to me why he did that.

At Purdue, Dr. McLaughlin had worked for 20 years studying the effect of extracts like graviola, guanabana, soursop and thousands of others on cancer cells. He said he had studied 3,500 substances. His research was funded with a $5 million grant from the National Cancer Institute. Despite this funding, the NCI has never published the results of Dr. McLaughlin’s successful study that you will read below. Are you surprised?

The Paw Paw tree is common in the Midwest U.S. In fact, there is a town in Michigan called Paw Paw. Dr. McLaughlin had spent years studying the various parts of this tree and had found that the twigs, not the fruit, produced the most powerful acetogenins. These are compounds that regulate the production of ATP, the energy source in every cell in the human body. For years, Dr. McLaughlin had been searching for one of these acetogenins that would also inhibit the growth of “multiple drug resistant” (MDR) cancer cells.

Most tumors contain a small percentage, approximately 2%, of MDR cells. Chemo is not effective against these cells. After the first round of chemo, if the chemo is effective, all of the cells that are not MDR are destroyed. Since this accounts for the vast majority of the tumor mass, the tumor will appear to be effectively destroyed. However, the MDR cells remain and start to multiply. Eventually, a new tumor is formed that is entirely MDR. The next time chemo is used, none of the cells will be destroyed because they are all MDR. Paw Paw is the only cancer treatment that has shown effectiveness against MDR cells.

By reducing the ATP, Paw Paw was also able to reduce the growth of blood vessels that nourish the cancer cells, a process called “anti-angiogenesis.” It also, like Protocol, reduced the side effects of chemo. In short, after his many years of searching, Dr. McLaughlin was convinced he had discovered what he was looking for.

To ensure that the manufacture was correct, Dr. McLaughlin went to work for Nature’s Sunshine, the company that makes the Paw Paw twigs into a tablet. Even though it is sold by multi-level marketing, Paw Paw is surprisingly inexpensive. If fact, of the 12 cancer-fighting products listed at Paul Winter’s...
site above, **Paw Paw is, by far, the cheapest.** The price is approximately $30 per month.

**Dosage**

Take 1 capsule with food four times a day at even intervals. Do not take any of the following while taking Paw Paw:

- Co-Q10
- Thyroid Support products
- SOD
- 7-Keto™
- Antioxidant products such as vitamin A, vitamin C, vitamin E* or Alpha Lipoic Acid

* The amount of these vitamins found in fruits and vegetables will not have a serious effect on the performance of Paw Paw.

This product is not a preventative. While it is effective against viral diseases such as shingles and cold sores, it should not be taken unless there is a specific cellular problem, including, of course, cancer.

**Effectiveness**

Paul Winter’s “Comparison Chart” includes 714X, Essiac Tea, Beta Glucan, Cesium Chloride, Hydrazine Sulfate, Laetrile, MGN-3, Ellagic Acid and Protocol. Paw Paw **receives the highest grades** in virtually all of the “criteria” which Paul uses (Effectiveness; Studies; Quality of Papers; Conclusiveness of Papers; Standalone Ability; Ease of Use; Side Effects; Compatibility; and Monthly Cost). Paw Paw, uniquely, receives a 10 from Paul (the highest grade) in the Effectiveness column. None of the other products get a “10” (admittedly subjective) from him. Nevertheless, Dr. McLaughlin’s studies and others show Paw Paw is effective **only 50% of the time.** Protocol studies show virtually the same 50% effectiveness.

Once again, I need to emphasize that **no one product is a “magic bullet”** that everyone can take and be sure his or her cancer will go away and stay away.

I give you lots of options in this book. Is Paw Paw a good option? I feel it is.

At the end of this chapter I will give you a recap of what I think is a regimen which will offer a very high probability of recovery, whether you use it with conventional treatment or instead of that treatment. But, there are no
guarantees. You must be determined to find the combination that works for you. Believe me, there is one.

Source

I feel comfortable recommending Franscisco Esteras in Puerto Rico as a source for both Paw Paw and Onconat I (see below). Francisco calls himself a “Natural Medicine Consultant” and he’s a good one. He has worked with several of my readers and helped them become cancer-free. I have had nothing but good reports on his willingness to help cancer patients. He does not charge for his consultations. You can reach Francisco at (787) 306-3620 or by e-mail at: aquila07@prtc.net.

Onconat I

Rarely do I hear of a new cancer treatment complete with case studies of patients healed while taking only this new substance. That’s why I became quite excited when I looked at a “monograph” sent me by Francisco Esteras (see above).

The “monograph” was in the form of a CD. On the CD were case studies of cancer patients complete with their medical records, including sonogram pictures and CT scan pictures “before and after.” They were accompanied by a narrative account by the doctor who treated them.

That doctor is Bernardo Udaquiola, M.D., an oncologist in Uruguay. The patients on the CD were mostly from Uruguay or Argentina, but one was from Sweden. Their cancers covered the waterfront – prostate, kidney, brain (glioblastoma), colon/rectal, lung, pancreatic, thyroid, vaginal and skin neoplasms. Dr. Udaquiola also had opinions from five other oncologists who had used this substance on their patients (peer review, yet!). There were even diet recommendations at the end of the CD.

The product? Well, in the U.S. it’s called Onconat I Immune Support just to get around the FDA prohibition on labeling (see MGN-3). In countries where Big Pharma is not as much in control as it is here, it is sold as a cancer treatment product. It contains about 25 different ingredients, mostly herbal and completely compatible with any other treatment.

Francisco will be happy to send you a copy of the CD he sent me. He may even have one of a later study. Unless you live in Uruguay, just “asking your doctor” about this is likely to get you only a blank stare, at best. I recommend Francisco as a source. See the contact information under Paw Paw above.
Four More Easy Self-Treatments

I will close this chapter with four more inexpensive and readily available cancer treatments. In the next chapter, I'll cover those that I DON'T recommend you try, at least not on your own (without a medical professional's supervision).

**Red Raspberry Capsules**

Why? What are the benefits? Raspberries, like many other fruits, contain ellagitannins, compounds that have been shown to have many health benefits, but **raspberries have the most.** These benefits include:

- Prevention of certain types of cell damage by carcinogens that result in cancer.
- Slowing of tumor growth.
- Inducement of natural cell death for cancer cells.

Would you believe that the American Cancer Society has even published information on red raspberries? Knowing what I do about their propaganda, that doesn't give me the greatest feeling of confidence.

However, if you would like to read a true testimonial from one of my readers, just go to:

Call or e-mail Bob & Jackie Hall for more information on how and where to buy the red raspberry capsules. You can reach them at:

Phone: (707) 435-8434; Fax: (707) 371-4946; Email: ventures@jccomp.com

Approximate cost: $21.95 per month. They have a special of 6 bottles of 120 tablets of 1,000 mgs each for $17.95 per bottle.

**Artemesinin**

In late 2001, two bioengineering researchers at the University of Washington published their discovery of a **promising potential treatment** for cancer. Originating in the ancient arts of Chinese folk medicine, the **wormwood** herb derivative has been used for 30 years to treat malaria.

In the journal Life Sciences, Professor Harry Lai and his assistant Narendra Singh described how they targeted breast cancer cells with artemesinin. The
results were indeed surprising. While only 25% of the cells were killed in the first eight hours, virtually all of them were killed in 16 hours.

"Not only does it appear to be effective, but it’s very selective," Lai said. "It’s highly toxic to the cancer cells, but has a marginal impact on normal breast cells."

Artemisinin works against malaria by reacting with the high concentrations of iron found in the malaria parasite. When artemisinin comes in contact with iron, a chemical reaction ensues, spawning charged atoms that chemists call "free radicals." The free radicals attack the cell membranes, breaking them apart and killing the single-cell malaria parasite.

About seven years ago, Lai began to hypothesize that the process might work with cancer, too.

"Cancer cells need a lot of iron to replicate DNA when they divide," Lai explained. "As a result, cancer cells have much higher iron concentrations than normal cells. When we began to understand how artemisinin worked, I started wondering if we could use that knowledge to target cancer cells."

Lai’s work has been funded by a grant from the Breast Cancer Fund of San Francisco. However, artemisinin’s value is hardly limited to breast cancer. In fact, an earlier study involving leukemia cells yielded even more impressive results. Those cells were eliminated within eight hours. A possible explanation might be the level of iron in the leukemia cells.

"They have one of the highest iron concentrations among cancer cells," Lai explained. "Leukemia cells can have more than 1,000 times the concentration of iron that normal cells have."

Here are web sites with articles that will get you completely up to speed on this interesting substance:

http://news.bbc.co.uk/1/hi/health/1678469.stm

http://www.annieappleseedproject.org/artemisinin.html

http://members.tripod.com/~altmedangel/cancherb.htm

Unlike some Chinese herbs, this one has 30 years of Western scientific studies behind it and is used widely to treat malaria and hemorrhoids (it is anti-inflammatory) and is certainly non-toxic.
Fortunately for you, the University of Washington has patented Dr. Lai's idea. This just means that a pharmaceutical company probably can't pick it up, develop a synthetic form and sell it for twenty times as much.

Personal recommendation from the author: I've tried this product for about six weeks. I happened to start it two weeks after a blood test where my PSA (Prostate Specific Antigen) came back as **12.6** (it had been between 9.5 and 12.9 for about 15 years. After 15 days on the artemisinin, I happened to have another blood test. The PSA was **6.9**, the lowest it had been in 15 years.

Interestingly, when I told my urologist of this sequence of events, he was not happy. He knew nothing about artemisinin and felt that by varying what I was taking, I made it difficult for him to determine when to suspect prostate cancer. He alleged that "shrinking the prostate and/or reducing the PSA does not mean you won't get prostate cancer."

Since that exchange, which I found rather obtuse, I have fired that urologist.

OK, so you're convinced that this substance is an interesting development in cancer treatment. Next question. How do you get it? Good question. I've looked at several sources, including Dr. Donsbach's "Canburst" and Hepalin 25. I have actually ordered one bottle of the **Hepalin 25** (at $56 a bottle for 30 100mg capsules -- a one-month supply) and finished taking it.

Thanks to Dr. Russell K. Griffith, one of my alert readers, here's a very inexpensive source for artemisinin.

Artemesinin (100mg, 90 pills) can be obtained from Vitanet (Item no. 72160) for $16.80. That's where I'd get mine now. This is an Allergy Research Group product. Order at:

Instead of almost **$2 a day** from the Hepalin 25 source, it works out to **nineteen cents a day** at the recommended dosage of 1 pill per day.

Thank you, Dr. Griffith!

With a little luck, we may be able to get OurHealthCoop (see above) to stock artemisinin sometime soon. Their superior quality control procedures would certainly give me more security about the quality of the product.

**Calcium**
Calcium is an essential part of life. Bob Barefoot, in his book “The Calcium Factor: The Scientific Secret of Health and Youth” describes it as “the silver bullet” that conquers all degenerative disease.

I have “slogged through” both of Bob Barefoot’s books on this subject. The other is called “Death By Diet.” I find them both pedantic and very difficult for anyone to read and follow. I think this amount of detail on a relatively simple subject is counter-productive. In particular, his protocol on page 107 of “Death By Diet” is way too complicated and inferior to several simpler treatments mentioned above. I’m not a fan of Bob Barefoot, his “Coral Calcium” or the other supplements he sells in his books and on TV “infomercials.”

However, the concept he champions that calcium supplements promote the healthy alkaline state in our bodies is a good one.

A better and simpler view is one I heard recently from Art Brown (remember him? – a charter member of my “vibrant network” club). Here’s what Art has to say:

“For those calcium freaks (like myself) ever on the lookout for a good, high quality, absorbable form of this absolutely essential mineral, I recently stumbled across Crystal Calcium from the KAL Company. (KAL was founded in 1932.)

Hard to contain my enthusiasm here! The importance of calcium’s ability to alkalize in cancer care is established. Not to mention the hundreds of other roles it has in the body.

Crystal Calcium is a ready-to-go pre-ionized form of calcium. So, the body doesn't need to work at breaking down supplements like calcium carbonate in the stomach trying to pry out the calcium ion. I know this is a significant problem with many people - especially me. A loose white powder, it disappears in a glass of water. Talk about bang for the buck! Would you believe just $12 for 2/3 of a pound?!

Personal experience alone, but results were noticed immediately. Best stuff I've found in 20 years.”

Want to try some? Just go to:

http://www.myvitanet.com

…and enter a search for “Crystal Calcium.” It sells at that site for $9.10 for a 300 gram bottle. A real deal!
[Again, neither Art Brown nor I have any financial interest in any of the products we recommend.]

**Beta Sitosterol**

If you are a human bean of the male persuasion, I have a suggestion for you. Pay attention to your prostate! Next to heart problems and lung cancer, prostate cancer is the leading cause of death among men. Most of us my age (73) are coping with an enlarged prostate, formally known as Benign Prostate Hyperplasia (BPH).

Thanks to my friend Cy Bursuk, a nutritional consultant in Tucson, I have discovered Roger Mason and his book "The Natural Prostate Cure." Every man should read this book. It is the most complete explanation of the effect of hormones and supplements on male health in general and prostate health in particular I have ever read. In just 72 pages, he explains why your prostate grows larger as you age. He also destroys many of the myths about hormone therapy (for both men and women) and the effects of various substances (including hormones) on your prostate.

What is most interesting about this book is that the author, uniquely among living or dead "experts," has read EVERY study on the subject ever published, regardless of language. He did this by reviewing every entry in Chemical Abstracts (known as the "chemist's bible"). This tome contains every published medical article of importance from every scientific journal in the world. In a year of tough, grinding research, mostly at the National Institutes of Health Medical Library (the largest such library in the world) in Bethesda, Maryland, he read every one, even getting those translated from a foreign language, where necessary. Well-documented conclusions? You bet!

How much does this book cost? $6.95 from amazon.com. Or, nothing, if you order, as I did, a couple of bottles of Beta Prostate. This product, recommended by Cy, is apparently unique in its content of the key ingredient "Beta-sitosterol" needed for prostate health, whether or not you have detectable cancer. The product is not expensive ($22 for a 60-capsule bottle). Each capsule contains 300 mg of beta-sitosterol, 100 mg of selenium and 15mg of zinc. To learn more about it and order some, you can go to:

[http://www.wellnesspartners.com](http://www.wellnesspartners.com)

or call 1-888-779-7177.

A cheaper source for the Beta sitosterol (150mg, 40% potency), is Our Health Coop. It comes in a bottle of 60 for $9.46 (normal retail: $29.95). Just go to:
The Final Answer For Me

I took the Beta Sitosterol for about three months. I then tried artemisinin for a couple of months. Finally, in January, 2003, my new doctor (see Chapter 1 above) recommended I try PC Essentials from

http://www.swansonvitamins.com

As you know if you’ve read this far, I trust Swanson Vitamins as a source. I tried the PC Essentials and have been on it ever since (21 months at this writing). Within two weeks, all my prostate (BPH) symptoms went away – and stayed away. No more getting up several times a night. Once, most nights – occasionally none. No more aching in my lower back. No more urgency or incontinence with my bladder. Nada.

In addition (as if that were not enough), the one time I had an attack of prostatitis (after a very stressful trip back from Europe), I just tripled the dose for two days and the prostatitis went away. A 30-day supply (90 capsules) costs $15.99 from Swanson Vitamins.

A Word About PSA Tests

The doctor who first discovered the Prostate Specific Antigen (PSA) test has now discredited it as a test for prostate cancer. He says it has no real value except as an indication of the size of the prostate. If you’re still taking one of these PSA tests every 6 months or a year, you might want to consider stopping that. I have. My doctor and I agree that we will run cancer tests (AMAS test, for example) when I have some symptoms. In the meantime, he (the doctor) does a digital rectal exam (DRE) every six months or so. That’s all.

Feel Better Fast!

Let me close out this section on self-treatment with a treatment I have tried myself. It works to make you feel better, no matter what your reason for feeling bad.

I received this from Phil Dyer, a friend who publishes a newsletter. Phil says it came from the "Doctor Yourself Newsletter" by Andrew Saul, PhD. He modeled it from Abram Hoffer, M.D., "The King of Niacin."

"If you do not feel well, and I would go so far to say for almost any reason, try this deceptively simple game plan. Go out of your way to promptly get to

Cancer-Free – Your Guide to Gentle, Non-toxic Healing 120
saturation of the following four key nutrients: niacin, vitamin C, water, and carotene. It is uncomplicated, fast-acting, and very effective on a wide variety of illnesses."

Certainly, cancer is one of those illnesses. Here's the info Phil is referring to from Dr. Hoffer by way of Dr. Saul:

"1) GET TO NIACIN SATURATION, which is indicated by a mild, warm, pink-eared vasodilation known as a 'flush.' If you are feeling stressed, anxious, depressed, worried or just plain ticked off, try this:

Immediately take 100 to 200 milligrams of niacin (not niacinamide) every ten minutes until you feel warm and happy. If you think this will not work, it's because you have not tried it. While we're at it, Some FEARLESS FLUSH FACTS:

If I had a dime for every person worried about the 'flushing' they experienced when taking large doses of niacin, I'd be a rich man. Niacin flushes are harmless. Some people (including me) enjoy them, especially this time of year, as they are accompanied with some welcome warmth. Dr. Hoffer says that the more niacin you take now, the less you will flush later.

Time needed to see improvement: less than an hour.

2) GET TO VITAMIN C SATURATION, which is indicated by bowel tolerance. That means, take a few thousand milligrams of vitamin C every ten minutes until you get, or feel like you are about to get, diarrhea. This will both clean you out and jump-start your immune system. Vitamin C in quantity is the best broad spectrum antitoxin, antibiotic and antiviral there is.

Time needed to see improvement: less than a day.

3) GET TO WATER AND CAROTENE SATURATION. This can be simultaneously achieved by twice daily juicing a big stack of vegetables, such as carrots and any green or orange vegetable. Yes, green as well as orange veggies are absolutely loaded with carotene. Yes, you really do have to drink it. What are you afraid of? When's the last time a person died of vegetable overdose? Saturation of carotene is reached when your skin turns a partial-pumpkin, lovely orange-tan color. Called 'hypercarotenosis,' it is harmless. Looks cool, too, much like a suntan. Abundant water intake is guaranteed by abundant juicing. When your tummy is full of juice and you have to urinate a lot, you are at water saturation.

Inside your skin, you are an aquatic animal. Water is good. Veggie juice is better. If you are worried about getting enough trace minerals, relax. Most are amply
found in the vegetables.

Time needed to see improvement: less than a week.

If you think I have lost what’s left of my marbles, think again. I have never been more serious. When I work with very sick people, the first ‘homework’ I give is to go flush, reach bowel tolerance, hydrate, and turn orange. Sounds preposterous, doesn’t it. But people who do so feel better immediately. Their tests improve immediately. And they learn something of lasting practical value."

Go thou and turn orange!

Whew!

OK, that’s a lot of information. Let me give you a one-page summary of what I would do if I were diagnosed today with cancer – any type, any stage. Hopefully, this will go on your refrigerator for easy reference.
Summary Of The Self-Treatments

- Immune System Boosting – RM-10, Msr-3, Oncolyn, Beta Max
- Cottage Cheese/Flaxseed Oil – 1½ cups per day
- Heart Plus – from Our Health Coop
- Barley Power from Green Supreme, Inc. – 20 tablets per day
- Cancer-fighting Diet – Patrick Quillin, Diana Dyer, Dr. Flavin-Koenig
- Vitamin, Mineral, Amino Acid, etc. compound – Daily Advantage or ??
- One or more of the following:
  - Protocel – No Heart Plus*
  - Paw Paw – No Heart Plus*
  - Onconat I
  - Artemesinin – No Heart Plus*
  - Crystal Calcium
  - Exercise With Oxygen Therapy (EWOT)
  - PC Essentials (for men)
  - Red Raspberry Tablets
  - The “Feel Better Fast!” combo – Not with Protocel, Paw Paw or Artemesinin*

Your combination of these will give you a 90% plus chance of becoming cancer-free. Your job….find the combination that works for you.

*There is nothing toxic about taking antioxidants with Paw Paw, Artemisinin or Onconat I….they simply make the treatment less effective.
Virtually everything we have discussed in this chapter – supplements, most of the tests, IPT clinical treatment, etc. – is not reimbursed by insurance. Here's some information that may help.

Have you heard of something called "viatical settlements?" Neither had I. A viatical settlement is the sale of a life insurance policy issued on the life of a person who, in this context, is called a "viator." It is based on a law passed by Congress that went into effect on January 1st, 1997. It is called "The Health Insurance Portability and Accountability Act of 1996.

The person on whose life the policy is written does not have to be the "owner" of the policy. For example, a spouse may be the "owner" of the policy and/or the beneficiary.

What is important is that there are options available to get money NOW out of a life insurance policy. That money may be more useful now than after the death of the person on whom the policy is written. What is really ironic is that the money obtained in this manner may actually extend the life of the "viator" for many years. [Hint: Don't let the people buying your policy know how effective the "alternative" treatments are that you will be taking!]

The procedure, which amounts to selling the policy to a third party, covers all types of life insurance policies -- term, whole life, "key-man" policies, buy/sell agreement policies and so on. Basically, someone is buying the life insurance benefit at something less than the full amount payable on the covered person's death (50-85%, depending on life expectancy).

For "seniors" 70 or older, the policy can be sold regardless of the insured's health. Generally, the proceeds of the sale are tax-free. Obviously, some paper work and time is involved, so don't delay. If you are interested in further information, here's a toll-free number to call to get a brochure from one company that specializes in this (it's not the only one). The number to call is (888) 321-9057. It's a company called Viatical Settlement Professionals, Inc. in Richmond, Virginia. They also have a web site (who doesn't?). It's at:

[http://www.vspi.com](http://www.vspi.com)

Free Medicine

Can't afford the expensive medication your doctor prescribes for you? Here's a solution from a new reader named Bill McLaughlin. Bill brought to my attention a web site called:
http://www.themedicineprogram.com

These wonderful volunteers are dedicated to helping you wade through the paperwork to get your prescription medication (not alternative stuff) free. The criteria:

- That you do not have insurance coverage for outpatient prescription drugs.

- That you do not qualify for a government program which provides prescription medication, e.g. Medicaid.

- That your income is at a level which causes a hardship when you are required to purchase the medication at retail.

That last can vary widely, depending on the drug company. Some cancer patients, for example, have incomes as high as $60,000 per year and still get free prescription medication from this program.

Yes, this is drug company largesse. And you can bet it is done for a purpose. The primary purpose is to convince lawmakers of their "sincerity" in looking out for your interests. Hmmm. Their view of the naivete of our lawmakers is not encouraging, but, unfortunately, probably true.

Here's a quote from an article about this program in the July 28, 2000 Wall Street Journal:

"'In my opinion, they want to keep it a secret,' says Cindy Hogg, administrator for The Medicine Program, a private advocacy group in Doniphan, Mo., which helps patients navigate the free drug application process. ‘They do it so they can tell Congress, ‘We give away medicine for free,’ but then they don't tell anybody about it and make it hard for people to apply.’

Well, Cindy Hogg and the other Medicine Program volunteers are dedicated to helping you navigate through this application process. Again, contact them at this web site:

http://www.themedicineprogram.com
CHAPTER 6

CLINICS

In this chapter, I will give you some information on clinics in the U.S., Mexico and Europe which I’ve become familiar with. Generally, if you can afford it, I recommend you seek out one of these clinics. The concentrated attention they give you during your stay at the clinic can be life saving. The comprehensive “take-home” advice you leave with is also priceless. The best, including those I mention here, dedicate themselves to follow-up with you until you are cancer-free, and even after that.

MSB Holistics

I have gotten to know the operators of this clinic in Buffalo, New York quite well since we first corresponded in 2003. Dr. Randy McCreary, the principal in charge of treatment, joined me to conduct a workshop in Augusta, Georgia in July 2004. Several of my readers have visited the clinic, used their services and given me very positive feedback.

Those of you familiar with Dr. Royal Rife’s work using magnification and resonant frequencies to heal cancer in the 1930’s know the origin of one of the techniques used by this clinic. The scientific evolution of this concept since then is amazing. If it is new to you, you should read one of Barry Lynes’ books like “The Cancer Cure That Worked: The Rife Report” or “The Cancer Conspiracy: Betrayal, Collusion and the Suppression of Alternative Cancer Treatments.”

MSB Holistics (the “MSB” stands for “Mind, Spirit and Body”) uses a “low frequency magnetic therapy” which is a direct descendent of Royal Rife’s technology. This modern version is computerized. The computer stores the patient’s unique DNA, obtained from a small blood sample. The low frequency magnetic waves then locate the patient (yes, anywhere in the world) and allow the computer to analyze the electrical energy of the patient’s cells. The energy for certain conditions (including cancer) is unique. The important “bottom line,” however, is that it can be changed to a healthy energy pattern by the computer program – projected by the magnetic waves (remember “short wave” radio? – similar concept). The result: the cancer disappears, the organs heal and the patient regains his or her health.

Sound impossible? Buck Rogers? Way too weird? All I can tell you is that the people performing this function are dedicated, caring people. They have healed thousands of cancer patients all over the world. I know dozens of them,
including several in foreign countries (Australia, South Africa, Italy, etc.). The clinic’s operators claim an 80-90% healing rate. As always with this type of “alternative” clinic, these healing rates are astounding considering they get mostly patients who are seeking them out as a “last resort.”

Here’s an account from a Canadian reader, which may help you grasp this concept. Jerry Daniel has been quite helpful to several of my readers who have sought information on this treatment from him:

“Hi Bill. I listened with great interest on Saturday night when you were interviewed on the Bill Boshears show on WLW. I have ordered your book and look forward to reading it.

I was diagnosed with prostate and bone cancer in January of this year (2003) but refused to take the traditional treatment recommended by my doctor and cancer professionals in London Ontario Canada. The reason I declined was very simple…an alternative health clinic in Buffalo, New York had successfully cured my wife and daughter in the previous two years.

M.S.B. Holistics has a great professional staff headed by Dr. Randy McCreary and they use low frequency energy delivered via the Shuman magnetic field to effectively kill the various forms of cancer cells…so the beauty of what M.S.B. offers is no matter where you live in the world…the staff can treat you.

If you need more information, I would strongly recommend you call Dr. Randy or the owner of the clinic Mr. Ron Charlton at (716) 887-9240. They have experienced a tremendous record of success for cancer patients in recent years.

Keep up the good work, in informing people about the great alternatives to surgery, chemo and radiation to defeat the scourge of cancer.

God Bless,

Jerry Daniel
89 Charles Street West
Ingersoll, Ontario Canada N5C 2L7
E-mail: jerry.Daniel@sympatico.ca”

Dr. McCreary sent me a copy of Jerry’s bone scan (with Jerry’s permission) in January 2004. It was taken a year earlier (January 2003) and showed many silver dollar size holes in Jerry’s bones from his shoulders to his pelvis, up and down his spine. There were numerous other black spots indicating cancer sites all over his body. When it was taken, the conventional doctors did not think he would survive past February or March 2003. In February 2004, Jerry returned to work, cancer-free as a result of Dr. McCreary’s treatment.
For those of you who are “picky” about the letters after your healer’s name, be advised that Dr. Randy McCreary is a Ph.D., not an M.D. or D.O. or whatever. In my book, he is a healer -- a dedicated, caring man who is serving as many as possible of his fellow men and women with his knowledge.

The cost of this clinic’s treatment is reasonable, compared to others. They do not want me to be too specific about the fees, because the fees vary with the treatment required and the patient’s ability to pay.

In addition to the energy treatment, they prescribe a regimen of supplements and dietary guidelines for their patients. I suggest you check them out. In case you are not in a country where calling them on the phone is convenient, you can reach Dr. Randy by e-mail at webmaster@msbholistics.com

If I were diagnosed with cancer today and felt I needed the support of a clinic, this is where I’d turn for that support. Again, I have no financial ties to them or any other provider.

Immune Recovery Clinic

In late March 2004, my wife and I visited the Immune Recovery Clinic in Atlanta, Georgia. My portion of this trip was paid for by one of my readers in Venezuela, Andres Kese. Andres was very impressed with the healing treatment for his advanced prostate cancer he received from this clinic. He was so impressed that he offered to pay my way for a visit there so I could help publicize them.

We were impressed. The staff is enormously well qualified and their work with cancer patients is quite successful. While we were there, we met one of my readers, who had responded to an earlier article on this clinic I had written and gone there for treatment. She had arrived with Stage IV breast cancer and was making great progress. She had been there 10 days and was ecstatic with the quality of the treatment and the attitude of the staff. She is now cancer-free.

Dr. Richard Kinsolving (another Ph.D.) has a world-wide reputation as an expert on the immune system. He meets with the patients daily during their 3-week stay to educate them about healing and staying healed. Dr. Ben Johnson, M.D. is the other medical professional on the staff. Ed Bradford is the CEO and Clinic Director. They have various other experts on the staff, including one in Chinese Medicine.

Their motto, which I completely believe, is “Cancer and chronic disease cannot exist in the presence of an intact immune system.”
The treatment here usually consists of a three-week stay. Patients sleep at a very comfortable (and reasonable) motel three blocks away. Follow-up varies, but usually involves a visit or two several months apart after the initial treatment.

The cost? $4,500 flat fee per week, payable at the beginning of each week at the clinic. They price it this way for two reasons. First, they don’t want their choice of treatment for each patient (which is unique) to be influenced by cost; and second, if they find that they cannot treat you, the expense can be limited. The good news is that they work very hard with your insurance company to get you reimbursed for most of this cost. Ed Bradford, who does most of this work for the patients, says he recovers 60% of the cost, on the average.

To explore this clinic further, I suggest you either call Ed Bradford at (800) 336-3533 or (770) 455-6100 or visit their web site at:

http://www.ImmuneRecovery.net

New Hope Medical Center

One of my readers, Ethan Bauch, was treated for a lymphoma in his neck at New Hope Medical Center in Scottsdale, Arizona in late 2003. He had become disgusted with the ham-handed nature of the treatment he was getting from his conventional doctors.

Ethan was delighted with the treatment at New Hope. He spent three weeks there, which is typical. He is cancer-free now.

New Hope uses a variety of regimens for their patients. Ethan says they limit the patients to 6 at any one time. This insures that each one gets very individualized attention. The charge is $3,500 per week. Some insurance companies will reimburse part of this, but most will not.

Contact Larry O’Toole. They moved in early 2004, but their new contact address and phone number is:

New Hope Medical Center
8945 E. Calle Buena Vista
Scottsdale, AZ 85255
(888) 524-4673 (toll-free)
or
(480) 556-0182

Mexican Cancer Clinics
Several years ago, when I first began researching cancer causes and cures, I heard about all the clinics in Mexico. Frankly, I felt less than enthused about them. Probably quacks and charlatans preying on cancer victims, I thought.

Wrong!!

After reading dozens of testimonials written by ecstatically grateful cancer patients cured in Mexican clinics, I have become a believer. Read some of the stories of dedicated physicians like Drs. Clark and Gerson, who have been hounded out of this country by our FDA/AMA "gestapo," and opened clinics in Mexico. You will become a believer, too.

Here is some information from an article by Art Brown titled "Mexican Hospitals - Some of the World's Best for Alternative Cancer Care." It was written in January, 2001. The entire article can be found at The Cancer Cure Foundation's web site: http://www.cancure.org

"Most people do not tend to think of Mexico as a haven for cancer treatment, but there are approximately 40 clinics and hospitals there offering some of the finest alternative medical treatments for cancer today. They vary in size from one-doctor operations to modern, multi-story, full-service hospitals with an extensive range of doctors on staff. Most are located close to the Mexican/American border across from San Diego, California. Some are even within walking distance of the border that avoids the need to wait in line in your car for half an hour at the border to clear customs. Although a passport or visa is not necessary, valid identification identifying your country of birth, such as driver's license, is required.

Why do patients go to these clinics and hospitals?

In Mexico, the political system is such that the government credits and inspects clinics and hospitals, but does not attempt to get in between the doctor and patient. In short, it leaves doctoring to doctors. This means they are free to use treatments from countries around the world which have proven successful in battling cancer. They can also develop and perfect their own treatments and immediately use therapeutic breakthroughs as soon as they become available.

Not so in the United States where cancer treatments are usually limited to varieties of chemotherapy, radiation and surgery. This is unfortunate as there are about 100 other useful, non-toxic cancer treatments, almost all of which have well-documented scientific evidence to support them.

Having freedom-of-choice regarding treatments, Mexican doctors have been able to develop their skills in using both conventional and alternative therapies, schooling their staffs in them and setting up appropriate patient care facilities. In addition, over the years they've learned which treatments, or combination of
treatments, work best for which conditions.

An unusual 'sub-specialty' in cancer care has arisen in Mexico out of all this. Although hospitals there get patients from around the world, the majority comes from the United States (This is another reason they locate close to the border.) These people typically have received conventional cancer treatments where they live without success. Frequently they are very sick with bodies severely weakened by surgery, radiation or chemotherapy. As a result, Mexican clinics and hospitals have become accustomed to helping patients with extra burdens. Not only must they treat end-stage cancer for people coming to them as a last resort, which is a task far more difficult than in the earlier stages, but they must also undo the damage done by conventional 'therapies.'

Best of the Best

Not all clinics and doctors in Mexico are worthwhile of course. We recommend only the best of the best. That is, those we feel are the most experienced, reputable and reliable - large or small. We have toured many facilities, talked to the staff, are familiar with their operations and talked to patients. Typically, they've been around for many years. One in particular has treated over 100,000 cancer patients with alternative treatments in the last 35 years. A record like that speaks for itself. (Call us to arrange a free consultation with a doctor from that particular hospital.) For more information and recommendations, phone (800) 282-2873, or (805) 498-0185 M-F, 9-5, Pacific time.'

You may want to look into tours of these clinics. There are at least two agencies in California who offer organized tours. Detailed information on each of these is in the book "Third Opinion." Here is some brief contact information:

Las Mariposas Clinic of Spain
The only clinic in Europe on which I have positive first hand information is Las Mariposas Clinic in Spain. It is located in Torremolinos, near Malaga on the Costa del Sol. This clinic is the only one in the world I have heard of which offers you a money-back guarantee if their treatment does not work.

Contact information and a huge amount of information about their treatment is available at their web site in Spanish and English. You will find it at:

http://www.MariposasClinic.com

Here is an e-mail I received from Tom Brubaker, a reader in Palma de Mallorca, Spain:

“Hi Bill,

Thank you very much for your last newsletter, which I have printed out for my neighbor, and which I am going to use for its information and links. I went to see Dr. Raymond Hilu at the Mariposas Clinic in Torremolinos and spent a week there in a very nice four star hotel for 65 Euros a day because it is off season.

Raymond is a dedicated person and I am sure he treated me both generously and carefully, having done two blood tests, before and after treatment. In my case, he used a mechanism that combines the Rife therapy with three other applications, based on laser directed to the acupuncture points. He gave me Cell Food from Nu Science in Lancaster, California and B complex, B12, Linseed oil, ( He had spent some time with Dr. Johanna Budwig ) and other supplements. I have also taken three separate weekly treatments twice a day of Rife and Hulda Clark applied by a friend of mine who is a healing practitioner according to German law and living here.”

At last report – a week or so ago – Tom is cancer-free and doing fine.
OTHER TREATMENTS YOU SHOULD KNOW ABOUT

There are a whole slew of cancer treatments out there touted by credible experts and not-so-credible amateurs. Many of these are quite effective IF a medical professional at a clinic where you are under constant supervision administers them. Others are just not proven to be effective or they are inferior to other readily available treatments or they are too expensive.

You will probably hear about each of these at some time during your journey. It is just as helpful, in my opinion, for you to know about those that are not as effective or which require professional supervision as those above in the self-treatment chapter. The goal is to make you an expert “co-doctor.”

Laetrile/Amygdalin/Vitamin B17

A good example is Laetrile. I believe that Laetrile has helped thousands of cancer patients since it was first discovered in 1953. First, some background.

**World Without Cancer**

The best book I have found on the subject of Laetrile is "World Without Cancer" by G. Edward Griffin, first published in 1974. It has been through many updates including 15 printings since then -- the most recent in March 2000. He has exhaustively researched the history and science of Laetrile (B17). He has personally researched the reason the FDA banned Laetrile. Once you read this book, you will no longer believe in the "protection" being provided you and me by agencies like the FDA, the American Medical Association (AMA), and the American Cancer Society (ACS).

If you would prefer to hear audio excerpts from this book, just go to:

http://www.cancure.org/audios.htm

You will find four 30-minute audio clips (using Real Player software, which you can download free) on the subject by Ed Griffin, the author of "World Without Cancer."
If you go to the cancure home page (above) and type in B17 in the search engine, a number of articles will come up. The first one covers both sources of the B17 capsules and apricot seeds and clinics all over the world that use this as part of their cancer cure protocol, complete with phone numbers.

Edward Griffin documents the suppression of Laetrile and its advocates for what it is -- a conspiracy to prolong the superb profits of the "cancer industry." The book contains very persuasive evidence that Laetrile works. This includes many case studies with the names and hometowns of the individuals. I will quote just one to give you an idea of the power of this book:

"WILLIAM SYKES"

In the fall of 1975, William Sykes of Tampa, Florida, developed lymphocytic leukemia plus cancer of the spleen and liver. After removal of the spleen, his doctors told him that he had, at best, a few more months to live.

Although chemotherapy was recommended -- not as a cure but merely to try to delay death a few more weeks -- Mr. Sykes chose Laetrile instead. In his own words, this is what happened:

'When we saw the doctor a few weeks later, he explained how and why Laetrile was helping many cancer patients, and suggested that I have intravenous shots of 30 cc's of Laetrile daily for the next three weeks. He also gave me enzymes and a diet to follow with food supplements.

In a few days I was feeling better, but on our third visit the doctor said that he could no longer treat me. He had been told that his license would be revoked if he continued to use Laetrile. He showed my wife how to administer the Laetrile, sold us what he had, and gave us an address where more could be obtained.

The next week I continued on the program and was feeling better each day. One afternoon the doctor from Ann Arbor called to ask why I had not returned for the chemotherapy. He said I was playing 'Russian Roulette' with my life. He finally persuaded me to return for chemotherapy, so I went to Ann Arbor and started the treatments. Each day I felt worse. My eyes burned, my stomach felt like it was on fire. In just a few days I was so weak I could hardly get out of bed... The 'cure' was killing me faster than the disease! I couldn't take it any longer, so I stopped the chemotherapy, returned to my supply of Laetrile and food supplements, and quickly started feeling better. It took longer this time as I was fighting the effects of the chemotherapy as well as the cancer...
In a short time I could again do all my push-ups and exercise without tiring. Now, at 75 years of age [20 years after they said I had only a few more months to live], I still play racquet ball twice a week."

In a letter to Edward Griffin, the author of "World Without Cancer," dated June 19, 1996, Mrs. Hazel Sykes provides this additional insight:

“After Bill had conquered cancer, a doctor came to him one day. (This was an M.D. who gave chemotherapy in a well-known hospital.) He wanted to know how Bill had conquered his cancer because his wife was quite ill with cancer. Bill said: ‘Why don’t you give her chemotherapy?’ His answer was: ‘I would never give chemotherapy to any of my friends or family!’ He was not the only doctor who came to Bill with the same question.”

The Doctor is “In”

A large number of M.D.s have weighed in with opinions on the use of Laetrile to control cancer. Here are a few examples:

In 1994, P. E. Binzel, M.D. published his results from treating cancer patients with Laetrile between 1974 and 1991. He used a combination of intravenous and oral Laetrile. Intravenous doses started with 3 grams and worked up to 9 grams. After a period of months, oral Laetrile, 1 gram at bedtime, was begun in place of the injections. Dr. Binzel also used various nutrient supplements and pancreatic enzymes, as well as a low animal protein, no junk food diet as part of his regimen for cancer patients.

Out of a series of 180 patients with primary cancer (non-metastasized or confined to a single organ or tissue), 138 were still alive in 1991 when he compiled his treatment results. At that time, 58 of the patients had been followed for 2 to 4 years, while 80 had a medical follow-up from 5 to 18 years. Of the 42 patients who had died by 1991, 23 died from their cancers, 12 from unrelated causes, and 7 died of “cause unknown.”

Among his metastatic cancer patients, 32 of 108 died from their disease, while 6 died of unrelated causes, and 9 died of “cause unknown.” Of his 61 patients still alive in 1991, 30 had a follow-up between 2 and 4 years, while 31 had been followed for 5 to 18 years.

Binzel’s results are impressive. Some of the individual patients discussed in his book were still alive (and well!) 15-18 years after their initial Laetrile treatment. Binzel also notes that none of the cancer diagnoses were made by him, a small town, “family doctor”. All patients had diagnoses from other physicians. Many had already suffered the ravages of standard “cut-burn-poison”
(surgery/radiation/chemotherapy) medicine before being given up as hopeless
cases by orthodox doctors.

His book is called “Alive and Well,” by P. E. Binzel, M.D. published by American
Media in 1994 at Westlake Village, California.

If you would like to read an extract from this book that includes Dr. Binzel's
detailed instructions on how to administer B17 in both intravenous and capsule
form, just go to this web site:

http://members.lycos.co.uk/g0cge/index.html

Manuel Navarro, M.D., former professor of medicine and surgery at the
University of Santo Tomas in Manila wrote in 1971: “I...have specialized in
oncology for the past eighteen years. For the same number of years I have been
using Laetrile-amygdalin in the treatment of my cancer patients. During this
eighteen year period I have treated a total of over five hundred patients with
Laetrile-amygdalin by various routes of administration, including the oral and the
I.V. The majority of my patients receiving Laetrile-amygdalin have been in a
terminal state when treatment with this material commenced.

It is my carefully considered clinical judgment, as a practicing oncologist and
researcher in this field, that I have obtained most significant and encouraging
results with the use of Laetrile-amygdalin in the treatment of terminal cancer
patients, and that these results are comparable or superior to the results I have
obtained with the use of the more toxic standard cytotoxic agents.”

This quote is from the book “World Without Cancer” by G. Edward Griffin,
mentioned above and in Appendix A to this book.

Dr. Ernesto Contreras of Tijuana, Mexico has used Laetrile as a cornerstone of
his cancer practice since 1963. He remarks that “For the prevention of cancer
and the maintenance of remission, there is nothing as effective as Laetrile…Its
non-toxicity permits its use indefinitely while surgery, radiation and
chemotherapy can only be administered for a limited time…the majority of
cancers that occur more frequently, such as cancers of the lung, breast, colon,
ovaries, stomach, esophagus, prostate, and the lymphomas, are much helped by
Laetrile.”

This quote is from a book called “An Alternative Medicine Definitive Guide to
Cancer,” published in 1997 by Future Medicine, Tiburon, California.

Dr. Hans Nieper is a world famous oncologist in Germany. He is the developer
of the standard anti-cancer cytotoxic drug cyclophosphamide. In 1970, he co-
authored a brief paper on Laetrile with Dean Burk, in which he stated that “…in
the treatment of cancer, the active principle of nitrilosides is to be used mainly in prophylaxis [prevention] and early protective therapy… On the other hand, the complete atoxicity [lack of toxicity] of this method of treatment, which is maybe nothing else but a rediscovered natural principle, permits the unlimited use of this substance.”

This quote is from a paper entitled “Problems of Early Cancer Diagnosis and Therapy,” published in 1970 in the German periodical Aggressologie, Volume 11, page 1-7.

In 1972, Dr. Nieper told reporters while in the U.S.: “After more than 20 years of such specialized work, I have found the non-toxic Nitrilosides – that is, Laetrile – far superior to any other known cancer treatment or preventive. In my opinion it is the only existing possibility for the ultimate control of cancer.”

This last quote is from “World Without Cancer,” mentioned above.

Many of the physicians whose anti-cancer programs are detailed in “The Alternative Medicine Definitive Guide to Cancer,” mentioned above, also report positive Laetrile results as part of their cancer treatment programs. Robert Atkins, M.D., the “Diet Revolution” guru, noted that “Amygdalin appears to neutralize the oxidative cancer-promoting compounds such as free radicals… It’s just one more key component keeping cancer from growing or spreading. Contrary to what people have said about Laetrile…it should be considered an effective, entirely safe treatment for all types of cancer.”

Why Not Self-Treat With Laetrile?

In the face of the above evidence and doctor’s recommendations, why don’t I include Laetrile/Amygdalin/Vitamin B17 in the “Self-Treatment” chapter of this book? Here are the reasons:

Laetrile’s use to cure cancer needs to be part of a complete protocol of diet, enzymes, exercise and supplements, AND supervised by a medical professional.

For example, a proper level of zinc in the body is required for Laetrile to be effective. It doesn't work without adequate Vitamin C. Vitamin A interferes with its effects. A build-up of vitamins, enzymes and a proper diet for at least two weeks before starting the Laetrile treatment is necessary. A full stomach lessens the effect of Laetrile. Finally, the dosage of Laetrile requires injections along with capsules. The reaction must be monitored closely and the dosage adjusted over a period of at least three weeks after the body has been prepared properly to receive the Laetrile. Definitely not a "do-it-yourself" operation.

Other treatments, which I do suggest to you as universally necessary for cancer
patients include things you can do yourself with no supervision. These include: immune system boosters, flaxseed oil/cottage cheese, Vitamin C with L-Lysine and L-Proline, Protocol, Paw Paw, EWOT, red raspberry capsules, artemisinin, enzymes, Ph testing and a radically different diet. (See Chapter 5 above.) None of these interfere with any other treatments you may be taking.

Please don't misinterpret me. I'm not saying that any cancer patient should self-treat their cancer. Almost all of the above (with the exception of Protocol and Paw Paw) are treatments that would be appropriate for all of us – cancer patients or not -- and cannot be harmful. It is treatment "until the doctor comes." Literally, while you are locating an appropriate physician or other medical professional with an acceptable treatment regimen, you can help yourself..

In Summary

Laetrile (amygdalin) is an effective preventative and treatment for cancer. It should be used under the supervision of a qualified medical professional.

Shark Cartilage

Another treatment you should be familiar with, but which I would wait to discuss with your chosen CAM medical professional is shark cartilage. Beginning in October 1991, Dr. Williams has published numerous articles on this subject in his Alternatives newsletter.

I feel the best way to familiarize you with this option, however, is to quote from an article by the discoverer of shark cartilage, I. William Lane, Ph. D. When I called Lane Labs, the sole source for both MGN-3 and shark cartilage, to check on their relationship to Dr. Lane, I got his son on the phone. He said that while his father had no financial interest in Lane Labs, he did consult with them frequently on the products they produce, including shark cartilage.

As you may remember from Chapter 3 above, the FDA has now shut down Lane Labs. I will give you information here on their shark cartilage because I think it is an interesting case study of the harrowing nature of the fight to bring natural treatments to us.

Dr. Lane began studying shark cartilage as a potential cancer therapy in September 1983. Using his own funds, he conducted studies in Belgium and Mexico. Studies in the United States were too expensive. However, in September 1992, he aroused the interest of the Cuban Health Ministry. They invited him to do a study on non-responsive terminal cancer patients. Here is an excerpt from an article he wrote in 1995 for Alternative & Complementary Therapies -- A Bimonthly Publication for Health Care Practitioners:
"The Cubans agreed to provide me with 29 patients and a team of five oncologists, seven nurses, and the best possible follow-up. The Cuban study has, as a result of extensive coverage and story by Mike Wallace and '60 Minutes,' become a legend.

These 29 patients were all unable to get out of bed, and all were designated as terminal and dying. They had failed to respond to all available conventional cancer therapy. I almost gave up on the first day. I felt that my chances with such advanced patients were nil, a belief shared by the Cuban oncologists, headed by Lt. Col. Jose Menendez, M.D.

There were 10 different tumors represented including five in the prostate, six in the breast, five in the central nervous system, two in the stomach, two in the liver, two in the ovary, two in the uterus, two in the esophagus, two in the tonsils, and one in the urinary bladder. By the fifth week I learned via my telephone and fax that the Cuban team was becoming very hopeful. I was due to visit on the sixth week.

Earlier, I had been contacted by CBS and '60 Minutes.' The station wanted to go ahead with the story, which the station had initially looked upon as a scam. For the visit on the sixth week of therapy, I, thus, was accompanied by David Williams, D.C., the editor of the health newsletter Alternatives, five people from '60 Minutes' (including the producer Gail Eisen, who was medically oriented and initially very negative about the story), and Charles Simone, M.D., a consultant who I had asked to help me evaluate the results. It was clear to all of us that a number of the patients were already responding.

Except for Dr. Simone, who joined us at 16 weeks, this same group visited again at 11 weeks and again at 16 weeks. We were joined at this time by Mike Wallace, who stayed with us in Cuba for three days to review the results and to do filming.

At this time, the Cubans had added Fernandez Britto, M.D., a world-class pathologist, to the team. He showed, for the first time, autopsy pathologic slides that demonstrated the action of the shark cartilage in stimulating the rapid growth of fibrin tissue replacing and encapsulating the cancer cells. His slides, which now include 'before' and 'after' biopsy slides, add materially to the explanation of how and if shark cartilage works.

'60 Minutes' later showed X-ray pictures along with blood work records to Eli Gladstein, M.D., of the University of Southwestern Texas for collaboration; Dr. Gladstein confirmed the findings and he did so without knowing that shark cartilage was the therapeutic agent.
The '60 Minutes' team was so excited about these results that it broadcast the show within 10 days after their tape was finished; and they showed it twice, something that is rarely done. The team also promoted the story each time for four days prior to the broadcast.

Fortunately, this show had a budget that was large enough to truly study the effects, see the patients, and then report on the positive results they themselves observed. The National Institutes of Health (NIH), on the other hand, surprisingly, never took the time to hear the whole presentation, see the slides, talk to me, or talk to the interested doctors."

"Of the original 29 terminal patients, nine (31 percent) died of cancer, all within the first 17 weeks; none have died of cancer since; six others have died of accidents, heart failure, or other natural causes; 14 (48 percent) are completely well and cancer-free after 34 months (almost three years) as of June 15, 1995. After the 60 gm/day of shark cartilage for 16 weeks, these patients went to the maintenance dose of 20 gm/day, which appears to have been keeping them well for almost three years. With stage IV cancer patients, this is very impressive, even incredible, even if one or two patients might have been at stage III rather than stage IV at the outset.

All cancers had been biopsy-confirmed. The head Cuban oncologist, Dr. Menendez, told me recently, 'In my history as an oncologist, I have never seen or experienced anything like this response with shark cartilage.'"

Here are Dr. Lane’s own words on his discovery.

"I am proud that I was willing to put my own money on the table to develop the shark cartilage therapy, and I will defend the results as will others who have seen the responses.

Peer review is a cornerstone of our system but other results, if well documented and supported, should not just be discarded and ridiculed.

The poor results with conventional cancer therapy should suggest that any new therapy that seems promising should be investigated, especially if it is inexpensive, nontoxic, and noninvasive. In these times of uncontrolled health costs, and the cancer epidemic that does not seem to be abating, all possibilities deserve attention."
Summary

If shark cartilage becomes available again, I don’t recommend self-treatment with it. My concern has to do with dosage and monitoring. For both, you need the advice of a medical professional.

Essiac Tea

If you have been surfing the Internet at all looking for cancer treatments, you have no doubt heard of Essiac Tea. There are many testimonials of its effectiveness against all types of cancer. Here is some background on it.

Essiac tea is a blend of herbs. The formula had been passed up through the Ojibwa medicine men. In 1922, it landed in the hands of an Ontario, Canada nurse named Rene Caisse. Although Rene was not ill at the time, she asked for the formula in case she might ever need it. Unfortunately and ironically, a member of her family had been diagnosed with cancer and was given six months to live. Sensing that she had "nothing to lose" Rene decided to test the product she came to call “Essiac” (Caisse spelled backwards) tea on her dying aunt. The result was that the woman went on to live another 21 years. She eventually died of natural causes.

Inspired by her aunt's success with Essiac tea, Rene Caisse began to offer the remedy's recipe to anyone who asked for it. Soon thereafter, Dr. Charles Brusch (personal physician to former President John F. Kennedy) learned of the success of Essiac tea and became a research partner with Rene.

The original formula of Essiac tea apparently had eight herbs. The common blend today contains Burdock Root, Sheep Sorrel, Turkish Rhubarb Root, Red Clover, Watercress, Blessed Thistle, Kelp and Slippery Elm bark. Although no formal, clinical studies have been performed to support the merits of Essiac tea, many, many people have praised its effectiveness for relief from ailments that include cancer, arthritis, circulatory problems, urinary tract infections, prostate irregularities and asthma.

From 1922 to 1978 Nurse Caisse helped thousands of people with her original herbal formula at her clinic in Bracebridge, Ontario, Canada. Although she refused payments for her services she accepted donations to help support her clinic. Rene Caisse dedicated her life to helping others alleviate their pain and suffering with the use of her Essiac® formula.

If you do a search on Google, you will find 34,200 or more references to “Essiac tea.” One source which claims to have Nurse Caisse’s original formula is:
http://www.myhealthpro.net

Another possibly good source is:

http://www.essiacsource.com

Nurse Caisse’s own account of her experience can be found at:

http://www.comboweb/com/essiac/nurse.htm

Summary

I exclude Essiac tea from the “self-treatment” category only because it is critical to verify the integrity of the source. Since I have no objective evidence on which to base a recommendation, I leave this decision to you and your medical professional.

Pau D’Arco Tea

Lots of people have been cured of all kinds of cancer by drinking Pau d’Arco tea (also known as Taheebo tea). Obviously, it is something you should know about.

Roger DeLong is a retired airline pilot who cured himself of cancer using Pau d’Arco tea. He was so convinced it would help people that he set up a simple, inexpensive way for cancer patients to get it. For two years, Roger imported it by the ton and sold it (he even gave it away to those who couldn’t afford it) at $14.95 a pound, which was just about his cost. A pound is a one-month supply.

My wife took it for her candida and swore that it helped her. We gave some to a friend who had cancer. I wrote it up in my newsletter.

Unfortunately, in December 2002, Roger decided that the demand was too great for him to handle alone as he had been doing. I will quote you an e-mail he sent me explaining the current status.

“Bill,

It is a real dilemma to recommend a source to buy the tea. The reason that I initially started selling the tea is that no one sold the bulk herb in one pound quantities at a reasonable price. That is still the case...

The only reputable source that I know is http://www.healthweigh.com and they sell it at $50 per pound and throw in some free stuff. They have the best quality product that I have seen. They focus their sales toward health practitioners and
medical clinics. They have quite a list of M.D.’s that are using and testing the tea plus their vast list of historical customers. They haven't marketed or advertised yet. I've received several samples from different sources. I can't recommend any of them. Also, no one is completely knowledgeable of Pau d'Arco as I am with 15 years experience communicating with the users of the tea and my complete research studies. The production and importing of the tea is minimal and is a study in itself.

My efforts now are to get the herb fully researched by proper authorities and published in medical journals. Very tough job with the state of our medical society controlled by big money interests. It has to be researched with the N.C.I. protocols in phase I, II & III clinical studies. The N.C.I. won't do it so will have to be through private sources.”

You may want to try HealthWeigh as a source. However, I have no feedback on them other than what Roger said above. Caveat emptor! The healing properties of this tea when it is harvested and processed properly are awesome indeed.

Grape Juice

Grape juice is one treatment I was considering putting in the "self-treatment" category. Here is an account from a “true believer.”

"My experience with this grapeseed diet is good. About 5 years ago I came across it in a book called 'Magnetic Therapy' by Abbot George Burke, 1988, DeVorss & Compmpany, P.O.Box 550, Marina Del Rey, Ca 90294

In it the author describes the Grape Cure as suggested by Fred Wortman, of Albany, Georgia, and told by Joseph F. Goodsavage, and printed in this book, 'Magnetic Therapy.'

'-The doctors,' Mr. Wortman said, 'refused to operate when they discovered the condition of my bank balance.' Being a wide reader, he remembered a simple remedy for cancer that was given in a book by a 'Mrs. Brandt,' and looked it up. It was rather involved and cumbersome to follow, so he reduced it to its essentials, took the cure and was completely cancer-free within a month.

Wortman then had his experiences published in the 'Independent' and received hundreds of replies. Over two hundred cancer sufferers reported complete cure—total recovery. The grape treatment cured lung cancer in two weeks, he reported. Cancer of the prostate took a little longer—about a month. Only four cases of leukemia (cancer of the blood) were treated, but the judicious usage of grape
juice cured them all.

**The Self Treatment:**

Start the treatment like this: Begin with twenty-four ounces of (dark Concord) grape juice the first thing in the morning. Do not eat until noon. Take a couple of swallows every ten or fifteen minutes (don’t gulp it down all at once). After twelve o’clock, live the rest of the day normally, but do not eat anything after 8 o’clock in the evening....Food seems to carry off the curative agent in the grape juice, which may be Magnesium, so stick to the fast between 8 PM and noon the following day.

*Keep this up every day for two weeks to a month...The dark Concord grape juice treatment is reported to be nearly 100% effective.*

Later on Wortman collected information on four hundred cases treated successfully this way. (All this is found on pages 52 and 53 in the above named book.)

-----------------

When I took it myself for general health several times, I felt great, lost some weight (about five to eight pounds over a month) and it was easy to do. I am grateful for having found this ‘diet,’ because I remember the old Italians always saying, ‘Se vuoi stare bene devi fare una mangiata di uve per due settimane, ogni tanto.’ {If you want to stay (be) healthy you have to eat a lot of grapes, [only grapes], for a two week period every now and then.} Hmmm....they seemed to know a lot back then, eh?...

The danger of this diet may be that the Concord grape juice (or any dark grape juice) may be contaminated with pesticides, hormones (GMO), and/or may be grown in soil where there is fluoride in the water that is absorbed by the grapes. To minimize this risk, either buy organic grape juice, Kosher grape juice, or know the farm where the grapes are grown and make your own grape juice. (Also, *excess sugar* is now found in a lot of grape juices made from concentrates, ‘to make it taste good’/supermarket brands... etc.)

This search for good grape juices could be a bit awkward at times but can be more effective as a self-help treatment and certainly worth the extra effort. Good luck."

**Caution**
The above seems to indicate that this common staple might be worth a try. It’s food, after all. The caution I advise is the result of the following e-mail I received a few weeks after first publishing the above in one of my newsletters.

“Hello,

My name is Bob Rabel. My wife has been battling ovarian cancer for three years now. We’ve tried many supplements and diet changes, some successful, some not. I appreciate your newsletters greatly. However, you might want to tell your readers what my wife experienced. She tried the grape juice therapy in your newsletter. She used pure organic 100% Concord grape juice just as the therapy advised. Many know that cancer cells grow 3 to 5 times faster in high levels of glucose. We were a little bit skeptical about the fructose content in grape juice. Turns out we were correct. Her tumor marker almost jumped 100%. In her 3 1/2 years it has never jumped higher than 25%. Keep in mind this was just one month’s time. A word of caution might be given with this therapy because, in my opinion, the grape juice was the culprit.

Sincerely,

Bob Rabel”

Thank you, Bob. I can only hope the effect on your wife’s condition was temporary. Because of the adverse effect of sugar on cancer, I’d suggest if you want to try the grape seed treatment, you order “O.P.C. Grape Seed Extract,” 50mg, 60 capsules for $7.47 from www.ourhealthcoop.com

Cesium Chloride

An item I read recently reminded me of the difficult time we had trying to get my former wife’s doctor to control her pain. I finally discovered a pain clinic at our University of Texas Health Science Center. A wonderful doctor there got it under control using MS-Contin, a form of time-release morphine. That was in 1994.

But now, there may be a much better solution -- a natural, non-prescription substance called cesium chloride that controls severe cancer pain.

Here's the excerpt which caught my attention:

Beginning on page 313 of the book "Painfree in Six Weeks" by Dr.Sherry Rogers:

"The Pain of Terminal Cancer

No pain is scarier than that of terminal cancer. And you will be as amazed as I was to discover that researchers have shown that it can be terminated in some
cases in less than one day, in fact within a matter of hours with a simple over-
the-counter mineral. This is in spite of these cases being resistant to morphine
and other standard narcotic treatments. And even more excitingly, persistent use
of this common mineral has been part of a program where inoperable or
metastatic end-stage tumors have even shrunk and totally disappeared.

Cesium (pronounced seez’ e um), is the non-toxic mineral, that in some folks has
stopped cancer pain within 12-24 hours in many cases. And when combined with
other minerals and vitamins, all non-prescription, it has caused complete
disappearance of tumors within 3 months to two years in some cases (again, it
depends on each person’s total load and individual biochemistry).

Why haven’t we heard of it? The same reason the media does not feature the
stories of folks with end-stage cancer who have totally healed themselves of all
cancer and metastases with diet and other non-prescription treatments. There is
no money in it and, more importantly, it does not deify and empower those who
want total control over your pain and health.

Normal cells get transformed into cancer cells via the combination of (1)
environmental chemicals that generate free radicals and (2) nutrient deficiencies
from a poor diet. Even government studies show that 95% of cancer is caused
by diet and environment. The free radicals in turn damage genetics and other
regulatory mechanisms and membranes. With damaged cell membranes, as one
example, oxygen can no longer readily enter the cancer cell, but glucose or
sugar can. In fact, sugar is like fertilizer for cancer cells.

To better understand how cesium works, let’s look briefly at the inside of a
cancer cell and see what else makes it different from normal cells. Normal
healthy cells live, breath and make energy via a process called aerobic (with
oxygen) metabolism. They rely on oxygen. The cancer cell does not rely heavily
on this process, having switched its chemistry to a fermentative process using
much less oxygen, but lots of sugar (anaerobic). Now you can see why taking a
box of candy to a cancer patient is like pouring gasoline on a fire. Sugar and
alcohol are like fertilizer for cancer.

Cesium chloride (the only form suitable for human consumption) is available
from:

http://www.TheWolfeClinic.com/cesium.html

They have tablets in various sizes -- 10 mg, 50 mg, 100 mg, 500 mg and 1,000
mg. A bottle of 100 of the 500 mg tablets, for example, costs $75. A bottle of
100 of the 10 mg tablets costs $29.95. Dr. Wolfe is available for telephone
consultation on dosage. The pain relief from this substance is, quite obviously,
not limited to terminal cancer patients.
They cannot ship this product to an address in Canada. They can ship to the U.S. Shipments to other countries will depend on customs regulations.

There is a **minimum order of three bottles** at one time. They can be of various sizes. They ship them in 4-6 business days or overnight, if you ask for it. The clinic is located in British Columbia, so they are in the Western time zone. You can reach them at (800) 592-9653 or (250) 765-1824.

**Caution**

A reader with some experience with this substance warns that you have to take it *with food*. She said it can cause *stomach bleeding and irritation* otherwise. You should also take it with *potassium* and *other supplements* to avoid heart palpitations.

Another reader (an RN) with some experience with it warned *not to* trust Dr. Wolfe’s advice and not to *try self-treatment*.

Based on the above, I suggest you try cesium chloride *only* under the supervision of your own medical professional.

**PolyMVA**

Several readers have alerted me to a very helpful substance called PolyMVA. From what I have been able to learn from my own research, I’m convinced this is a valid substance, both as a *preventative and a self-treatment*.

Poly-MVA (*MVA = mineral, vitamins and amino acids*) is a non-toxic antioxidant composed of alpha lipoic acid and the element palladium. Developed in the U.S. by Dr. M. Garnett, the discoverer of the Second Genetic Code, it has already proven effective against many degenerative diseases, including cancer.

My research on the Internet turned up the Advanced Brain Tumor and Cancer Poly-MVA Hospital in Tijuana, Mexico as one of the first treatment centers for this therapy. Starting 20 years ago with treatment of brain tumors, they have now determined that the therapy is just as effective for *virtually all types of cancer*.

For lots of testimonials and to order it online, check out both of these sites:

http://www.polymva.net

http://www.polymvasurvivors.com
The Catch

One of those survivors is a personal friend now. She arranged for me to talk to her Businesswoman’s Luncheon group in Austin, Texas.

So, what’s the catch? Why wouldn’t this qualify as a good self-treatment? In a word – **expensive!!** An 8 oz. bottle costs **$330.** A month’s supply is four of these. There are much simpler and cheaper alternatives, which, in my opinion, are equally effective.

OTHER CANCER CURES

In this section, I will summarize all the other “alternative” cancer treatments I have found in my years of research. In studying these, ask yourself the obvious question: “Why hasn’t at least one of these inspired the official cancer research community to explore it further?”

Rife/Bare Electrical Resonance

Cancer therapy and electrical frequency resonance met first in the 1930’s. Dr. **Royal Rife** built the device. In 1934, physicians from the University of Southern California allegedly conducted **clinical trials.** They used it on 16 cancer patients at the Scripps Ranch in California. The results? Within 60 days, 14 of the 16 people were pronounced cured of their cancers. The remaining two people were pronounced cured within the next 60 days.

The Rife Device, using electrical resonance, had the ability to destroy or devitalize specific cells and microorganisms. It is alleged to have the ability to remove **cataracts** from patients’ eyes.

James E. Bare, D. C., picked up the torch. He published a **book and videotape** in **1995.** The book, *Resonant Frequency Therapy -- Building the Rife Beam Ray Device,* includes instructions on how to build the device. Mr. Bare claims that anyone can build it in about **four hours.**

The videotape includes examples of the device’s effect on blood samples containing disease microorganisms. There is also available an audio tape of a **lengthy interview** of Mr. Bare on The Laura Lee Show, a radio talk show, in **1996.**

You can find all the above materials and a lot more information at: [http://www.lauralee.com/rife.htm](http://www.lauralee.com/rife.htm)
Since getting to know Dr. Randy McCreary and his low frequency magnetic therapy (see MSB Holistics in Chapter 6 above), I have had little faith in the more primitive “Rife machines” (self-built or manufactured) which try to duplicate his cancer treatments.

"The Cure For All Cancers" (?)

Hulda Regehr Clark, Ph.D., N.D., is a remarkable person. I'm sure you will find her book, *The Cure for All Cancers*, as fascinating as I did. Published in 1993, this book documents not only 100 cancer cases she treated personally but also instructions on building an electronic device to replicate her tests.

Dr. Clark's hypothesis is that parasites, or intestinal flukes cause all cancers. Her Doctorate is in biophysics and cell physiology. After working on Canadian government research projects for eleven years, she began private consulting in 1979. In 1990, she put together her theory on cancer cause and cure.

The parasites Dr. Clark claims to have isolated come from all manner of toxins in our food, our water, our cosmetics and even the fillings in our mouths. Eating out of Styrofoam containers is a "no-no." In fact, she lists multiple everyday items which contain traces of 33 "unnatural chemicals" harmful to our bodies (arsenic, barium, cobalt, lead, radon, tin and so forth).

The constraints she suggests on your life to avoid all these "cancer causers" are so severe, most of us would simply throw up our hands in despair, as I did. For example, you must stop smoking (good idea!); change your copper water pipes to plastic; remove all chemicals from your house; board your pets with a friend; get rid of any possible asbestos sources (hair dryer and clothes dryer); have your house tested for radon; remove all possible formaldehyde (“if your bedroom is paneled, move out of it and keep the door locked.”); remove all possible arsenic (wallpaper glue, roach killer, lawn chemicals, etc.); check your home for exposed fiberglass; and check your gas heat and gas water heater for leaks.

She's not done. You also have to remove all metal fillings from your mouth and have infected teeth removed and "cavitations" on your jaw by an oral surgeon. I agree with her that toxins leeching out of our teeth are the unrecognized (by the "establishment") cause of many diseases. I'll have to cover this in the next book.

Dr. Clark's theories about the cause of cancer are not that "radical." She mentions cell "mutations", just as Dr. Roizen [in Chapter 2] did. Her contention is that she has discovered the CAUSE of the mutations. It is "intestinal flukes" which migrate primarily due to the presence in our bodies of isopropyl alcohol.
Dr. Clark uses **247 pages** of this book to cover the **103 case studies**. Fascinating reading. At least **three dozen** of her case studies followed her instructions meticulously and were **cured**. In fact, one of the most convincing features of her book is the inclusion of dozens of cases of patients who **did not** follow her regimen and, in most cases, came for only a single visit.

Dr. Clark has **added much** to the understanding of **causes and cures** for cancer. No study of alternative/complementary cures is complete without looking at her work. Like other pioneers, she has been **persecuted** by our medical “system.” In 1999, the FBI **arrested her** in San Diego and extradited her to Indiana where she was tried for “practicing medicine without a license.” After she had spent **several months in jail**, all **charges were dismissed** in a trial in April, 2000.

She wrote another book in 1995 called “**The Cure For All Diseases.**” Either of her books is available at many health food stores or on amazon.com.

You can get the full story on Dr. Clark, including her brief stint in jail in 1999 at: [http://www.drclark.ch/](http://www.drclark.ch/)

Included at this web site are **47 detailed testimonials** of cancer patients cured using her methods.

In summary, there are better and easier methods for getting cancer-free than those Dr. Clark recommends.

**On Our Own Terms – An “Aside”**

In 2000 I saw Bill Moyers’ six hour TV special on **death and dying** called “**On Our Own Terms.**”

The intimate interviews with dying people and their caregivers and doctors were **extremely moving** for me. It brought back **many memories** of my own experience with my former wife, Marjorie. It also caused me a great deal of **frustration** to see the **needless suffering and death** that is occurring every day because of ignorance of what you are reading here.

None of the alternative therapies we are covering here actually **shorten your life**, as do most chemotherapy and radiation treatments. They do not **destroy your immune system**, as do most chemotherapy and radiation treatments. They are **non-invasive and non-toxic**. They don’t kill patients, even when they don’t cure them.
“Most cancer patients in this country die of chemotherapy,” observes Dr. Alan Levin of the University of California Medical School. “Chemotherapy does not eliminate breast, colon or lung cancers. The fact has been documented for over a decade…Women with breast cancer are likely to die faster with chemotherapy than without it.”

As you read about the various therapies in this book, remember that they are included here because they have healed at least some cancer patients. Unlike conventional medicine, I don’t define “healed” as survival for five years. I define “healed” as being able to return to a normal lifestyle and maintain it indefinitely.

Antineoplasston Therapy

The following is a classic example of how our medical system reacts to a discovery that may fundamentally alter current beliefs. This negative reaction parallels the public punishment of medical pioneers down through the ages.

“The body itself has a treatment for cancer,” says Dr. Stanislaw Burzynski. The Polish-born physician-biochemist, based in Houston, Texas, discovered that a group of peptides (short chains of amino acids) and amino-acid derivatives occurring naturally throughout our bodies inhibit the growth of cancer cells.

In his view, these substances are part of a biochemical defense system completely different from our immune system. Unlike the immune system, which protects us by destroying invading agents or defective cells, the biochemical defense system reprograms, or corrects, defective cells. It carries “good” information to abnormal cells, instructing them to develop normally. Does this remind you of the “proofreader” cells we discussed above. Our bodies are wonderfully complex creations.

Dr. Burzynski named these peptides anti-neoplastons because of their ability to inhibit neoplastic, or cancerous, cell growth. He discovered that cancer patients have a drastic shortage of these compounds in their bodies. Blood samples of advanced cancer patients reveal only 2 to 3 percent of the amount typically found in healthy individuals. By simply reintroducing the peptides into the patient’s bloodstream, either orally or intravenously, he brings about tumor shrinkage or complete remission. In many cases, just weeks after the start of treatment, tumors have shrunk in size or disappeared.

Since the Burzynski Research Institute (BRI) opened in 1977, Dr. Burzynski has treated some 4,000 cancer patients, most of them in advanced stages. There is no doubt from the peer-reviewed literature he has published (150 scientific papers) that his treatment works, at least for some patients. In fact, he holds 20...

**Cancer-Free**

patents for antineoplaston treatment covering **16 countries**. Dr. Burzynski advises that antineoplaston treatments are neither effective against all types of cancer nor for all patients.

Burzynski’s breakthroughs are being eagerly pursued abroad. Clinical studies are underway in **Japan, Poland, Great Britain, Italy and China**. In September, 1990, the Burzynski Research Institute entered into a letter of intent with Ferment, a major Soviet pharmaceutical firm, to conduct **clinical trials** with antineoplastons on cancer patients **in Russia**.

How has his work been received in the United States by the cancer “establishment?” Well, you probably guessed it. His work has been dismissed as **quackery** by such interlocking government agencies as the Food and Drug Administration and the American Cancer Society. Oncologists, when asked by patients about Dr. Burzynski, respond that he **hasn’t published anything**.

The FDA **filed suit** against Dr. Burzynski in March 1983 in an attempt to drive him out of business. It ordered Burzynski and his Institute to stop all further research, development, manufacture, and use of antineoplastons. A federal judge allowed the doctor to continue his research and treatment **within Texas** but ruled he could not ship the drugs across state lines.

In July, 1985, **FDA agents** and federal marshals, armed with an illegal search warrant to look for vague “violations,” **raided** the Burzynski Research Institute and seized over 200,000 **confidential documents**, including private medical records. They went through Dr. Burzynski’s personal correspondence and rifled his briefcase. The federal officers loaded **eleven** of his filing cabinets onto their truck in an outrageous violation of his (and patients’) constitutional and civil liberties. Dr. Burzynski sued the FDA for the return of his records, but all the documents remain in the FDA’s hands to this day.

The Texas State Board of Medical Examiners tried to revoke Burzynski’s medical license in 1988 on hairsplitting technical charges that had **no connection** with the quality of care he provides. Hundreds of letters of support were sent to the board by Burzynski’s patients and their families and friends. The following letter from a Midwestern teenager was typical:

“I am 13 years old and I have a 7 year old brother. We love our father very much. Thanks to Dr Burzynski’s treatment, my father’s tumor has stopped growing. All of the doctors in my home state of Missouri said there was no cure for my father’s disease. Dr. Burzynski gave him a chance for life again. Please don’t take that away from us.”
There’s more to this story. If you want the complete story and several more case studies, please get the book “Options – The Alternative Cancer Therapy Book” by Richard Walters, copyright 1993 published by Avery. It is available from amazon.com.

The bottom line is that to the American medical monopoly, Dr. Burzynski and his therapy are a threat in at least three ways. First, if his theory about a biochemical defense system separate from the immune system is correct, the biology textbooks will have to be rewritten. His theory is revolutionary in its implications and he has impeccable credentials.

Second, although he is an alternative healer, Burzynski plays by the rules. He publishes his findings openly and widely in the peer-reviewed medical literature. This makes it harder, but obviously not impossible, to smear him as a quack.

Third, and most important, his safe, non-toxic cancer treatment, with its tremendous promise, is perceived as a threat by the mega-billion-dollar cancer business with its vested interests in toxic chemotherapy, radiation and surgery. Orthodox doctors and the huge drug companies would not welcome a safe, relatively inexpensive cancer cure – such as naturally occurring peptides, an herbal brew, or something similar – that can’t be marketed to reap super profits.

Contact information for Dr. Burzynski’s Houston clinic is in Appendix A to this book.

**My Personal Experience**

My information about the Burzynski therapy is second hand. A close personal friend who I will call “Paula” (not her real name) had a hysterectomy on September 17, 2001. The pathology report showed endometrial cancer cells in the lining of the uterus. In a few days after the operation, she began taking magesterol, a hormone.

Recovering nicely, she began taking several CAM products -- MGN-3, beta glucan, shark cartilage and acidophilus. She was feeling good.

Paula and her husband read lots of literature on cancer, including my book “Cure Your Cancer.” They decided to try the Burzynski Clinic in Houston, Texas. After sending Paula’s records a couple of weeks before, they visited the clinic at the end of October 2001. Their experience was anything but positive.

After waiting one hour beyond their appointment time, they were seen by one of the physicians. Paula commented to him that they probably wouldn't have had to wait an hour if she had been Jane Seymour or one of the other celebrities.
whose pictures filled the walls of the fancy clinic building.

Their interview with the physician proved that he had not looked at Paula's records. This, of course, bothered them.

Paula had a discussion with Dr. Burzynski, himself. She asked him if he had statistics on the treatment's success with ovarian cancers like hers. He said they didn't have enough to compute valid success rates. She also asked him for names of CAM-sympathetic doctors in San Antonio. He said he would get her some names.

As for Paula, she was given a large number of pills called PBN (sodium phenylbutyrate). She was told to begin with 1 every two hours, six times a day. That was to be built up to NINE every two hours. They said to continue taking the MGN-3, but stop taking the beta glucan and acidophilus because they interfered with this treatment.

By the time she reached the FIFTY FOUR pills per day level, Paula was very sick. She was so nauseous, she could not hold down either the Burzynski pills or any other medication or food. She called the Burzynski Clinic. The physician said stop taking the PBN until the nausea went away, then begin at a lower level again.

When Paula asked for the names of CAM-competent doctors that Dr. Burzynski had promised her, the physician said Dr. Burzynski was out of town and he didn't know anything about that.

The statistics that Burzynski publishes are not very impressive. For example, they showed that as of July 2001, the "objective response" rate for both colon and breast cancer was 57.2%. The rest had either "stable disease" or "progressive disease." Objective response means “complete response, partial response or substantial decrease in tumor size.”

The cost: $4,500 PER MONTH. They handle only outpatients. The payment seems to cover only office visits (about every six weeks, in Paula's case) and the medication. While a few insurance companies will reimburse for the treatment, Medicare will not.

Obviously, I'm not a great fan of the Burzynski treatment. I would consider it only as a last resort for brain tumors.
The 714-X Compound and Gaston Naessens

A French biologist now living in Canada, Gaston Naessens developed a non-toxic treatment for cancer and other degenerative diseases. Called 714-X, the compound is an aqueous solution of nitrogen-enriched with camphor molecules. Camphor is a natural substance derived mainly from the camphor tree of East Asia. The camphor-nitrogen compound is injected into the body’s lymphatic system. It is said to strengthen the patient’s ravaged immune system, which then rids the body of disease.

Based on forty years of microscopic and biological research, Naessens’ treatment has restored health to hundreds of cancer patients, many of them diagnosed by orthodox doctors as terminal. Many patients experience dramatic benefits, including relief of pain, improved appetite and weight gain, increased strength, cessation of vomiting, and feelings of well-being. A course of treatment consists of daily injections for at least three 21-day periods, with a 3-day rest between each period. For advanced or metastatic cancer, an average of seven to twelve periods is recommended. Patients can be taught to self-administer the treatment.

Again, detailed information on the science of this remedy and case studies are available in Richard Walters’ book Options, mentioned above. You can also find there detailed information on sources for the substance and treatment. I will not elaborate on it further, because I believe other substances mentioned above are much more readily available and at least as effective.

It’s no surprise that the Canadian medical establishment hounded Naessens. Quebec’s medical-drug complex has dismissed his treatment as worthless. Nevertheless, Canadians can obtain 714-X through the emergency drug branch of the federal government for patients suffering from degenerative diseases (cancer, AIDS, etc.)

His research shares much common ground with that of other cancer researchers. His discovery of pleomorphic (form-changing) organisms in the blood tracks with the immune theories of Virginia Livingston, M.D. (see below) and the electromagnetic frequency generator developed by Royal Rife (see above).

Once again, the establishment dismisses promising research as quackery.

Revici Therapy

Dr. Emanuel Revici has developed another original approach to the treatment of cancer. His non-toxic chemotherapy uses lipids and other substances to correct
an imbalance in the patient’s chemistry. Lipids – organic compounds such as fatty acids and sterols – are important parts of all living cells.

The Romanian-born physician, who practiced in New York City, had applied his wide-ranging discoveries for over sixty years to the treatment of cancer. The great majority of his cancer patients were in advanced stages of the illness. Many years after receiving his treatment, some of these patients were in remission with no signs of active cancer.

Commenting on Revici’s 1961 book, Research in Physiopathology as a Basis of Guided Chemotherapy with Special Applications to Cancer, Dr. Gerhard Schrauzer, a leading authority on selenium, wrote, “I came to the conclusion that Dr. Revici is an innovative medical genius, outstanding chemist and a highly creative thinker. I also realized that few of his medical colleagues would be able to follow his train of thought and thus would be all too willing to dismiss his work.”

Dr. Revici tailored his treatment to the individual. One patient, a forty-three year old man, was diagnosed with an invasive, high-grade of cancer of the bladder at Memorial Sloan-Kettering Cancer Center in September 1980. They said, “The only way you can be treated is if we take your bladder out and give you a colostomy on the side.” He said no. The patient visited Dr. Revici in October and went on his therapy. He has had no other treatment. In 1987, he returned to Sloan-Kettering for a cystoscopy, which revealed him to be cancer-free.

Another patient, a twenty-nine year old woman, was operated on at Memorial Sloan-Kettering in October 1983 for a chordoma, a brain tumor. The tumor was incompletely removed, and she was given a course of radiation therapy. Her condition progressively worsened during the twelve months following the surgery. Dr. Revici first saw her in May 1984. At the time, she was confined to a wheelchair with limited function. She started the Revici program. She subsequently had two babies and functions well. Her only problem is that she walks with a cane.

Revici’s non-toxic cancer therapy never received fair testing or funding in the United States. That should come as no surprise to any of you who have read this far. His methods have been formally studied and put into practice in France, Italy and Austria. He was a distinguished physician who graduated first in his class at the University of Bucharest.

The American media portrayed him as a quack that should have been put out of business. The American Cancer Society put Revici’s therapy on its Unproven Methods blacklist in 1961. In 1984, the State of New York tried to revoke his medical license permanently on the grounds of deviation from standard medicine, negligence, incompetence, fraud, the use of unapproved experimental
drugs, and similar charges. After **four years** of struggle, Revici won in July 1988. The court decision allowed him to **continue treating cancer patients**.

To save his license, Revici’s patients and several medical civil-liberties groups undertook **extensive lobbying** at the state capitol. At the federal level, New York Congressman Guy Molinari held an **all-day hearing** in March 1988 to address the Revici matter and the whole field of alternative cancer therapies. Dr. Seymour Brenner, a respected radiation oncologist in private practice in New York, testified **on Revici’s behalf**.

Dr. Brenner had investigated a number of patients in very **advanced stages** of cancer, **incurable** by orthodox means. Revici had put **each of them** into long remissions. Dr. Brenner had an **independent panel of pathologists** confirm the diagnosis and stage of illness prior to each patient’s initial visit to Revici. He testified that his personal findings strongly suggested Revici has a cancer treatment **deserving further study**, and he proposed that the **FDA conduct such an evaluation**.

In a letter to Congressman Molinari, Brenner outlined a protocol in which a **panel of doctors** would monitor cancer patients placed on alternative therapies. All of these patients would have been **declared untreatable** by conventional means. The letter contained **detailed case histories** of ten advanced cancer patients whom Revici had healed.

It is now almost **fifty years** since Revici developed his non-toxic chemotherapy. An open-minded, unbiased evaluation of it by the cancer “establishment” has **never been done**. Once again, the cancer industry succeeded in suppressing an alternative non-toxic treatment that showed promise to **replace, or at least enhance**, toxic chemotherapy and radiation.

If this type of suppression and ridicule of promising cancer cures interests you, you will find eleven painstakingly documented cases in Daniel Haley’s book “**Politics In Healing**.” I strongly recommend it to you.

**Fighting Cachexia With Hydrazine Sulfate**

Cachexia (pronounced ka-KEK-si-a) is the wasting away process that kills **two-thirds** of all cancer patients, including my former wife, Marge. Hydrazine sulfate **dramatically reverses** this process. It is an inexpensive drug, with **no side effects**. It has a clinically documented anti-tumor action. It causes malignant tumors to stop growing, to reduce in size, and, in some cases, to disappear.

About **half** of all patients who take hydrazine sulfate experience **weight gain**, restored appetite, **extended survival time**, and a significant **reduction in pain**
and suffering. Many patients report an increase in vigor and strength and the disappearance of symptoms of the disease, along with feelings of well being and optimism.

While hydrazine sulfate may not be a sure-fire cancer cure (and what is?), large-scale clinical trials suggest that it affects every type of tumor at every stage. It can be administered either alone or in combination with cytotoxic chemotherapy or radiation to make the cancer more vulnerable to the standard forms of treatment.

Dr. Joseph Gold discovered the effects of hydrazine sulfate in 1968. Cancer has two principal devastating effects on the body. One is the invasion of the tumor into the vital organs and the destruction of the organs’ functions. To the general public, this sounds like the most common cause of cancer death. In fact, it accounts for only 23% of the cancer deaths each year.

The other devastating effect of cancer is cachexia, the terrible wasting away of the body. It means weight loss and debilitation. In cancer, as in AIDS, patients die from the accompanying illnesses, which they would otherwise survive if not for the wasting syndrome.

“In a sense, nobody dies of cancer,” notes Dr. Harold Dvorak, chief of pathology at Beth Israel Hospital in Boston. “They die of something else – pneumonia, failure of one or another organs. Cachexia accelerates that process of infection and the building-up of metabolic poisons. It causes death a lot faster than the tumor would, were it not for the cachexia.”

But what causes cachexia? Cancer cells gobble up sugar ten to fifteen times more than normal cells do. The sugar consumed by the cancer cells is generated mainly from the liver, which converts lactic acid into glucose. (Normal cells are far more efficient users of glucose, which they derive from the food we eat, not from lactic acid.)

When cancer cells use sugar (glucose) as fuel, they only partially metabolize it. Lactic acid – the waste product of this incomplete combustion – spills into the blood and is taken up by the liver. The liver then recycles the lactic acid (and other breakdown products) back into glucose. The sugar is consumed in ever-increasing amounts by voracious cancer cells.

The result is a vicious cycle, what Dr. Gold calls a “sick relationship” between the liver and the cancer. The patient’s healthy cells starve while the cancer cells grow vigorously. Some healthy cells even dissolve to feed the growing tumor.
To break this sick relationship, Dr. Gold reasoned, all he needed was to find a **safe, non-toxic drug** that inhibits gluconeogenesis (a big word meaning the liver’s recycling of lactic acid back into glucose). In 1968, he outlined his theory in an article **published in Oncology**. “The silence was deafening,” he recalls.

A year later, by remarkable coincidence, Gold heard biochemist Paul Ray deliver a paper explaining that **hydrazine sulfate** could shut down the enzyme necessary for the production of glucose from lactic acid. Gold had chanced upon an **eminently logical way** of starving cancer. He immediately tested hydrazine sulfate on mice and found that in accord with his theory, the drug inhibited both gluconeogenesis and tumor growth.

Here is just one of many case studies of hydrazine sulfate’s dramatic effects. In 1987, Erna Kamen, a sixty-three year old lung cancer patient, was administered hydrazine sulfate after her discharge from a Sarasota, Florida hospital. “Basically, my mother was **sent home to die**,” says Jeff Kamen, an Emmy-winning television reporter. “She’d lost a significant amount of weight by then, and she had **no appetite** and virtually **no will to do anything**” (eerily reminiscent of Marge’s condition in 1994).

A doctor had told Jeff’s father, Ira Kamen, that hydrazine sulfate offered at least **a shot in the dark**.” So one Monday in August 1987, a home nurse gave Mrs. Kamen **one hydrazine sulfate pill** shortly before serving lunch. “**On Tuesday morning,**” recalls Jeff, “there was a commotion in the house. My mother had **risen from her bed** like the phoenix rising from the ashes. She was demanding that the nurse bring her downstairs so that she could have breakfast with me…When people you love get into this kind of facedown with death, you’re just **incredibly grateful** for each moment.”

As Jeff describes his mother’s recovery, “**her searing pain was gone**; her **appetite returned at a gallop**.” Within three weeks, her racking cough had vanished and she could **walk unaided**. “In the months before her death, she went on television with me to **tell the nation** about hydrazine sulfate. The National Cancer Institute stopped trashing hydrazine sulfate and began referring inquiries to the UCLA Medical School team whose work had **validated the effectiveness of the drug** long before Erna Kamen began taking it.” Jeff attributes his mother’s death months later to her being “**mistakenly taken off hydrazine sulfate and subjected to an unproven experimental substance**.”

With cancer patients, hydrazine sulfate is usually administered orally in 60-milligram capsules or tablets, approximately one to two hours before meals. It is given first once a day for several days, then twice a day, then three or four times daily, depending on the patient’s response and the **physician’s judgment**. On such a regimen, many terminal and semi-terminal patients have derived
considerable benefit. Patients in the **early stages** of cancer derive the most benefit.

About half of the patients who get the drug administered in the early stages of cancer show an **almost immediate** weight gain and reversal of symptoms. In some instances, the tumor eventually disappears.

The common types of cancer most frequently reported to benefit from hydrazine sulfate therapy are recto-colon cancer, ovarian cancer, prostate cancer, lung cancer, Hodgkin’s disease and other lymphomas, thyroid cancer, melanoma, and breast cancer. These account for over **90 percent** of the cancers reported in this country.

Again, for further information on how to obtain this drug or research it further, do your own search on the Internet or look at Richard Walters book, Options.

**My Concerns**

I do not recommend hydrazine sulfate as a self-treatment regimen because it does not have a proven safe dosage level and treatment regimen. You, of course, are free to form your own opinion. Certainly, it is cheap and readily available.

**Immune Therapies**

Long before Dr. Ghoneum discovered MGN-3, researchers have been working on ways to use the body’s immune system to fight cancer. Right now, much of the research is centered on **vaccines**. You may hear about some of these, so it pays to be familiar with some of the terms.

Monoclonal antibodies are **synthetic cells** created through gene-splicing. The cancer patient’s white blood cells are fused with his or her cancer cells. When the resulting **hybridomas** are reintroduced into the patient’s body, they manufacture specific antibodies. These attack only cancer cells. Attached to anti-cancer drugs or natural toxins, **monoclonals serve as “guided missiles”** by directing he antibodies they manufacture toward their malignant prey.

Still in the research stage, monoclonals promise to be **tremendously expensive**. They will be a boon to the pharmaceutical-medical monopoly if they are ever used for cancer treatment. The media frequently touts them as the next cancer breakthrough.

The American Cancer Society freely admits that it will take ***“many years to find the proper role of these [orthodox immunotherapy] agents in cancer treatment.”***
Knowledgeable observers say this means another twenty years or more. Meanwhile, the ACS continues to use its enormous power to restrict or suppress safe, non-toxic cancer therapies using immune system therapy that have produced remarkable clinical results in human beings. I cover several currently available immune system stimulants in Chapter 5. There were earlier natural immune therapies such as that of Lawrence Burton, Ph.D. (discussed below) and Virginia Livingston, M.D.

**Coley’s Mixed Bacterial Vaccine**

Ironically, *Coley’s mixed bacterial vaccine*, which has perhaps shown a greater cure rate than any other cancer treatment, is totally unavailable. Dr. William Coley (1862-1936) was an eminent New York City surgeon and Sloan-Kettering researcher. In the 1890s, he developed a vaccine made of bacterial toxins that activated immune-resistance mechanisms in cancer patients and cured hundreds.

His daughter, Helen Coley Nauts, D.Sc., has preserved and carried forward his important work. Yet, despite the successful use of bacterial vaccines amply reported in the medical literature since the turn of the century, today's big drug companies have no interest in what they view as merely an unprofitable item.

The bottom line, dear readers, which is rather horrible to consider, is that at any one time, there are thousands of patients in the United States getting aggressive chemotherapy who would benefit from any immune-enhancing measures, even supportive nutrition or vitamin supplements. Do they get it? Unless they seek it out through publications like this one, the answer, sadly, is no.

**Burton’s Immuno-Augmentative Therapy**

Dr. Lawrence Burton uses four blood proteins – substances occurring naturally in the body – to treat cancer. His Immuno-Augmentative Therapy (IAT), developed while he was a senior oncologist at St. Vincent’s Hospital in New York City in the 1960s, does not “attack” the cancer. Instead, it aims to restore normal immune system functioning so the patient’s own immune system will destroy the cancer cells. Ask yourself what happened to the following evidence in the ensuing forty years.

Burton discovered that the components of the blood, which he called blood fractions, are deficient in the cancer patient. When they are present in correct balance, they work synergistically to control cancer cell growth and kill tumors.

His therapy involves replenishing the deficient blood fractions by injecting patients with them in amounts based on daily or twice-daily blood analyses.
Patients continue to self-administer the injections from serum for whatever length of time is necessary, much like a diabetic takes insulin. IAT is non-toxic and has no side effects.

Dr. Burton does not claim that IAT is a cure. He describes it as a means to control and combat cancer. Yet, according to clinical records, 50 to 60% of patients experience tumor reduction. Many undergo long-term regression. Some, even those with terminal cancer, have achieved complete remission.

Many cases of metastatic cancer of the colon and abdomen, treated with Burton’s IAT, have gone well beyond five years of recovery. This is a remarkable achievement since the National Cancer Institute says these types of cancer have a zero five-year survival rate.

There is a clinic in the Bahamas treating patients today based on Burton’s theory. For information on this clinic, go to:

http://www.immunemedicine.com

Cytoluminescent Therapy (CLT)

One of the newest wrinkles in cancer treatment is called “Cytoluminescent Therapy” (CLT). This has been known as Photodynamic Therapy (PDT), which was similar but used a different “sensitizing” agent. A clinic in Ireland specializes in CLT. Dr. Ralph Moss has visited them and published a report that was quite enthusiastic about the efficacy of this treatment. Recent rumors are that it is being introduced in the U.S.

I will quote for you an e-mail from a lady who visited the Ireland clinic for the treatment in late 2002. Here’s how she described the treatment:

“…the theory behind CLT (PDT with a new agent) is that one ingests a sensitizing agent, this one is made from spirulina, which binds almost exclusively to cancer cells, and then infrared and LED light shined on the body will activate the agent through the blood (as it kind of rides to the cancer cells on the cholesterol-like substances in the blood), causing cellular excitement and creating singlet oxygen, an oxidative process, which in turn causes the cancer cells to basically blow up.

Lynnette”

Problems
In addition to the exorbitant cost ($20,000) and the fact that the Ireland clinic is booked for several months in advance, Lynette reports that they have been receiving many complaints about their lack of follow-up after the patient returns home – an essential part of this treatment. I have also heard that the original owners of the clinic had split up and were running competing clinics in Ireland.

Cancer “Cures” A-Plenty

The wide variety of cancer therapies that have proved effective over the past 50 years boggles the mind. I will simply list some more of them here to give you the words you need to research them further on the Internet, if you are interested, using your favorite search engine (Google, Yahoo, etc.).

- Asian herbs
- Ayurveda
- Bioelectric Therapies
- Bovine Colostrum
- Carctol
- Chaparral
- Chelation
- Chinese Medicine
- Chlorella
- Co-enzyme Q10
- Colloidal Silver
- Concentrated Aloe Vera
- Detoxification
- DMSO Therapy
- Far Infrared Therapy
- Germanium
Gerson Therapy
Hans Nieper, M.D.
Haelan 951
Homeopathy
Hoxsey Therapy
Hyperbaric units
Hypertermia
Immunocal
IP6
Issels’ Whole-Body Therapy
Kelley’s Nutritional-Metabolic Therapy
Lactoferrin
Live-Cell Therapy
Livingston Therapy
Lymphotonic PF2
Magnetic Sleep Pads
Mind-Body Treatments
Mistletoe (Iscador)
Moerman’s Anti-Cancer Diet
MycoSoft
N-Tense
Noni Juice
Oncotox
Ozone Therapy
Psychotherapy
Peroxide Therapy
Rain-forest herbs
Selenium
T-Plus
Ukrain
VG-1000
Wigmore therapy
....and many more....

Check a few of those out on your favorite search engine. You’ll be amazed at the wealth of material on them. I have tried to avoid information overload in this book by covering in detail the treatments you should seriously consider. Obviously, this is a judgment call. I am not dismissing any on the above list. Some cancer patients have been healed by each of them.

Conclusion

Do not trust the “system” to take care of your or your loved one’s cancer. Get proactive. Do the research. Get knowledge. Knowledge is power.

Know this. Many different promising approaches to curing cancer and/or preventing its recurrence now exist.

You may want to travel to the Bahamas or Mexico or Ireland or Spain but you don’t have to any more. Your local health food store carries the things you need or you can order them from the sources I list in this book.

Your most difficult search may be to find a doctor who will help you use these treatments to augment “conventional” therapy and test your progress. Keep looking. These doctors are out there in the United States, Canada, Mexico, Singapore, Great Britain, Germany, South America and most other countries.

Don’t Wait For More Proof

Many of these “alternative” therapies are urgently in need of more research to bring out their full potential. Do not hold your breath waiting for that to happen.
Dr. Robert C. Atkins, who many of you may know because of his nutrition books, put it quite succinctly. He said:

“There have been many cancer cures, and all have been ruthlessly and systematically suppressed with a Gestapo-like thoroughness by the cancer establishment. The cancer establishment is the not-too-shadowy association of the American Cancer Society, the leading cancer hospitals, the National Cancer Institute, and the FDA. The shadowy part is the fact that these respected institutions are very much dominated by members and friends of members of the pharmaceutical industry, which profits so incredibly much from our profession-wide obsession with chemotherapy.”

It is hard for most Americans to believe that life-saving and valid therapies are being suppressed deliberately. It just doesn’t seem possible in modern America. Unfortunately, most Americans are dead wrong. The cancer establishment has an eighty-year history of corruption, incompetence, and deliberate suppression of cancer therapies that actually work. This includes the rigging of clinical trials at major institutions in order to discredit non-toxic, natural therapies. Barry Lynes has documented this well in his book *The Healing of Cancer* as has Daniel Haley in “Politics In Healing.” See Appendix A for more information on these books. As Lynes says, “The American Cancer Society is not interested in a cure. It would go out of business.”

Cancer Research Is Fraud

Two-time Nobel laureate Linus Pauling summed up the situation well when he said, “Everyone should know that the ‘war on cancer’ is largely a fraud, and that the National Cancer Institute and the American Cancer Society are derelict in their duties to the people who support them.”

According to Barry Lynes, “At a minimum, the American Cancer Society…should be investigated by the U. S. Justice Department for fraud, false advertising, conspiracy and a variety of other anti-trust, monopolistic crimes.”

Closely linked to the ACS through interlocking directorates is the National Cancer Institute. Funded by the government, and founded in 1937 this agency currently has a budget of over 3 billion dollars a year. Wouldn’t you expect such an agency to be a catalyst for innovation? Shouldn’t they openly encourage any new technique or method that might slow the death count in the cancer epidemic that claims 10,000 American lives every week? NCI is just the opposite. It is a repressive guardian of the status quo that funds an “old boys’ network” committed to chemotherapy and radiation. They actively conspire with...
other government agencies to **harass or thwart** innovative alternative cancer therapies.

Instead of serving the public, “NCI created a bureaucratic haven for scientism, filled with **committee procedures**, payoffs, **collusion with drug companies** and **interminable roadblocks** for the truly innovative cancer fighters,” as Barry Lynes observes in *The Healing of Cancer*.

What the NCI does with their $3 billion in taxes each year is a unique form of **corruption** in the history of science. NCI distributes these billions in research grants and, together with the ACS, sets the dominant trends in research. Incredibly, **90 % of the members** of NCI’s peer review committee get NCI money for **their own research**. **70% of ACS’s research budget** goes to individuals or institutions with which the ACS board members are **personally affiliated**.

“In any other part of government, it would be a **corrupt practice** for the persons giving out the money and the persons getting it to be the same people,” says Irwin Bross, Ph.D., former Director of Biostatistics at the famed Roswell Park Memorial Institute, the nation’s oldest cancer research hospital. Testifying before a congressional subcommittee, Dr. Bross added, “It is a corrupt practice even when it is called ‘peer review’ or ‘cancer research’…This set-up is not worth revamping and should simply be junked.”

**Don’t Be A Statistic**

You need look no further than the **statistics on cancer deaths**. The death rates from the six major killer cancers – cancers of the lung, colon, breast, prostate, pancreas, and ovary – have either stayed the same or increased during the past **sixty years**. If this is a “war on cancer” it has **long since been lost**.

Unlike many other countries, the United States supports only **one kind of medicine**. Because of this, Americans have been denied many vital aspects of the **science and art of healing**. “Your family doctor is no longer free to choose the treatment he or she feels is best for you, but must follow the dictates established by physicians whose motives and alliances are such that their decisions may not be in your best interests,” says Alan Levin, M.D.

**Your Right Of Choice**

Patients’ most fundamental right – **medical freedom of choice** – has been lost in this country. The medical monopoly’s **right to make money** comes before your right to decide – in consultation with your doctor – which cancer therapy would be **best** for your particular condition. The following letter eloquently and
movingly illustrates the dilemma faced by the cancer patient. The author is a psychologist.

“My wife was diagnosed as having terminal ovarian cancer five years ago. She is alive, well and healthy because of non-approved and unconventional cancer treatment.

I am writing this as a letter of protest and in an attempt to educate you and possibly save your life or that of your wife or child. I am not a crazy fanatic, but I am a 48-year-old man who, five years ago, had to decide what to do in order to try to save my wife’s life. We investigated and researched our options and made an informed and intelligent decision to seek something other than what was offered by traditional medicine in this country.

I am angry, frustrated, and mad as hell that I have had to take my wife out of this country, had to struggle with my health insurance company because her treatment was ‘not approved,’ and had to struggle to obtain her medications because they are ‘not approved’ and subject to confiscation. It has been a battle to provide her with alternative cancer treatment.

I now know that there is a financial war going on, and the victims are the millions of people who have been denied alternative cancer treatments because the AMA or FDA or someone has decided that we can only undergo an approved treatment… There are no rights to life or liberty in this country when it comes to freedom of choice in medicine. There is only coercion and subversion and greed – and people dying. We are the financial prisoners of the AMA and FDA, and they are killing us in the name of approved treatment.

My wife was almost a victim; and if you allow this to continue, then one day you will become a victim, too.

Please help to do something to bring truth, sanity and morality back to health care in America.”

Live Long and Die Young!

Thank you for reading this book. Please read the booklets on prevention and treatment of cancer and other degenerative disease with proper diet and exercise. Let’s avoid becoming victims.

If you or a relative or friend suffer from either a sore back or diabetes, please read those booklets, also.
If you already are engaged in the battle of survival with cancer, I sincerely hope that I have given you **ammunition and hope**.

May God Bless You with a long and healthy life!!

Bill Henderson  
Author, Cancer-Free and Cure Your Cancer

APPENDIX A

RESOURCE SUMMARY

Following is a summary of the sources mentioned in this e-book and some others of interest. To get to the websites mentioned, simply click on the underlined link. Your web browser will open and take you to the website. When you close your browser, you’ll come back to the same place in this book (if you’re reading it on your computer). If you are on AOL, this may not work. You may need to “copy and paste” the web site address.

1. **REAL AGE – Are You As Young As You Can Be?, by Michael F. Roizen, M.D., copyright 1999.** Website: [http://www.realage.com](http://www.realage.com)
   
   Learn how each part of your lifestyle affects your lifespan. Is your “Real Age” older or younger than what’s on your driver’s license? Once you take the test, you will have perfect knowledge of what changes in your lifestyle will be the most beneficial. At the website, you can also subscribe to a free e-mail service that will deliver daily tips on improving your health and longevity to your e-mail box.

2. **Antioxidants Against Cancer** by Ralph W. Moss, PhD, copyright 2000. Website: [http://CancerDecisions.com](http://CancerDecisions.com)
   
   This book should be “required reading” for everyone, not just cancer patients. All of us need to be familiar with the antioxidants. This book has lots of detail about specific compounds and their effects on different types of cancer. Many of them have an anti-cancer effect as well. At his web site, you will be able to order any of his 10 books on cancer plus a 400+ page report on each of over 210 cancer diagnoses. These cover both conventional and alternative treatments; supplements you should take, or avoid; and information on European and Mexican clinics. A monthly telephone or e-mail update on each report is also available.

3. **Alternatives newsletter** by David G. Williams, M.D. Website: [http://www.DrDavidWilliams.com](http://www.DrDavidWilliams.com)
   
   Dr. Williams is quoted extensively in this book. For over 20 years, he has traveled the world in search of the best cures for all common diseases. His website has a complete catalog of his newsletters, organized by subject. You can read a synopsis of each article and order those that interest you. I have subscribed to his newsletter since 1985. You can send him e-mail questions...
at his website. I have found no better source for a wide variety of health information.

A complete discussion of the limitations of chemotherapy for the treatment of cancer. If you or a loved one or friend have cancer, you must read this book. It gives you detailed information on each medication used and how effective it is for each type of cancer. **Do not agree to any chemotherapy treatment until you read this book cover to cover plus the 400-page “Moss Report” on your type of cancer available at the website above.**

The first half of this book presents a detailed and documented history of Laetrile (Vitamin B17) and its use in cancer treatment. It describes in detail the suppression of this compound by the Food and Drug Administration (FDA) and the “cyanide scare” used to justify it. The second half covers “The Politics of Cancer Therapy.” The author describes a conspiracy involving American moguls, Nazi officers in Hitler’s Germany and the drug industry in general. Fasten your seat belt. This is a very well-written but controversial book. There are several reader reviews available at [http://www.amazon.com](http://www.amazon.com)

To order apricot seeds and Laetrile/Amygdalin/B-17 tablets, go to: [http://www.smart-drugs.net/ias-laetrile-cancer.htm](http://www.smart-drugs.net/ias-laetrile-cancer.htm)

A hard-hitting expose of the medical establishment’s fifty-year history of suppressing alternative cancer therapies. American journalist Barry Lynes discusses various alternative treatments in this incisive analysis.

I recommend you check out the website first. It includes a 45-minute interview of James Bare by Laura Lee. If you are interested, you can, of course, purchase the book. The book includes detailed instructions for building the Beam Ray Device. My personal opinion is that this device has
been made obsolete by several of the natural cancer therapies discussed in this e-book. If you have some talent as a do-it-yourself electrician, check it out.

This book documents Dr. Clark’s treatment of over 100 cancer cases. She uses an electronic device to isolate the cancer sites. The instructions for building it are in the book. Her theory on the cause of cancer by parasites or intestinal flukes is not completely original. It is interesting and controversial.

For more information on Dr. Clark, go to the web site: [http://www.drclark.net](http://www.drclark.net)

This is Dr. Chopra’s “breakthrough” book – the first in which he created a new understanding of health and illness and the healing power of the mind. He has since written over 25 books, translated into 35 languages, plus over 100 audio and videotape series. In 1999, Time Magazine selected Dr. Chopra as one of the “Top 100 Icons and Heroes of The Century.” You will understand his later work better if you read this book first. His theories about mind-body interaction have now been proven. The scientific proof is covered in the next book on this list.

Dr. Sternberg is a leading expert on the interaction of the endocrine and immune systems, with impressive credentials. She takes us from the origins of medicine in Greece, to the early medical schools in Padua, to modern research in Montreal and the U.S. She clearly describes how we came to appreciate the physiology of stress, how the mind influences the body, and how the body affects the mind. This area of research, in which Dr. Sternberg has been one of the world’s leading scientists for at least a decade, is leading to new understandings and treatments of the stress-related diseases of modern life.

This book gives you specific recommendations on which foods you should eat and not eat based on your blood type. It is based on 40 years of research by Dr. D'Adamo and his father. In the years from 1982 through 1996, the author challenged samples of each blood type (O, A, B and AB) with hundreds of foods, vitamin supplements, condiments and beverages. My family has used this book to avoid certain foods, supplements, etc. and seek out others for the last three years. The book includes specific case studies and recommendations on cancer and other diseases.

His focus has shifted from his earliest books that were mainly concerned with helping people like me to lose weight quickly and easily. His later books, including this one, are more concerned with long-term wellness and healing through natural therapies, including the use of an ongoing enjoyable and healthy low-carbohydrate maintenance diet and vita-nutrient supplementation. This book and Dr. Atkins Age-Defying Diet Revolution detail how to prevent what once were considered inevitable signs of aging through a diet of phytonutrient-rich vegetables (and, yes, fruit!) and use of anti-aging supplements. Dr. Atkins says, “After over 40 years as a practicing physician and over 30 years as Medical Director of The Atkins Center, I have found these are the most effective methods for treating the vast majority of chronic conditions as well as for staying vigorously healthy and forever youthful.” Get this book. [Unfortunately, we lost Dr. Atkins in a fall he took on the ice in front of his hospital in New York early in 2003].

13. American Holistic Health Association, P. O. Box 17400, Anaheim, CA 92817. Phone: (714) 779-6152. Website: http://healthy.net/ahha

At this website, you can enter search criteria (zip code, telephone area code, state, specialty, etc.) and get a list of “holistic” doctors with their specialties in your area.

At this website, you will find information about this group. If you want a directory of their members, you will need to send them $10.

15. The Simonton Cancer Center, P. O. Box 890, Pacific Palisades, CA 90272. Toll free: (800) 459-3424; Local: (310) 457-3811; FAX: (310) 457-0421. E-mail: simonton@lainet.com. Website: http://www.simontoncenter.com/
Dr. Simonton is famous for pioneering studies in the use of the mind to overcome cancer and other diseases. You may also want to read his book *Getting Well Again*. It covers the mental processes essential in recovering from advanced and terminal cancer and other serious ailments.

16. WebMD Health. Website: [http://my.webmd.com](http://my.webmd.com)

A very comprehensive website covering all aspects of health care – conventional and alternative/complementary. This website is a perfect example of the information available through the Internet. Search capability, chat rooms, research results, etc. All-encompassing and complete. It is also an example of one of the main reasons I wrote this book. Laymen need a guide to the vast amount of information available. Without that, it can be overwhelming.

Another comprehensive website for diabetes sufferers. It covers both Type 1 and Type 2 diabetes. Emphasis is on diet and exercise. If you have diabetes or suspect you have it, go here. Same comments about comprehensive nature of this site as those for WebMD Health above.

Gary Null has been updating this reference book since it was first published in 1988. It is written for the layperson but written by an expert. The listings are by ailment, so you can look under whatever ails you – asthma, heart disease, arthritis, diabetes, allergies, cancer, etc. – and take whatever vitamins or herbs are helpful for that specific condition. This book is also available from amazon.com. The last time I checked, it was $16.

This massive (1,116 pages) book is published by the editor of the magazine *Alternative Medicine*. The first section consists of richly detailed accounts of the successful cancer treatment plans of 23 respected alternative physicians from Robert C. Atkins to Charles B. Simone. Part 2 is a fundamental explanation of the nature, causes, politics and prevention of cancer. The final section presents alternative therapies from a to z. It is meant for those who have cancer, their friends and family and (who knows?) maybe even their doctor! It is also available from amazon.com for (gulp!) $49.95. They have used ones available for $29.95. I recently discovered a slimmed down
version of this hefty tome. It is called Cancer Diagnosis – What to Do Next by the same authors. Only $14.95.

Carter describes in detail how, for years, the AMA, FDA and pharmaceutical industry have tried to discredit alternative, less expensive, less invasive and often more effective methods of treatment. He does not sensationalize the topic but documents with evidence how the governing bodies of modern medicine have a vested interest in suppressing these treatments and making sure that average folks never know about them. If you have any doubts about this after reading my book, get James Carter’s. If he doesn’t convince you, I doubt that anything will. This one, too, is available from amazon.com, price: $10.36, with used ones for $7.95.

A comprehensive guide to all forms of alternative cancer therapy known at the time this book was published (1993). Walters has thoroughly documented 28 such therapies. In much more detail than I can do here, he lays out the case that suppression of valid cancer therapies has been a common practice of the American cancer “establishment” for at least the last 50 years.

22. Lorraine Day, M.D. Website: http://www.drday.com

Dr. Day is an orthopedic surgeon. She spent 15 years on the faculty at the University of California at San Francisco School of Medicine. She was also the Chief of Orthopedic Surgery at San Francisco General Hospital.

At her website, you’ll be able to see a streaming video of her describing how she cured herself of metastasized breast cancer. There are remarkable photos of her grapefruit-sized tumor protruding from her chest. Many of her videos on cancer can be purchased at her website. [Again, I feel the need to repeat that I get no cut or any other remuneration from these recommendations.] The video titles will give you an idea of her wonderful healing message:

“Cancer Doesn’t Scare Me Anymore”
“Drugs Never Cure Disease”
“Diseases Don’t Just Happen”
and
“Sorting Through The Maze Of Alternative Medicine"
Don't miss this website.

The “cs” in the site name stands for “cancer survivors.” This is a “real time” chat room. They are merging with “OncoChat,” another chat room for cancer survivors. Here you will find others with an interest in cancer therapy. The advantage of a moderated chat room is that you usually get a relatively “instant” answer to your question.

This lady self-published her 54-page cancer and nutrition booklet in 1997. It was once a best-selling cancer and nutrition book on amazon.com. She has set up an endowment with proceeds from the booklet to help underwrite research about how good nutrition can prevent the recurrence of cancer. For more information, go to:

http://www.DianaDyerMSRD.com

25. The Cancer Cure Foundation

Once you have read this book, you need to explore this company’s site. It is a non-profit organization dedicated to providing information on alternative cancer therapies. At their web site, you will find detailed descriptions of multiple clinics all over the world. They are divided into “Clinics in the U.S.,” “Clinics in Mexico,” and “Clinics Outside the U.S. and Mexico.” They include contact names, phone numbers, addresses, web sites, e-mail addresses, pictures of providers, pictures of the clinics, and pictures of patients with their testimonials. They give a detailed description of the type of treatment given by each clinic, including glossaries of terms. Finally, they give you a list of 8 or 10 of the “Most Popular” clinics. They ask for feedback from their users and obviously they get it. They have been doing this since 1976, but they have adapted their service very efficiently to the Internet Age. Go to:

http://cancure.org

26. Annie Appleseed Project

An awesome lady. Ann Fonfa has taken up the torch for all cancer patients in a very courageous and vivacious way. You need to get to know this lady. At her web site, among dozens of other resources, you will be able to read her three-week diary kept during her successful treatment for breast cancer.
at the Gerson Clinic in Tijuana, Mexico. She lobbies constantly for more research into Complementary & Alternative Medicine (CAM). She is championing your interests. Don’t miss this site:

http://www.AnnieAppleseedProject.org

27. Forbidden Medicine

Here is a web site that is an absolute mother lode of information on alternative cancer cures. Part of it is available free. The rest requires a “membership” fee of $97 (or $15, if you can prove you cannot afford the $97). Don’t blow this one off. It has lots of valuable information and consultations with CAM doctors are available at “reasonable” prices. They will also help members find a qualified CAM doctor in their area. Worth a close look.

http://www.ForbiddenMedicine.com

28. Dr. Ron Kennedy’s web site.

This wonderful doctor’s web site contains an encyclopedic summary of all the alternative treatments. There is even a search engine where you can enter your Zip Code and get a list of doctors or dentists in one or more of the “alternative” specialties in your area of the country.

http://www.medical-library.net/sites/adjunctive_therapies_for_cancer.html

29. Dr. Matthias Rath’s web site

This outstanding German doctor has a very educational pdf booklet on the nature of cancer and its metastasis. Don’t miss this one!

30. Insulin Potentiation Therapy (IPT).

If you have cancer, you need to consider this form of low-dose chemotherapy. Side effects are minimal and the effects of the chemo are magnified several thousand times by using an insulin shot 30 minutes or so before administering the chemo drug (in a very weak dose). This web site includes a list of all the physicians (about 108 at this writing) who are qualified in this important therapy.

http://www.getipt.org

31. Art Brown’s web site.
Art Brown has written a book similar to mine. He is an active participant in several on-line forums concerning cancer treatments. Art is a former employee of the Cancer Cure Foundation. His web site is:

http://www.alternative-cancer.net

32. National Cancer Research Foundation

At Fred Eichhorn’s interesting web site, you’ll find lots of testimonials from cancer survivors – all types of cancer. Fred works hard and charges little to help heal lots of cancer patients. His web site is:

http://www.ncrf.org

33. CancerEducation.com

One of the best sites for comprehensive cancer information. You can see lectures by famous cancer experts. One example: A 71-minute slide show and lecture by Dr. William Fair. Dr. Fair has been on the staff of Memorial Sloan-Kettering Cancer Center in New York for 18 years as a urologist. He was diagnosed with colon cancer in the early 90’s. After two bouts with chemo, and two recurrences, he cured himself with “alternative” methods and has become a zealot about informing people about the inadequacy of the cancer treatments in the allopathic (conventional) medicine system.

http://www.CancerEducation.com

34. Life Extension Foundation

One of the best sources for information about prevention of all degenerative disease, including cancer. They publish a monthly magazine and (of course) a line of supplements. Their prices don’t come close to Our Health Coop, so use this as an information source only.

http://www.lef.org

An enormously useful book for cancer patients to understand their diet choices and a slew of great recipes to help you implement them.

36. The pH Miracle by Dr. Robert Young, copyright 2002.

Here is the ultimate logic behind your body’s need to alkalize to stay healthy.

Dr. Balch discusses enzymes and other natural treatments in detail. $19 in paperback from amazon.com. Also available in an audio playback download for $12.95.

A 169-page PDF download e-book (like this one) that is chock full of information on getting and staying well. Covers all types of illness from the CAM viewpoint.

A treatise on coping with common ailments and the effects of stress on your health.

40. *Alive And Well – One Doctor’s Experience With Nutrition in the Treatment of Cancer Patients*, by Philip E. Binzel, M.D.

An intriguing account of this conventional doctor’s epiphany about the importance of nutrition in the healing of cancer.

41. National Foundation for Alternative Medicine

I think the best way for you to get a flavor of this organization is for me to quote from the introductory message from the founder.

"NFAM OFFERS HOPE TO YOU FOR FREE!

Welcome from NFAM’s Founder and Chairman of the Board, former U.S. Congressman Berkley Bedell

Dear Friends,

Over 1,500 Americans will die TODAY from cancer. That’s over 553,400 individuals in a year! Will someone you know or love be next?

Most people have no options for treatment other than conventional medicine. I am a cancer survivor. I was one of the fortunate few who learned about other innovative, safe, and effective treatments that are often only available outside this country.
Because of my experience and the dedication of others like me, The National Foundation for Alternative Medicine (NFAM) was created to scientifically study, validate, and publicize information about alternative and complementary treatments and to make the findings available to the public free of charge. Most of NFAM's research to date has been in cancer treatment. But as soon as we are able to raise the necessary funds, we will move forward in studying other chronic illnesses such as heart disease, AIDS, Lyme disease, Alzheimers, and diabetes."

Check out their web site and their 70 reports on investigative visits to cancer clinics all over the world at:

http://www.nfam.org/home/

42. Education Center for Prostate Cancer Patients

Right around New Year's Eve, 2001, Ed Van Overloop called me. Ed lives in Park Ridge, New Jersey. He is a cancer survivor. He has been helping cancer patients for 13 years. He runs a support group for about 100 cancer patients and survivors.

Ed co-founded a non-profit organization you should check out if you are a prostate cancer patient. It is called the Education Center for Prostate Cancer Patients. Just go to their web site:

http://www.ecpcp.org

I joined and they mailed me a lot of material: a book called "The Reference Guide to Prostate Cancer;" two periodicals called "The Prostate Cancer Exchange" and "The Prostate Cancer Digest." If you want to speed up the process, you may want to call them. Contact Bettye Rainwater at (516) 942-5000 between 9:00 AM and 3:00 PM Eastern time.

If you're in the New York/New Jersey area, I'd recommend you contact Ed and join his support group. It includes all kinds of cancer patients, not just prostate cancer. His e-mail address is:

edvo31@bellatlantic.net

43. Gavin Phillips web site.

Gavin is a dedicated crusader for alternative cancer cures. His non-profit web site: http://www.cancerinform.org has a wealth of background information for you on why we all need to co-doctor. First, you need to read the article he
wrote which was published in "Clamor" magazine in 2001.

http://www.cancerinform.org/article.html

Browse Gavin’s web site. You’ll be impressed, as I was, at both his knowledge and his sincerity in fighting for your right to medical choice.

44. Alkalize for Health web site.

The web site "Alkalize for Health" is a comprehensive site. Among other things, it features a recipe for "Cancer Self-Treatment." You can find it at:

http://www.alkalizeforhealth.net/cancerselftreatment.htm

The eight-part program they outline for curing or preventing cancer includes information on: Cancer and Oxygen; The Importance of Exercise; Cancer and Ph; Acidity and Free Radicals; Purification Techniques; Enzymes to Dissolve Cancers; Vitamins to Fight Cancer; and Cancer and Meditation.

When you finish reading those 17 pages, you’ll understand cancer a lot better. Check out their more in depth coverage of oxygen, alkalinity, meditation and hyperthermia. If you are more comfortable with another language, this site can be read in French, German, Italian, Portuguese and Spanish.

45. CancerCured online forum.

If you are interested in joining the discussion forum on Yahoo Groups from which I get lots of my information, just send a blank e-mail to:

mailto:cancercured-subscribe@yahoogroups.com

You can just monitor the messages from well-informed people like Art Brown if you don’t feel like contributing.

46. Direct Labs – do-it-yourself blood tests.

There is a new (at least new to me) service available now in the U.S. You can obtain your own blood tests, including some cancer tests, without going through your doctor for a "prescription" for the lab.

Take a look at this web site:

http://www.directlabs.com/
When you call them, they will direct you to a local blood lab in your area for getting a sample drawn. The lab will perform the tests and then mail the results in plain English directly to you. If you prefer, you can have the results sent to a doctor.

47. The Foundation for the Advancement of Innovative Medicine (FAIM)

Monica Miller is a fine art painter turned political lobbyist and legal activist on behalf of doctors and “alternative” medical practice. She has been instrumental in getting “freedom of practice” legislation in place for MDs in her home state of New York.

She also has a website with information on what is happening with alternative medical politics in other states around the USA. She helps legal activists in these other states. You can check her web site to see if your state is progressive in these matters. Just go to:

http://www.healthlobby.com/

Twelve states have laws that protect patient access to alternative therapies from licensed physicians. They are: Alaska, Colorado, Florida, Georgia, Massachusetts, New York, North Carolina, Ohio, Oklahoma, Oregon, Texas and Washington.

Of these, Florida’s laws are the most liberal. They protect your access to alternative therapies from ALL health care professionals. Two other states - Louisiana and Nevada - have regulations (not laws) that protect your rights of access to these treatments.

Monica and FAIM are trying to extend this freedom, state by state. We need to help her. Check out her web site and e-mail her with your offer of support. Her e-mail address is:

monica@healthlobby.com

48. Campaign for Better Health

If you are interested in getting involved in a political movement to preserve your right to choose the medical treatment you want, better join this organization. They have a great web site where they have automated the process of communicating with your Congresspersons. You can even personalize their form letter by adding your own words. Just go to:

Someday we will sit down to a banquet of our own consequences.

Robert Louis Stevenson

A HEALTHY DIET

All of us have read about diets. Most of us have tried one or more. Most of them have been unsuccessful in terms of long-term benefit. Why?

Diets are seen as temporary. "I'll get on this diet and lose 20 pounds." Then what? To be healthy forever, you must simply adopt eating habits that are healthy. Nothing else works. If you don't believe me, ask your friends. Ask them to tell you about a diet where they permanently lost xx pounds. Do your own survey.

For now, let's assume that no diet is worth the paper it is written on. Healthy eating habits are what we're talking about.

SEVERAL OPTIONS

We want to eat healthy. Forever. What does that involve? I wish I could give you an easy answer. Let's look at two options.

Dr. Atkins' Diet Revolution

Talk about controversy. Ever since 1972, when he published his first Diet Revolution book, Robert C. Atkins, M.D. has been ridiculed by his peers. All the more reason, as we've seen, to explore his work.

Before his death in early 2003, Dr. Atkins was a practicing M.D. He specialized in cardiology. He treated 60,000 patients after he received his medical degree from Cornell University Medical School in 1955. His books have sold over 10 million copies worldwide.

Dr. Atkins believed that most fat people suffer from hyperinsulinism. That means their bodies are generating too much insulin, which turns sugar into fat. The trigger for the insulin generation in our bodies is carbohydrates.

He said you need to change your body's metabolism so it starts to burn your stored fat. You do this by restricting your consumption of carbohydrates. He obviously had a point. Most dieticians and even M.D's now agree.
In spite of all the fat labeling on foods and our society’s obsession with "low fat" diets, **20 million more people in the U.S. are obese than 10 years ago.** Whatever we’re counting -- calories or fat content -- it isn’t working! Every man and woman is, on the average, **ten pounds heavier**. Look around you. Obesity is hard to hide. For children, the situation is **even worse**. Their obesity rates have **doubled** in the last ten years. Have you heard about the 120-pound three-year-old?

Dr. Atkins said our average **carbohydrate consumption** in those ten years has gone up by **50 grams a day**. He said that among the thousands of patients he had treated for obesity, **90 percent** had a **metabolic** disorder, not an eating disorder.

How often have you heard fat people say "But I just eat small meals and I still gain weight!"? I've heard at least **20 people** tell me that in the **last few years**. All were **grossly overweight**. They were not lying to me. They don't eat a lot. They just eat the **wrong things**.

Let me give you a personal example. When I first read Dr. Atkins' book in 1996, I weighed about **202 pounds**. I'm 6 feet, 1 inch tall. That was down from **229 pounds in 1992**, when I started working out with Dr. Joe Davis at Ultra Fit. I was still too large, by any standard. Today, I weigh **187 pounds** -- the same as when I graduated from flying school in the Air Force in **1953**. I have been at that weight or **within 3 pounds** of it since **1997**. I plan to stay there for life.

What has changed? Mostly, **breakfast**. Counting the carbohydrates I ate for breakfast **astounded** me! I would typically have a bowl of cereal (usually Raisin Bran) with milk and a banana; two slices of toast with butter and jam; coffee with sugar; and a tall glass of orange juice. Healthy breakfast, no?

Was I shocked when I added up the carbs?! For breakfast alone, I was eating **174 grams of carbohydrate**. The maximum anyone can eat and maintain their weight varies between 40 and **75 per day**. Unbelievable? Here's the tally:

<table>
<thead>
<tr>
<th>Item</th>
<th>Grams</th>
</tr>
</thead>
<tbody>
<tr>
<td>Raisin Bran cereal</td>
<td>41</td>
</tr>
<tr>
<td>Milk (1% fat)</td>
<td>12</td>
</tr>
<tr>
<td>Banana (1 medium)</td>
<td>26</td>
</tr>
<tr>
<td>Bread (white-2 sl.)</td>
<td>28</td>
</tr>
<tr>
<td>Butter (1 pat)</td>
<td>0.1</td>
</tr>
<tr>
<td>Jam</td>
<td>26</td>
</tr>
<tr>
<td>Sugar (in coffee)</td>
<td>12</td>
</tr>
<tr>
<td>O.J. (8 oz.)</td>
<td>29</td>
</tr>
<tr>
<td><strong>Grand Total</strong></td>
<td><strong>174</strong></td>
</tr>
</tbody>
</table>

---

Cancer-Free – Your Guide to Gentle, Non-toxic Healing 185
With all the other stuff -- steaks, rice, pasta, pies, ice cream, etc. -- I was eating, it's **a wonder I didn't weigh 300 pounds**.

What did I do? Well, the only drastic change I made was to **change my breakfast** to the following:

- Turkey bacon (2 sl.) 0.2 grams
- Eggs (2 large-scrambled) 0.2 grams
- Coffee 0 grams
- Stevia (1 pk) 1 gram
- **Grand Total** 1.4 grams

Did I lose a lot of weight in a hurry? You better believe it!! About **15 pounds** in **three weeks**. Now, I eat a slice of bread (11 grams) with butter (0.1 gram) and put honey (18 grams) in my coffee. So, I'm up to **30 or so grams** for breakfast. But the rest of the day, I eat **mostly protein** (broiled chicken, fish, etc.), a vegetable and salad. At night, I eat a **very light snack**. My weight has stayed within 3 pounds of 187 ever since.

The important part about this set of "eating habits" is that I **never feel hungry**. Do I stray sometimes? You bet. **I'm human**. But as soon as I see myself start gaining a couple of pounds, I go right back to **watching my carbohydrate intake** closely.

My wife, Terry, is from Spain. She loves to make Spanish **paella** -- a **rice dish** with lots of seafood. Occasionally, we celebrate some **special day** with cake, wine, etc. We have parties where we serve **all kinds of food**. We eat out about once a week.

I'm not talking about a **monastic, sterile life style**. All I feel I have done is **gained control** over my weight -- and my life. Of course, part of this -- the part I started in 1992 -- is a **regular workout schedule**. We'll cover that in the booklet on Exercise.

Meanwhile, here are a few of the **common foods** in the typical American diet and their **grams** of carbohydrates:

- Banana Split 91.0
- Burrito, bean 48.0
- Cheeseburger (1/4 pounder) 33.0
- Corn bread stuffing (1/4 Cup) 69.0
- Hot dog with bun 24.0
- Onion rings (fast food order) 33.0
- Shake (medium) 90.0
Here's one of the testimonials on Dr. Atkins' diet. It comes from Maura Blackburn in New York:

"Our success is almost too good to be true. People don't recognize us. Sometimes it is even hard to believe it myself. My husband lost 85 lbs. He went from a size 42 waist to a 30 waist. I lost 75 lbs. I went from a size 18 to a size 4. We both feel great. Most of all, I no longer suffer from bursitis and my asthma is much better. My husband's cholesterol and blood pressure are now within normal limits. We constantly recommend your diet and will live by it for the rest of our lives."

Eat Right 4 Your Type

Another book on diet that we found fascinating is *Eat Right 4 Your Type* by Dr. Peter J. D'Adamo with Catherine Whitney, copyright 1996 published by G. P. Putnam's Sons of New York. This book has been on the NY Times bestseller list. It has sold over a million copies in hardback and been translated into 40 languages.

Dr. D'Adamo is a naturopathic physician, as was his father. In 1980, his father, Dr. James D'Adamo published his book *One Man's Food*. It was based on 23 years of research and experimentation with his patients. He had discovered that certain blood types -- A, B, O and AB -- correlated to better health with certain types of diets.

For example, Type A people, like me, thrived on vegetarian diets, including vegetable proteins like soy and tofu. They developed copious amounts of mucous discharge in the sinuses when they ate dairy products. Type O people, like my wife and daughter, did better on animal proteins.

Peter D'Adamo picked up his father's work and continued the study using more scientific methods starting in 1982. For example, he used blood samples from Type A, B, O and AB people. He challenged the samples with hundreds of different foods and recorded the reaction. His book is based on these studies.

What he discovered is that agglutination, the body's reaction to a foreign substance, occurred when certain foods met certain blood types. A food that may be beneficial to a certain blood type may be harmful to others.
He has taught his conclusions to many other doctors. All say their patients are getting good results with the guidelines.

Here is the essence of his theory:

- Your blood type -- O, A, B, or AB -- is a powerful genetic fingerprint that identifies you as surely as your DNA.
- When you use the individualized characteristics of your blood type as a guidepost for eating and living, you will be healthier, you will naturally reach your ideal weight, and you will slow the process of aging.
- Your blood type is a more reliable measure of your identity than race, culture or geography. It is a genetic blueprint for who you are, a guide to how you can live most healthfully.
- The key to the significance of blood type can be found in the story of human evolution: Type O is the oldest; Type A evolved with agrarian society; Type B emerged as humans migrated north into colder, harsher territories; and Type AB was a thoroughly modern adaptation, a result of the intermingling of disparate groups. This evolutionary story relates directly to the dietary needs of each blood type today.

Dr. D'Adamo summarizes it as follows:

"I realize that this is probably a completely new idea for you. Few people ever even think about the implications of their blood type, even though it is a powerful genetic force. You may be reluctant to wade into such unfamiliar territory, even if the scientific arguments seem convincing. I ask you to do only three things: Talk to your physician before you begin, find out your blood type if you don't already know it, and try your Blood Type Diet for at least two weeks. Most of my patients experience some results within that time period -- increased energy, weight loss, a lessening of digestive complaints, and improvement of chronic problems such as asthma, headaches, and heartburn. Give your Blood Type Diet a chance to bring you the benefits I've seen it bring to the more than four thousand people I've put on the diet. See for yourself that blood not only provides your body's most vital nourishment, but now proves itself a vehicle for your future well-being."

Blood Type Diet

In his book, Dr. D'Adamo lists hundreds of foods for each blood type. They are grouped into categories called "Highly Beneficial", "Neutral" and "Avoid." For example, for me, a Type A, the Seafood category looks like this:

Highly Beneficial
Cancer-Free

Carp, Cod, Grouper, Mackerel, Monkfish, Pickerel, Red Snapper, Rainbow Trout, Salmon, Sardine, Sea Trout, Silver Perch, Snail, Whitefish, Yellow Perch

**Neutral**
Abalone, Albacore (Tuna), Mahi-mahi, Ocean perch, Pike, Porgy, Sailfish, Sea Bass, Shark, Smelt, Snapper, Sturgeon, Swordfish, Weakfish, White Perch, Yellowtail.

**Avoid**
Anchovy, Barracuda, Beluga, Bluefish, Bluegill Bass, Catfish, Caviar, Clam, Conch, Crab, Crayfish, Eel, Flounder, Frog, Gray Sole, Haddock, Hake, Halibut, Herring (fresh), Herring (pickled), Lobster, Lox (smoked salmon), Mussels, Octopus, Oysters, Scallop, Shad, Shrimp, Sole, Squid (calamari), Striped Bass, Tilefish, Turtle

Other categories of foods include Meats, Eggs and Dairy, Nuts and Seeds, Beans and Legumes, Cereals, Breads and Muffins, Grains and Pasta, Vegetables, Fruit, Juices and Fluids, Spices, Condiments, Herbal Teas, Miscellaneous Beverages and Vitamins and Supplements.

**Does It Work?**

Terry and I decided to give his ideas a try. **We carefully avoided** the foods in the "Avoid" category. **We made a point of eating as much** of the "Highly Beneficial" foods **as possible.** We kept it up **religiously** for three weeks.

The results were quite **dramatic.** Terry's chronic **gastritis disappeared.** She could not remember a period in her adult life when she had not suffered from this ailment. It caused her enough **pain,** we had talked to two doctors about it, and had her stomach examined with a "**swallowed camera**" device, all with **negative results.**

I, too, found the diet completely **freed me from gas.** More importantly, I felt a definite **increase in energy.**

We were so impressed that I went into this book and made up on the word processor a **one-page list** of the "Green Light" and "Red Light" foods for Type A (me) and Type O (Terry and our daughter). I picked from Dr. D'Adamo's list only those **foods we commonly ate.** I ignored the "Neutral" category. This was all done in an attempt to **summarize** so the list could be **posted** on our refrigerator door.

Some examples of changes we made: **we have all avoided** Catfish, which we ate frequently before; **we avoid** eating any kind of **white and wheat flour;** I eat...
peanuts ("Highly Beneficial" for Type A); Terry and Katie avoid them ("Avoid" for Type O); Terry avoids coffee; I avoid beer; I avoid Beta Carotene supplement; Terry avoids Vitamin E supplement.

We eat Ezekiel Bread, a flourless bread, which is high in protein. We get it at the health food store. But, be careful. It is high in protein, but also high in carbohydrates.

Having the list on the refrigerator has proven the only practical way to use these recommendations in our daily eating. There is no way to memorize the long lists from the book.

Dr. D'Adamo has a very complete web site. It is at: http://www.dadamo.com/ Included are a discussion forum, Dr D'Adamo's answers to critics, Frequently Asked Questions (FAQs), and a wide variety of other useful information. His clinic with address and phone number is also listed.

**Blood Type and Cancer**

The final chapter in this book deals with Dr. D'Adamo's research on how Blood Types and cancer interact. He has done extensive research on breast cancer. It shows that Blood Type A and AB are far more susceptible to this disease than Type O and Type B. There is information on other types of cancer. If I had cancer, I would study this book carefully. It seems that your eating and taking the proper supplements during the treatment can substantially increase your odds of conquering the cancer.

If you have any trouble with gastritis, bloating or whatever, you need this book. If you want to feel more energetic, you need this book. And, certainly, if you have cancer, you need this book. Don't knock it until you've tried it.
In Summary

Healthy eating habits are essential to good health. Diet definitely causes many degenerative diseases, such as diabetes, high blood pressure, heart disease, osteoporosis, gout and macular degeneration. Most M.D.s are not qualified to advise you on healthy eating habits...even if they had the time.

You must take control of your eating if you want to live a long and healthy life. It is never too late. Do it today!!

A HEALTHY MIND

Recent discoveries prove the thesis that there is a real "mind-body connection." We will discuss these below. Deepak Chopra, M.D. was the first author to make this connection clear to me.

Meet Dr. Chopra

Dr. Chopra has now written 25 books that have been translated into 35 languages. He has produced over 100 audio and videotape series. In 1999, Time magazine selected Dr. Chopra as one of the "Top 100 Icons and Heroes of the Century."

I first encountered Dr. Chopra in his book called Creating Health in 1990 or so. Shortly after reading that book, my wife, Marge and I ordered a set of audiotapes he made called Ageless Body, Timeless Mind. I have found him to be an excellent source for wisdom on the interconnections between physical, mental, emotional and spiritual health.

I cannot improve on his words, so I will quote them from his book Creating Health:

"How to Be Perfectly Healthy and Feel Ever Youthful
HEALTH IS OUR NATURAL STATE. The World Health Organization has defined it as something more than the absence of disease or infirmity -- health is the state of perfect physical, mental, and social well-being. To this may be added spiritual well-being, a zest for life, a sense of fulfillment, and an awareness of harmony with the universe around him. It is a state in which one feels ever youthful, ever buoyant, and ever happy. Such a state is not only desirable but also quite possible. And it is not only quite possible, it is easy to obtain."

As an experienced medical doctor, Chopra saw the limitations of "conventional" medicine. The certainty of the connection between emotions, attitudes, spiritual
awareness and physical health arose from his clinical practice. This "epiphany" of the "mind-body connection" occurred to him about 20 years ago...in the mid '80s. He has devoted his life since then to bringing this message to people using all forms of media.

To understand and appreciate his message, you really need to read one or more of his early works. All available from amazon.com, they include:

Creating Health -- How to Wake Up the Body's Intelligence, originally published in 1987, most recent revision in September 1995.

Quantum Healing -- Exploring the Frontiers of Mind/Body Medicine, originally published in August 1991,

Because his work covers a complete view of the universe and everything in it, it is presumptuous to quote excerpts. Let me instead quote a "blurb" from the jacket of Creating Health. Hopefully, this will pique your interest to get at least this one book and enjoy it.

"Creating Health was a breakthrough book -- the first in which Deepak Chopra created a new understanding of health and illness and the healing power of the mind.

Dr. Chopra is considered the preeminent spokesman for the six-thousand-year-old tradition of health care from India -- Ayurveda. In this book he blends Eastern and Western medical philosophy for a clearer, richer view of the road to perfect health, a balance between mind, body, and spirit.

An endocrinologist, Dr. Chopra has practiced in the Boston area since 1971 and is former chief of staff of New England Memorial Hospital in Stoneham, Massachusetts. He is now medical director of the Maharishi Ayurveda Health Center for Stress Management and Behavioral Medicine in Lancaster, Massachusetts."

Scientific Proof

In just the last few years, researchers in a variety of fields have concluded that the ideas expressed by Dr. Chopra do, in fact, conform to the scientific evidence. The best book I have seen on this subject is called The Balance Within -- The Science Connecting Health and Emotions, by Esther M. Sternburg, M.D.
Published in 2000, this book states unequivocally that stress does affect the immune system. The medical “establishment” ridiculed this simple statement only a few years ago.

Dr. Sternburg describes her work as follows:

"The science of brain-immune system communications is by its very nature a field that does this [shows how one field of specialization can be applied to others to reweave the tapestry of the human body]. It looks inward to the most detailed level of body chemistry and at the same time it looks outward to the larger concerns of health and emotion. It applies technologies that analyze molecules and genes with technologies that image the functioning of whole organs like the brain. It bridges specialized disciplines of basic science like immunology and neurobiology, and it bridges specialized fields of medicine such as psychiatry and rheumatology. It bridges the basic sciences with clinical medicine and both of these with the intangible but essential input of feeling and emotion. The end result is to make the body and mind whole again."

Specifically, immune system molecules can and do cross the "blood-brain barrier," previously thought to be impermeable, like the Great Wall of China. The result is that the cytokines (a particular kind of immune system molecule) do, in fact, kill off neurons in the brain and contribute to the slow loss of memory seen in dementia victims -- e. g. Alzheimer's disease, AIDS, senility, etc.

This means that weakened immune systems lead directly to degenerative brain disorders. Possibly quite soon, this knowledge will lead to breakthroughs in the treatment of these diseases.

On the other hand, this science is finding that "believing can make you well." Examples that all physicians have seen, such as "I'll fight this cancer one more month until my grandchild is born," have a scientific basis. The body's nerve and hormone responses to stimuli, which are controlled by the brain, do, in fact, directly affect our immune system.

Work can be a positive or negative experience. Conditioning can occur in either direction. If the environment is nurturing, supportive and rewarding, the stress associated with work becomes a positive stimulus. If the workplace is hostile and unsupportive, it can literally make us sick from the stress. Studies in a variety of disciplines prove this -- endocrinology, biochemistry, immunology, and psychology. Dr. Sternburg has documented them all in very convincing fashion. The bibliography at the end of her book documents hundreds of studies covering 14 pages.
We have all experienced this. It is intuitive. Any positive or negative emotion affects our immune system cells. Psychologists have proven again and again that negative stress leads directly to increased vulnerability to viral infections. Grief, for example, and the stress endured by caregivers of Alzheimer's and other terminal patients, correlate with reduced immune system function.

As Dr. Sternburg states, it was probably necessary to go through the period of increasing specialization from Descartes and Bacon until the 1960's or so. Now, however, each scientific discipline is so overwhelmed with detail that focus on the parts has caused us to lose sight of the whole. In health, just now, the disciplines are beginning to come together to arrive at a "unified theory," as sought in physics to explain the universe. We are not there yet, but this theory definitely includes an interaction between the emotions and the immune system.

Applying This Knowledge

So what, you say? What's in it for me? What should I do differently? Good questions, all.

There are at least four major changes you need to make in your life once you have acquired this knowledge:

- Change your work environment, if possible, to one that is positive. Easier said than done? Sure. But today there is infinitely more flexibility on when and where work gets done than before the Internet. Get creative about what you do and where you do it. Work at home as an affiliate to one or more web site promotions. Telecommute, if your work allows it. Change the texture of your day with breaks for workouts, meditation or just relaxing.

- If you are well, enhance your immune system with positive interactions with other people and the joy of creation. Join support groups. Volunteer at local hospice organizations or hospitals. Get started in hobbies that produce positive feedback -- painting, writing, golf, tennis, singing, etc.

- If you are sick, boost your immune system and take a healthy dose of vitamin, mineral and amino acid supplements. Eat a healthy diet low in carbohydrates.

- Build up to 30 to 60 minutes of exercise at least 4 days a week. It is proven that regular exercise produces a flood of positive feelings about
you yourself as well as building up your stamina and immune system. See the booklet on Exercise for some specific suggestions.

The Result

Once you have reached a positive mental and physical state, you'll know it. How? Well, here are some measurements for both your physical condition and your body that will help you tell when you're "there."

You will know that your body has reached its proper condition when:

- You can walk two miles in less than twenty-four minutes, and still maintain a conversation at the end of your walk.
- You do not smoke. You limit your alcohol to no more than one and a half ounces of whiskey or six ounces of wine per day.
- You fall asleep readily at night. You get an average of seven to seven and a half hours of sleep each night.
- Your weight falls within 5 percent of your ideal body weight. These tables are available at any gym or health food store.
- Your percent body fat falls in the right range. If you are a man, your percent body fat is 8 to 12 percent. If you are a woman, you have 15 to 18 percent body fat. [Any gym can measure your body's fat percentage for you.]

You will know that your mental attitude is healthy when:

- You are doing exactly what you want to do in life and feel generally happy.
- You wake up each morning feeling great, not just good.
- You take regular vacations.
- You realize you are part of a large mutual support system and regularly offer your support to your family, friends and colleagues.
- You are committed to the basic value of life and see it as worth living.
- You believe you have a mission in life, that your mission fits into a purpose that connects with the family of man in a larger universe.
You have a sense of humor. You can laugh at yourself when you find you take yourself too seriously.

Other clues that help you know you're healthy:

- You have taken charge of your health. You realize that, like illness, excellent health is a composite, made up of many different components. You recognize that you are responsible for those components.

- You have worked to make your immune system an ally. It is finely tuned, ready and able to battle infectious agents of all types, seeking out and destroying abnormal cells that could lead to allergies, arthritis, diabetes or even cancer.

- You not only meet the average stresses of daily life head-on, you seek out challenges of your own. Even your vacations become physical challenges.

You have become an informed consumer. You carefully read the labels on all the food you eat and understand what those labels mean. You co-doctor intelligently, seeking knowledge on your own to help you get and stay healthy.

To Your Health!!
HEALTHY EXERCISE

What Ever Happened to Jim Fixx?

I'm sure there were lots of you who, as I did, wondered how a great runner and advocate of running for health purposes could drop dead with a heart attack as Jim Fixx did in 1984. Many of you are saying, "Who's Jim Fixx?"

I mention him only because he exemplifies the truism that physical fitness isn't everything. Jim Fixx was born in 1932, just like me. He published a book in 1977 called "The Complete Book of Running." He is credited with starting America's fitness revolution. Yet, he died in 1984 at age 52 practicing the sport he was an expert in. He had heart arteries clogged with atherosclerosis.

So what? Well, healthy exercise is no guarantee of either a long or a healthy life. So, can you couch potatoes relax? No way!!

Healthy exercise is an essential part of your get and stay well lifestyle. It is not just good for you. It is essential. However, it must be combined with healthy eating habits, which are also essential.

What is healthy exercise? That is the question I'm going to answer in this booklet. First, I do not recommend running or jogging. Why? It is hard to get someone to gauge your progress, particularly at first, and make sure you don't overdo it. Also, it is notoriously hard on knees, ankles and feet ... not just of us seniors, but of everyone.

A Step-by-Step Approach

STEP ONE: Get a membership in a gymnasium. Two reasons. Every good gym has people to supervise your initial attempts to regain your fitness. And second, once you begin paying for something like a gym membership, it's a powerful incentive to continue to use it. The typical price is $35 - $40 a month.

This is not your father's gym. In fact, the "politically correct" name for a gym nowadays is "health club" or "fitness center." I'll continue to use "gym", thank you.

If you haven't been in a gym for a while, go take a look. You will be pleasantly surprised. A good gym is attractive, airy and air-conditioned. You do not feel
like it's just a sweatshop for muscle builders. The facilities are modern, quiet and computerized. There are TVs available to watch while you're doing your treadmill or bicycle aerobics. Some rent headsets to listen to the TV. Or, you can take your own earphone radio, as I do.

Most gym memberships involve a contract for some period of time. Typical is two years. These people aren't dummies. They know, as Dr. Joe Davis told me when I first joined his Ultra Fit gym, that once you exercise regularly for three months, you're hooked. You feel and look so good that you will continue it and give it priority.

The gym Terry and I exercise in has members of all ages. Many of the people we see there are older than I am. A few of these seniors are in better shape than me. We have made friends there. It is a social experience we share. When someone hasn't been there for a week or two, we get concerned about them and vice versa.

Ideally, you join with a friend or loved one. You keep each other honest. But don't count on that. Your friend or loved one may not be as motivated as you are. Plan to do it yourself. Take your friend or loved one, if you can, but don't wait for that. We're talking about your life here.

**STEP TWO:** Line up a trainer at the gym. If they don't have qualified trainers, look for a gym that does. Check this on the phone. Gyms are competitive, just like other businesses. Make them prove the value of their membership to you.

The gym may provide you a trainer for your first couple of workouts as part of the sign-up agreement. If not, the trainer will typically charge $20 per hour. You will need one for only the first two weeks. Plan on spending $100 on the trainer.

During that time, the trainer will do an assessment of your fitness level, muscle measurements and fat percentage. They will outline a program for you to start a comprehensive exercise routine. They will check you out on the weight machines -- another prerequisite. They will calculate for you a maximum heart rate to use as you begin using the aerobic machines. And, most important, they will monitor your first few workouts to make sure you are doing them correctly.

I will give you some general guidelines here. But there is no substitute for a trainer to get you familiar with all the exercise options to improve your fitness level. The trainer will show you how to start slowly enough so there is no muscle pain. No pain, no gain...NOT!! Your routine should include a mixture of weight exercises (circuit weights), aerobics (treadmill, bicycle, step climber, etc.) and stretching.
The gym should offer **periodic assessments** -- fitness level, muscle measurements, fat percentage measurement and recommended exercises -- **free**. Another **prerequisite**. Don’t sign up without it.

**STEP THREE:** Join an aerobics class. This **jump-starts** the social aspect of going to the gym, which is **very important**. You need this to be a **pleasant experience**. You need the support of a group.

Any gym you join should have a **wide variety** of aerobics, Tae Kwan Do, jazzercise, yoga, etc. classes for you to choose from. One popular option involves using a large rubber ball to lie on in various positions to **stretch** your muscles. This absolutely needs to be done **with supervision** when you’re starting.

**STEP FOUR:** Just do it!!

**Can't I Do It At Home?**

Sure you can. But **you won't**. Those fancy exercise machines you see on TV are useful only if you want another "**white elephant**." We have one in the storage closet. Take it from a **champion procrastinator**. Without the social and financial pressure of a **gym membership**, you will **not** exercise systematically and regularly.

In **1961**, the U. S. Air Force adopted a **British system of aerobic exercise** as its official fitness routine for all members. We were to do it **on our own, at home**. Did we do it? Sure. **Some of us. Some of the time.**

In **1967**, I heard a lecture at Randolph Air Force Base in San Antonio by **Dr. Kenneth Cooper**. At that time, he was a Captain in the Air Force. He has since become **famous** for his fitness clinic in Dallas, where he works with seriously ill people, particularly those with **heart problems**.

The Air Force adopted Dr. Cooper’s program as its **official exercise routine** for all members. We were to do it **on our own, at home**. Did we do it? Sure. **Some of us. Some of the time.**

Believe me, this is one rut that I've fallen in enough times that you can **use my experience to avoid it**. Isn't that what we all hope **our kids** will do? Do they do it? **Some of them. Some of the time....**
Well, you get the idea. Get started on a supervised routine of exercise now. Whatever age you are. However much money or time you have or don't have. It's the only way that works long-term.

What Specifically Does a Good Workout Routine Look Like?

Let me describe mine for you. I do this 3 or 4 times a week. Remember, I built up to this level over a period of about two years. At first, I did a very modest version of this. I was 60 at the time, in 1992.

My experience before this with regular gym workouts was limited to my Air Force days and a few months when I was in my mid-50s. At that time, I did not have any social support and the gym environment wasn't friendly and I quit.

My workout takes about an hour and breaks down into four parts:

1. Warm-up. I ride the stationary bike for five minutes. It has various levels of pedal resistance. I use one that gets my pulse up to about 120 beats per minute and loosens up my muscles.

2. Circuit Weights. These are computerized weight machines -- 12 of them. When I come in, I punch in my member number at the central computer. Then, when I get to each machine, I punch the number in again and it "remembers" how much weight I used in my last workout.

This is the major advantage of computerized circuit weight machines. You don't have to remember where you were last time. It also automatically adds a certain percentage (varies by machine) to your weight for the negative (back to GO) stroke. The first three and last three repetitions are at a lower weight, to get you started and ease you back to normal at the end (nice, but not essential).

Also, at anytime, you can get a printout of your history of workouts -- first workout, best workout, most recent workout, etc. with the weights for each. I do 2 sets of 12 repetitions each on each of the 12 circuit weight machines. Here is my latest workout:

</tbody>
</table>
They can be done on the carpeted floor anywhere in the house or a hotel room. They require no equipment. Try them; you'll like them!

**Partial Sit-ups ("crunches").** Lie on the floor (mat) on your back with your feet flat on the floor (knees raised). With your hands on opposite shoulders (right on left, left on right), raise your head and shoulders a few inches off the mat. Return to the start position. I do 30 - 35 of these. You should start with no more than 10. Increase at the rate of 5 more per week. In time, you can begin lifting your shoulders higher off the mat, but never to a full sit-up position.

**Oblique Sit-ups.** The oblique muscles are very important in toning up your abdominal muscles (which erase back pain). They run vertically down the outside of your abdomen, on both sides.

First, from the same start position as for the Partial Sit-ups above, place your right ankle on your left knee. Place your left hand behind your head. Keep your right hand flat on the mat. Raise your left elbow to touch your right knee. Again, start with 10 repetitions. Reverse positions and raise
your right elbow to touch your left knee. Add no more than 5 repetitions per week. As you gain muscle tone, you can make the exercise a little harder by placing your calf and finally your knee on the other knee instead of your ankle. I do 30-35 of these with my knee on my other knee.

**Leg Lifts.** From the same start position as the Sit-ups, raise your legs (with knees bent) toward your chest. At the highest position, be sure your butt is off the mat and your feet are together. Slowly lower your legs until they are 10 inches or so off the mat and then raise them again. Do only 3 or 4 of these to start. Add one per week. I do 20 of these.

**Legs to Chest.** Finally, an exercise that a Physical Therapist showed me 15 years ago. She said that if I did 25 of these every day, I would never again have back problems. **She was right.**

Begin in the same position as for the Sit-ups. Raise both legs together (with knees bent) until they are as close to your chest as possible. Grasp them with both arms and hold for a six second count. Lower them to the floor and repeat the exercise. Do no more than 8 of these to begin. Add 1 or 2 per week. I do 35 of these.

When you get up from the mat, be cautious. It is common to be dizzy at first as your circulation readjusts to the vertical position. Sit down with your head between your knees for a couple of minutes until the dizziness goes away.

**4. Aerobic Exercise.** So far, except for the warm-up, the exercises have been designed to strengthen and-or stretch your muscles. Essential to your fitness routine is a session of aerobic exercise. Most experts say that for optimum gain, you need to elevate your heart rate to 80 percent of your maximum and keep it there for at least 20 minutes. Do this at least 3 times a week.

What is your maximum heart rate? You and your trainer will figure that out at the first session. There is a standardized table based on your age. But, like the standardized weight tables, there is a lot of variation based on blood pressure, heart condition, level of fitness and other variables. Don’t try this at home!!

For the aerobic part of my workout, which if you insist on ranking them, is probably the most important, I use the treadmill. It is the most popular of the aerobic machines at the gym I go to. Probably, that is because of the wide variation of routines available (and the convenience of their location in front of the bank of TV screens).
I use a **heart rate option** on the computerized machines at my gym. That means you can **set the maximum heart rate** you and your trainer have figured out. You also enter your body weight, the speed you want and the number of minutes for your workout. The machine then **figures out the elevation** of the treadmill necessary to produce that heart rate for you.

It **continually monitors** your heart rate through a set of handles that you grasp during the workout. When your heart rate has reached your desired maximum, the machine **automatically** adjusts the elevation to keep it there. If it has lowered it to level (zero degrees of elevation) and your actual heart rate is **too high**, it will tell you to **reduce your speed** (from 4.0 to 3.5 miles per hour, for example) so the maximum heart rate can be maintained.

Also included on the treadmill (and the bicycle and stair climber) is a "**fitness test**." This will put you through a five minute drill using varying elevations and give you a **readout** on how you did (poor, average, good or excellent) based on your heart rate.

At the end of your workout, the machine will go through a one-minute "cool down" period at reduced speed and elevation designed to **gradually** get your heart rate back to normal.

I do **22 minutes 3 or 4 times a week** with the maximum heart rate set at **125 beats per minute**. That is the "standard" maximum for a person 47 years old. One of the trainers recommended that level after a fitness test.

**Summary**

The routine I have described above takes me **almost exactly one hour**. I try to do it in the morning, but you can do it **anytime**. Most modern gyms are open 24/7. The level I’ve reached **required about two years** of gradual buildup. Since then (1994), I have remained at a "**maintenance**" level of fitness.

You can certainly do as well or better than I did. **Challenge yourself**. But, above all, don't **get in a hurry** to reach some particular level of fitness. This is a **lifelong highway**. There will be signposts along the way, but you will continue traveling down it **as long as you live**.

Because of it, you will live longer. Dr. Roizen’s book, *Real Age*, estimates that my level of exercise adds three years to my life or reduces my "Real Age", in his terms, by three years. More important than that, I **feel great**.
I play **golf twice a week**. When the temperature is below 90 degrees (about 7 months of the year here in San Antonio, I **walk** the 18 holes). When it is hotter than that, I play, but I ride a cart. I have **no muscle or joint pain**.

I feel full of energy and stamina every morning. At least once, sometimes twice, a week I stand on the "risers" and **sing with a men's chorus for 2 1/2 to 3 hours**. I play bridge on the computer with people from all over the world.

I enjoy **vacations** with my family about three times a year, plus weekend excursions. I am happier than ever before in my life (thanks largely to Terry, my beautiful wife) and I feel much **younger than I did 40 years ago**.

**GENERAL GUIDELINES ABOUT EXERCISE**

Here are several general guidelines for you to keep in mind when you exercise. Your **trainer** may give you more.

1. **Breathe out** during the **positive** stroke of each exercise. That is, take a breath just before you start. For the weight machines, it is **obvious** what the positive stroke is. It's the **first thing you do** during each repetition, whether it's the Fly, the Seated Row or whatever. **Do not hold your breath.** This will avoid herniating a muscle in your abdomen. Breathing in will occur normally on the negative stroke. To **avoid hyperventilation**, purse your lips as you breathe out. This will slow it down.

On the floor exercises (partial sit-ups, etc.), the positive stroke is also the first thing you do during each repetition. As you lift your head and shoulders, for example, you should be **breathing out**.

During the aerobics portion of your routine, it is a good idea to adopt a **rhythmic breathing pattern**. For example, breathe in for four steps on the treadmill, and breathe out for six steps. This will help build up the **oxygen carrying capacity** of your lungs.

2. Perform the exercises **slowly**. **Don't** try to show off as the "macho man/Superwoman" and do each repetition as fast as you can. You get **much more effect** from the same number of repetitions if you do them slowly.

3. **Accent the Negative.** Experts say the negative stroke in each exercise contributes 80% of the value of that exercise. This is not intuitive. This is why the computerized weight machines add a **percentage more weight** during the negative stroke. In addition, you should consciously take longer
to do this negative stroke than the positive stroke. If you do the positive in a count of two, do the negative in a count of four.

4. Increase the weight until you feel you can just barely complete the last repetition on that machine. Exception: if you feel pain, stop! It's quite simple to increase the weight on the computerized circuit weight machines. The idea is to continue stressing your muscles as they develop strength and stamina.

For the floor exercises, the same principle applies. At the end of each set, you should feel like you could not possibly do another repetition.

5. Keep your muscles stressed all the time during your exercises. In other words, don't relax between repetitions. The idea is to tone up your muscles as quickly as possible without pain. That occurs when you maintain the stress on your muscle between repetitions.

6. If you miss a week or so (because of illness or whatever), assume that your progress has been set back three weeks. When you start again, try to go back to where you were three weeks before. If you miss three weeks or more, assume you are starting over from scratch.

NOTE: As you pursue the routines of diet and exercise in this book, you will be pleasantly surprised that the colds, flu and other common maladies you have been used to quietly disappear from your life.

7. Anytime you feel pain of any kind, STOP. No well-planned and executed exercise routine should be painful. The pain is warning you that you are overdoing whatever you are doing. Stop. Take a rest and try it again at a lower stress/weight level. If the pain persists, bypass that exercise completely for a few days until you can perform it without pain.

NOTE: It is a good idea to weigh yourself every time you go to the gym. Just remember, muscle weighs more than fat. If you are not losing weight as fast as you like, it could be because your muscles are "bulking up." This is also a great excuse when you don't lose a pound or so a week!

Best of luck, and remember...Just do it!
DIABETES

Do you know someone who suffers from diabetes? Do you suffer from it? For most of us, it's one or the other.

A recent article by Erin McClam, distributed by Associated Press and published in the San Antonio Express-News pointed out that diabetes increased at an alarming rate in the United States during the past decade. It has risen 70 percent among people in their 30s. Nationally, the share of the population diagnosed with diabetes jumped 33 percent between 1990 and 1998.

What's even more frightening is that a recent study published by the UK Prospective Diabetes Study suggests that before most patients are actually diagnosed with Type II diabetes (also called "adult-onset diabetes"), the pancreas has lost its ability to properly control post-meal blood sugar levels for over 8 years and insulin resistance has been present for up to 12 years.

Until recently, the earliest Type II diabetes was seen in those in their 40s or older. That has changed dramatically. In the last few years, an alarming number of children have been diagnosed with Type II diabetes. Type II is appearing more frequently in pre-pubescent children, and has even been documented in children as young as four years old (American Diabetes Foundation).

The cause? Very simple. Obesity. The nation's weight problem is well documented. The number of Americans considered obese soared from about one in eight in 1991 to nearly one in five in 1998.

Some 16 million Americans have the disease, and the number is expected to rise to 22 million by 2025. And remember, this is counting only those who have been diagnosed with diabetes...not the millions who have it but are unaware of it.

According to the American Diabetic Association, almost 25 percent of Mexican-Americans between the ages of 45 and 74 have diabetes. In San Antonio, where I live, local health officials say 120,000 residents either have diabetes or are at risk of developing the disease. From 35 years of personal observation of San Antonians, it is increasingly hard for me to find an adult Mexican-American (62% of our population in San Antonio) who is not obese.
The Cause -- Details

Let's take a more detailed look at why you or your loved one has diabetes. I cannot improve on the explanation published by Dr. David Williams (remember him?) in his newsletter Alternatives in August 2000. This newsletter with a long article titled "Sugar is Slow Suicide" is available at his web site: http://www.DrDavidWilliams.com

"For decades 'health nuts,' including yours truly, have been warning about the dangers of increased sugars and/or refined carbohydrates in the diet.

What are "refined carbohydrates?" Any "packaged" food containing carbohydrates -- canned soup; packaged spaghetti, noodle, rice dishes; canned fruit; snack food (all kinds), and so on and on.

Let me tell you, it has been a real uphill battle trying to convince the public that consuming too much sugar could eventually lead to diabetes -- especially when conventional medicine kept asserting that sugar is totally harmless. Even today, as diabetes reaches epidemic proportions in this country, most doctors continue to preach that dietary sugar has no connection to behavior problems, mood swings, depression, or the increased incidence of adult onset diabetes.

Remember what I said up there about biases? Why do you think our medical system doesn't tell us the truth about sugar? Could we be seeing the results of the big money of the food industry in our political system again? Just wondering...

Our FDA says that the only problem sugar causes is dental caries. And with the support of the American Dietetic Association, the Sugar Association has stuck to the position that at only 15 calories per teaspoon, sugar is a healthy, low-calorie sweetener that is no different than any other carbohydrate. Nothing could be further from the truth. In fact, decades of research support the fact that a 'sweet tooth' will invariably lead to a lifetime of poor health and a premature death.

The carbohydrates we eat are converted by the body into a simple sugar called glucose. This glucose, or 'blood sugar,' enters the blood stream to be transported throughout the body. Blood sugar is the primary energy source used by the brain, the nervous system, and the muscles. To be utilized, the blood sugar must get from the bloodstream into the nerve and muscle cells. This is where insulin comes into the picture. As I'm sure many of you recall from high school biology, insulin is the pancreatic hormone that opens up the cell walls so blood sugar can enter. It is the key to the whole energy process.
Insulin is secreted in two phases. A surge of insulin is initially released immediately following a meal, or when sugar or sweetness is detected in the mouth and digestive system. A second round of insulin is released shortly after a meal and continues to be released gradually for several hours.

For insulin to work properly, it must be present in sufficient quantities, and the cells in your body must be 'sensitive' to its effects. When cells don't react to the effects of insulin by allowing sugar to enter through their cell walls, a condition called insulin resistance exists. Insulin resistance isn't fully understood at this point. However, we do know that insulin resistance is often directly related to obesity. This is especially true when a person has a fat build-up in the waist or abdominal area.

Studies have shown that obese, non-diabetic individuals can reduce their levels of circulating insulin simply by losing weight. This reduction in the amount of insulin occurs without any changes in blood sugar levels. In other words, by losing weight, one can often overcome insulin resistance. This is true because, with less fat to complicate the picture, existing insulin levels become more effective at lowering blood sugar levels.

On the flip side of this coin, excess abdominal fat and fat that has been accumulated around the liver increase the amount of circulating free fatty acids in the blood. As these fatty acids break down, they increase toxicity levels. In turn, increased toxicity has been shown to do two things: First, it inhibits the production of insulin; and second, it makes muscle cells less sensitive to the insulin that is available. Muscle tissue is crucial in helping to balance blood sugar levels. Under normal circumstances, over 80 percent of the blood sugar released immediately following a meal is taken up by muscle cells.

I did not begin to pay serious condition to building muscle and losing weight until I was 60 -- in 1992. You say you can't do it. Why not?

A Wrench in the Works

It should be obvious from this simple biology review that the regulation of insulin is a very important part of staying healthy and alive. Unfortunately, an increasing percentage of the American population cannot maintain this balance. And when their insulin and blood sugar regulation capabilities get seriously out of whack, their condition is referred to as diabetes."

Well, so much for the cause of this insidious, silent killer. Let's take a look at how you treat it once you or your loved one have been diagnosed with it.
Treating Diabetes

Dr. Williams gives us some **priceless** advice about what to do about it.

"Most doctors fail to tell their patients that, even if they use the **best** conventional therapies available, type II diabetes will only get **progressively worse**. If your doctor has led you to believe that taking your prescription medication will either **fix your diabetes** or keep it from getting worse, you’ve been **terribly misinformed**. When you look at the current treatment programs, this shouldn’t come as any surprise.

Type II diabetes, which we’re talking about here, is the most common form of diabetes, affecting 90 percent to 95 percent of all diabetics. As we said above, it usually takes 8 to 12 years after the onset of insulin resistance before the diabetes is diagnosed.

The whole idea in treating diabetes is to bring fluctuating blood sugar levels back to normal **as quickly as possible**. This must be done immediately after eating and then **gradually continue** for several hours, as food is being digested. In non-diabetic individuals, this process occurs **very smoothly** because the body constantly **adjusts** its secretion of insulin depending on the levels of blood sugar....

...Using either of these **drug** types [stimulating insulin production; and various newer drug types] is a **shotgun approach** at best. When **too little insulin** is released, blood sugar levels rise, causing the formation of **triglycerides and fat storage**. When there’s **too much insulin**, blood sugar levels begin to fall (hypoglycemia), triggering a **feeling of hunger** and the constant need to eat, which also **causes weight gain and fat storage**.

Doesn’t this sound like drug treatment of diabetes is futile, or even counterproductive. Do you think the drug companies are informing your doctor of this yo-yo effect and the futility of treating it with drugs? Yeah, sure....

...**These problems explain why diabetics treated with oral medications** ... have a **weight gain** of anywhere from **6 to 12 pounds or more**. And, as I explained earlier, this weight gain and the extra deposits of fat become part of the vicious cycle that causes diabetes to **progressively worsen**.

Additionally, the **roller-coaster effect** from constantly fluctuating blood sugar levels contributes to increased blood fats, high blood pressure, increased..."
stickiness of the blood and clot formation, heart failure, poly-cystic ovary disease, nerve pain and degeneration, and damage to the small blood vessels, especially those in the eyes, the kidneys, and the lower limbs.

Before you place complete trust in your medication to take care of your diabetes problem, take a look at this list of complications linked directly to progressing diabetes. It comes from the American Diabetes Foundation.

Diabetes is now:

- the leading cause of blindness in people age 20 to 74
- the leading cause of kidney failure
- the leading cause of amputation of the lower limbs
- responsible for 50 to 60 percent of the impotence problems in males over the age of 50
- responsible for severe nerve damage in 60 to 70 percent of all diabetics
- the major cause of stroke in the United States
- known to increase the risk of heart disease by 2 to 4 times over normal. (In the UKPDS study I mentioned earlier, researchers found that even when intensive efforts were made to control blood sugar levels in diabetics, the risk of developing heart problems was not affected. Diabetics without any previous history of heart attack had the same high heart attack risk as non-diabetics with a previous heart attack.)

Diabetes is one of those diseases that can make the treating doctor look like an absolute genius. After placing a patient on diabetic medication, the doctor can predict with uncanny accuracy the chain of health problems that will begin to develop like clockwork in the upcoming years. Keep in mind, the chain of events will happen even if you comply perfectly with the therapy. In essence, the doctors can predict the progressive decline -- but do nothing to prevent it.

If you or anyone you know has diabetes, this should shock you! Their treatment is not going to help. Expensive brand name prescription drugs like Glucophage and Glyburide do no good.

Many doctors understand this paradox. However, frustrated with their patients unwillingness to change their lifestyle (diet and exercise), they continue to give them the expensive drugs they request.

An Epidemic in the Making

The increasing incidence of diabetes creates a perfect marketing target for pharmaceutical companies. Just look at the facts -- and the trends.
Diabetes is a growing epidemic in this country, with no end in sight. Adult-onset diabetes has increased between 600 percent and 1,000 percent in the last 60 years. It is currently increasing at a rate of 6 percent a year, and that rate is expected to accelerate.

Currently, one in every five American kids is obese. And since obesity is directly linked to diabetes, the target population for diabetic pharmaceuticals now extends clear down to four-year olds. Yes, diabetes is a pharmaceutical company’s dream come true.

What a sad commentary on the American lifestyle! A disease that is purely associated with improper diet and lack of exercise is growing alarmingly. And our answer is more and better drugs, which do nothing to treat the causes and do not even change the progress of the disease and its horrible consequences.

As I said before, pharmaceutical companies are the best marketers in the world -- but don't get caught up in believing that they have the magic bullet for diabetes. That would be a fatal mistake. Diabetes is a disease in which you have to address several underlying factors. 

Muscle Up to Help Control Blood Sugar

First and foremost, the most important factor is to get your weight down. In almost every case of type II diabetes, the body can control blood sugar fluctuations naturally when the obesity problem is taken care of. Obviously, this will require both changes in the diet and at least moderate amounts of exercise.

Exercise provides you with four important benefits. It

- increases lean body tissue
- burns fat
- increases the sensitivity of insulin, enabling the pancreas to produce less,
- and raises the metabolic rate."

Artificial Sweeteners

One final comment before we leave the subject of diabetes. Don’t be fooled into thinking that the use of Sweet and Low, Equal, etc. sweeteners “help” control your blood sugar. If you are a diabetic, the only artificial sweetener you should
use is **stevia**. It is now widely available in health food stores. Here’s an e-mail from the wife of a diabetic to Dr. Williams:

"My husband is diabetic. He drinks 4 or 5 cups of blueberry tea every day. We sweeten it with **stevia**. It keeps his sugar controlled. He started taking the tea steadily about a year ago, and gradually the doctor saw the **good numbers** that my husband recorded for his **sugar reading** each day. His medicine was **decreased by half**, then a few months later, **all**. Stevia does not have the same effect on the pancreas as does sugar, Sweet and Low, or Equal.

*Dorothy D.*"

**From Our Local Newspaper**

Remember my describing the high rates of diabetes among the Mexican-American population of my hometown, San Antonio? Following is an article from the *San Antonio Express-News* by Paul Elizondo, County Commissioner for Precinct 2 in Bexar County (the county that includes San Antonio). He titled it "**Do yourself a favor: Get a diabetes test.**"

“I scheduled a doctor’s appointment because I had this terrible rash that was really ugly. After the doctor ran a blood test, he came in and said, ‘Congratulations, you have diabetes. At last, you’ll have to do what I tell you or there will be consequences!’

That was about four years ago, and the disease has taken its toll on me, particularly on my eyesight.

I have Type 2 diabetes; years ago, it was called adult onset diabetes. In many instances, it can be controlled with the proper diet and exercise, but **my busy schedule makes it difficult**.

I know there are thousands of San Antonians like me who have demanding jobs. My days run long into the night, like when we were working on the contract for the new arena, which required 16- to 18-hour days.

Plus, I have my own band, meaning I work two jobs. I try to walk three miles every other day and eat planned meals, but many days **I just can’t do it**.

These are some of the excuses we conjure up for not changing our lifestyles. But when we look at the potential consequences of diabetes – blindness, stroke, heart and kidney failure and limb amputation – it’s a no-brainer: **Change lifestyle or perish!**
The first step is awareness. San Antonio has a diabetes epidemic, and I urge everybody to take advantage of free screenings today and Saturday.

The screenings are hosted by the Diabetes Alliance of Bexar County. The collaborative is hoping to screen 25,000 people all around town this week. In this city, there are approximately 80,000 people who have diabetes – and they don’t even know it!

The alliance includes the Texas Diabetes Institute, American Diabetes Association and the Juvenile Diabetes Foundation and is dedicated to awareness, education, prevention and treatment of diabetes.

By marshalling their forces and convincing residents to take control of their health, perhaps we can help stem the tide of this deadly disease.

My best advice is to look at the risk factors. Do you have family members with diabetes? Are you Hispanic, Native American, Asian or African-American? Are you overweight? Do you have a bad diet? Do you love sweets and drink too many sodas? Do you drink too much and exercise too little?

Then, my friend, you are a prime candidate for diabetes.

If you love your family and if you love yourself, you need to be screened as soon as possible. There is nothing more insidious to our families than diabetes.

Look at the odds. Are you among the 80,000 walking around who don’t know they have diabetes? Get screened today. Call xxx-xxxx for times and locations.”

Commissioner Elizondo has given you good advice. Remember, it is never too late to begin treating your diabetes with proper diet and exercise. Your miracle immune system will restore your God-given body to normal functioning, if you’ll just give it the support it needs.

God Bless You!!
BACK PROBLEMS

TMS -- An Interesting Mind-Body Connection

Back pain and, to a lesser extent, shoulder and neck pain, are common complaints. Around 80% of the U.S. population has some history of one or the other. It is the first cause of worker absenteeism in this country. It ranks second behind respiratory infections as a reason for a doctor visit. An article in Forbes magazine in August 1986 reported that $56 billion are spent annually to deal with the consequences of back and neck pain. It's much higher now, you can be sure.

Doctors cannot see pain. Thus, theories about what causes back and neck pain are just that -- theories. At best, an operation to "fix" a "slipped disc" in your spine is a guess that it is causing your pain. There is a great deal of evidence that many of the operations done on the spine are unnecessary.

Back in 1985, Dr. Hubert Rosomoff, a well known neurosurgeon and chairman of his department at the University of Miami School of Medicine, published an article titled "Do Herniated Discs Produce Pain?" Dr. Rosomoff did back operations for many years. His conclusions were based on logic as well as his experience. He said that continued compression on a nerve would cause it to stop transmitting pain messages after a short time. The result is numbness. How could the herniated disc then cause continuing pain? His answer. It couldn't.

Chiropractors do "adjustments" on your back. They can't see pain, either. In most cases, in my experience, back pain sufferers who go to chiropractors achieve only temporary relief. The same can be said for massage therapists, Reiki practitioners, Rolfing, Voodoo and....well, you name it.

For me, exercise has been the "magic bullet" which permanently cured my back pain. Possibly, the reduced stress of my present life style contributed to the "cure." I don't know.

My former wife, Marge, had chronic muscle spasms in her shoulders and neck that caused almost unbearable pain. No doctor was able to fix it. A physical therapist gave her some relief, but only temporary. She was under constant stress over the shenanigans of her irresponsible daughter and grandchildren. Her daughter (my stepdaughter) died in September 2000 -- six years after her
mother's death. She was 56, a neurotic with a lifelong history of alcoholism, smoking and obesity.

My experience tells me that the following study of the cause and cure for back pain (and neck and shoulder pain) is pretty close to the real truth. "Tension Myositis Syndrome (TMS)" is the name given to most of these pains by John E. Sarno, M.D. in his book Healing Back Pain -- The Mind-Body Connection. Published in 1991, this book preceded most of the research on the interaction of the mind and body documented by Dr. Sternberg and covered in Booklet #1 on Diet. The first edition of Dr. Sarno's book, in 1984, also preceded Dr. Chopra's inspired insights about the mind-body connection.

What Causes Back and Neck Pain?

Dr. Sarno says the cause is repressed emotions. Further, that the pain acts as camouflage so that you and I don't have to deal with the psychological pain of making these repressed emotions conscious. I can't just dismiss this theory, and I hope you don't either. It is the result of 26 years of treatment of thousands of patients suffering from back and neck pain. Dr. Sarno's experience began as director of outpatient services at the Howard A. Rusk Institute of Rehabilitation Medicine at New York University Medical Center. He says:

"Conventional medical training had taught me that these pains were primarily due to a variety of structural abnormalities of the spine, most commonly arthritic and disc disorders, or to a vague group of muscle conditions attributed to poor posture, underexercise, overexertion and the like.

...The experience of treating these patients was frustrating and depressing; one could never predict the outcome. Further, it was troubling to realize that the pattern of pain and physical examination findings often did not correlate with the presumed reason for the pain. For example, pain might be attributed to degenerative arthritic changes at the lower end of the spine but the patient might have pain in places that had nothing to do with the bones in that area. Or someone might have a lumbar disc that was herniated to the left and have pain in the right leg.

Along with the doubt about the accuracy of conventional diagnoses there came the realization that the primary tissue involved was muscle, specifically the muscles of the neck, shoulders, back and buttocks. But even more important was the observation that 88 percent of the people seen had histories of such things as tension or migraine headache, heartburn, hiatus hernia, stomach ulcer, colitis, spastic colon, irritable bowel syndrome, hay fever, asthma, eczema and a variety of other disorders, all of which were strongly suspected of being related to tension. It seemed logical to conclude that their painful muscle condition

Cancer-Free

Cancer-Free – Your Guide to Gentle, Non-toxic Healing
might also be induced by tension. Hence the Tension Myositis Syndrome (TMS). (Myo means 'muscle;' Tension Myositis Syndrome is defined here as a change of state in the muscle that is painful.)

What do doctors think of this diagnosis? It is unlikely that most physicians are aware of it. I have written a number of medical papers and chapters for textbooks on the subject but they have reached a limited medical audience, primarily physicians working in the field of physical medicine and rehabilitation. In recent years it has become impossible to have medical papers on TMS accepted for publication, undoubtedly because these concepts fly in the face of contemporary medical dogma. For those physicians who might see this book, I would point out that it is more complete than any of the papers I have published and will be useful to them despite the fact it is written for a general audience.

Does lack of general acceptance by the medical "establishment" mean he is wrong? Hardly! No medical pioneer in my limited knowledge has ever been warmly embraced by his/her colleagues.

The primary purpose of this book is to raise the consciousness both inside and outside the field of medicine, because these common pain syndromes represent a major public health problem that will not be solved until there is a change in the medical perception of their cause.

Having stated the purpose of the book, I would be less than candid if I did not report that many readers of its predecessor, Mind Over Back Pain, reported amelioration or complete resolution of symptoms. This substantiates the idea that it is identification with and knowledge of the disorder which are the critical therapeutic factors.

Dr. Sarno's prose sounds like he's written too many medical journal articles. What he is saying is that it works! People, probably many of whom were skeptical when they first read or heard about it, have been cured. Why not you or your loved one or friend?

Here is just one example of one of Dr. Sarno's many thousands of patients:

The patient was a middle-aged woman with a grown-up family; she had been essentially bedridden for about two years when she came to my attention. She had suffered from low back and leg pain for years, had been operated on twice, and had gradually deteriorated to the point where her life was restricted almost entirely to her upstairs bedroom.
She was admitted to the hospital where we found **no evidence** of a continuing structural problem but **severe manifestations of TMS**. And no wonder, for the psychological evaluation revealed that she had endured terrible **sexual and psychological abuse** as a child and that she was in a **rage**, to put it mildly, and had **no awareness of it**. She was a pleasant, motherly sort of woman, the kind that would automatically **repress anger**. And so it **festered** in her for years, always **kept in check** by the severe pain syndrome.

Her recovery was stormy, for as the details of her life came out and she began to acknowledge her **fury**, she experienced a **variety of physical symptoms** -- cardiocirculatory, gastrointestinal, allergic -- but the pain **began to recede**. Group and individual psychotherapy was intense. Fortunately, she was very **intelligent** and grasped the concepts of TMS quickly. As the pain reduced, the staff helped to get her mobile again. Fourteen weeks after admission she went home essentially **free of pain** and ready to resume her life again."

**It's NOT All In Your Mind**

Dr. Sarno is **not** saying, "It's all in your mind." Far from it. He points out that pain can be a **strong warning sign** of real **physical problems**. Your doctor should rule all these out before you begin to suspect that it is TMS.

In the last chapter of his book, Dr. Sarno reprints 10 long letters from his patients. They are **emotionally charged** and very convincing. I do not have room here to quote all 10. I've selected one that is quite **typical**. Remember, Dr. Sarno was doing this work in the **early 1980's**. None of the **scientific data** that today is confirming the mind-body **physical connection** was available. Here's the letter:

"**Dear Dr. Sarno:**

I want to thank you for how much you have helped my health and therefore the quality of my life....

I had been suffering from severe back pain (both upper and lower, including sciatic) for **seven years** at the time I called you. I also had regular severe intestinal cramps, intense sharp pains in my chest; pain in my knees, ankles, elbows, wrists, knuckles and one shoulder.

All this pain, especially the back pain, **severely limited** my ability to work and play. I could not sweep the floor, do dishes, pick up babies (or anything over about three pounds, for that matter), join in sports, etc. Even brushing my hair hurt.
I had been a very strong, active person with a great need to exert myself physically -- which I (and everyone else) blamed as the cause of my back problems.

On the first visit to my doctor, I was told to back off as much activity as possible, to do nothing that hurt, and that probably a lot of things would hurt.

I followed that advice. Over the next seven years, I became an 'expert' on the supposed causes and cures of back pain, but to no avail. I had fourteen sessions of acupuncture, seventeen chiropractic sessions, seventeen 'body balancing' sessions, thirteen rolfing sessions, several physical therapy sessions, used a 'neuro-block TENS unit,' attended 'bad-back exercise class,' joined a health spa -- went swimming and used a Jacuzzi and sauna, received many massages, etc. One doctor thought it might be 'primary fibromyalgia syndrome' and tried putting me on L-Tryptophan and B6.

All these treatments seemed to help a little at the time, but I still continued to suffer incredible pain.

After my conversation with you, I considered seeing a psychotherapist, but I decided to try it without one first. I came to realize that it was not one big underlying problem causing my tension, but instead any little thing in my daily life that I had learned to fear and/or that caused tension, would begin my cycle of pain, more tension, more pain, etc. If the cause was an unresolved psychological conflict, I noticed that most of the time I didn't actually have to resolve it for the pain to go away but instead just be aware that this was the source of my pain. But I do find that now I tend to resolve things more quickly than I did before.

I was so mind-blown and happy over the ability to turn a wrenching spasm into a signal that something must be bothering me (emotionally or mentally) and then dissolve the pain completely within a matter of a minute or less.

It took me four months to get the process under good control, and within less than a year, I was able to say to friends and family, 'Yes, my back is finally cured. I am free of pain!'

At the same time that my back became free of pain, so did every single other body part that I mentioned earlier. Finally I could work and play again like I had not done for seven years. What a relief!

I will always be grateful to you, Dr. Sarno, for having the courage and kindness to do what you've been doing for over twenty years -- helping people become permanently free of disabling pain.
Thank you."

**Ancient History**

Most of us reading the above for the first time will consider this a new idea. **Wrong!** Dr. Sarno points out that Hippocrates himself, 2,500 years ago, advised his **asthmatic patients** to be wary of **anger**.

"In the late nineteenth century the famous French neurologist Jean-Martin Charcot gave new life to the principle of the interacting mind and body when he shared with the medical world his experiences with a group of intriguing patients. Called hysterics, they had dramatic neurological symptoms, like paralysis of an arm or leg, with no evidence of neurological disease. Imagine the effect on his medical audience, however, when he demonstrated that the paralysis could be **made to disappear** when the patient was **hypnotized**! One could not ask for a more convincing demonstration of the mind-body connection."

Dr. Sarno describes the current medical "establishment" as under the thrall of Rene Descartes (1596-1650). Descartes' theories about the **separateness** of mind and body still drive most medical thought **today**. The body is the **purview of physicians** and all their technology. The mind is the **purview of psychologists and psychiatrists**. A significant number of doctors in the U. S. and most of them in Europe and other countries have **grown beyond** this view since 1991, when Dr. Sarno wrote it.

This mindset still persists in many doctors. It has led to reliance on chemical "cures" for mind and body illness. This, of course, **delights** the pharmaceutical companies. Many doctors still **treat symptoms** rather than seeking out the **causes**.

As for "**mind-body interaction,**" most doctors even today consider it folklore or **vooodoo**.

**Confirmation is Here**

As far as acceptance by the medical "establishment", **little has changed** in the twelve years since Dr. Sarno's observation above. You and I are indeed **fortunate**, however. We have available to us **confirmation** of Dr. Sarno's theories in the form of **physical evidence**. Esther Sternberg, M.D. (Booklet #1 above) has documented it in her beautifully written book, *The Balance Within*. Just listen to her **bona fides**. She is Director of the Molecular, Cellular, and Behavioral Integrative Neuroscience Program and Chief of the Section on Neuroendocrine Immunology and Behavior at the National Institute of Mental
Health and National Institutes of Health. Despite Dr. Sternberg's difficulty in printing her title on her business card, we owe her a careful listen. Take another look at the section on her book in Booklet #1 on Diet.

If you have been diagnosed with any of the following, this information on TMS is relevant to you: back, neck or shoulder pain; slipped disc; heartburn; hiatus hernia; ulcers; peptic ulcers; irritable bowel syndrome; spastic colon; constipation; gas; fibromyalgia; allergic rhinitis (hay fever); shingles; rheumatoid arthritis; bursitis; diabetes; lupus erythematosus; multiple sclerosis; heart palpitations; mitral valve prolapse; and arteriosclerosis.

Take Dr. Sarno's book to bed with you. Read it with an open mind. Get up determined to do all you can to overcome the mental/emotional component of your "disease." I'm not belittling the seriousness of your condition. I'm only urging you to try the technique that has worked for so many other patients without the need for chemicals, with all their expense and side effects.

Be well and God Bless You!
